Pitt knew how poor his brother and his brother's family must be. It could not have escaped the notice of such a cool and experienced old diplomatist, that Rawdon's family had nothing to live upon, and that houses and carriages are not to be kept for nothing. He knew very well that he was the proprietor or appropriator of the money, which, according to all proper calculation, ought to have fallen to his younger brother, and he had, we may be sure, some secret pangs of remorse within him, which warned him that he ought to perform some act of justice, or, let us say, compensation, towards these disappointed relations.—*Thackeray, Vanity Fair, ch. xlv.*

Approximate. v. n. [Lat. *approximatus* =

It is the tendency of every dominant system, such
as the Paganism of the ante-Nicene centuries, to

borne by its authority.—*Newman, Development of
Christian Doctrine*, introd.

limited approximations completely answer the in-
tention of geometry?—*Bishop Berkeley, Analyst*,
qu. 53.

Approximate. adj. With a tendency to

= bask.] Bask in the sun. *Rare*.

καρποδοιμενος for some new-coined words, such as
ignore and opine. Cesar, I think, saith that 'verbum

name you one or two, to apricate, susceper, vesti-

ordinary peach.

reperita et primo denarius singulis venundata.'
Pliny, N. H. xv. 11.

Martial alludes to the peach being grafted on the
apricot.

'Villa maternis fueramus Præcocia ramis,
'Nunc in adoptivis Persica cara sumus.'
They were also called *Mæda*, *Armenia*; and Pal-
ladius describes the Armenia or *Præcocia* as a
species of peach. Dioscorides, after speaking of
peaches, says the smaller sort, called *Armenians*, in
Gr. *πρακοκια*, are more digestible.—*Wedgwood, Dic-

Apriori. adv. [Lat. *a* = from, *priori*, ab-
lative case of *prior* = former. — generally
printed as two words.] Correlative of
Aposteriori. (The connection more particu-

of cause and effect. Hence, *a priori* is the
argument from the antecedent cause to the
subsequent, or consequent, effect; from the
law to the instance; from anticipation

rather than from experience: whereas, *à posteriori* is, *mutatis mutandis*, the reverse of this; i.e. argument from effect to the cause; from the individual case to the law; from experience, rather than from anticipation. In the extract, *à priori* is an adjective; *à posteriori* an adverb.)

In the persuasion of a truth, it is lawful to use such *arguments* whose strength is wholly made prevailing by the weakness of him that is to be persuaded. Such as are *arguments* ad hominem, that is, proportionable to the doctrines, customs, usages, belief, and credulity of the man. The reasons are these, because ignorant persons are not capable of such *arguments* as may demonstrate the question, and he that goes about to draw a child to him, may pull him by the long sleeve of his coat, and need not to hire a yoke of oxen.—*Jeremy Taylor, Ductor Dubitantium*, i. 75. (Ord MS.)

Argumentation. s. Reasoning; act of reasoning.

Argumentation is derived from *argumentari*, which means 'argumentis uti'; *argument*, again, *argumentum*—what is assumed in order to argue something—is properly the middle notion in a reasoning—that through which the conclusion is established; and by the Latin rhetoricians it was defined 'probabile inventum ad faciendam fidem.' It is often, however, applied as coextensive with *argumentation*.—*Sir W. Hamilton, Logic*, i. 276.

Argumentation is that operation of the mind, whereby we infer one proposition from two or more propositions premised. Or it is the drawing a conclusion, which before was unknown, or doubtful, from some propositions more known and evident; so when we have judged that matter cannot think, and that the mind of man doth think, we conclude that therefore the mind of man is not matter.—*Watts, Logic.*

Can dialogues in verse be defended? I cannot but think that a great philosophical poet ought always to teach the reader himself as from himself. A poem does not admit *argumentation*, though it does admit development of thought.—*Coleridge, Table Talk.*

Arianism. s. Heresy or sect of Arius.

The alcoran is but a system of the old *Arianism*, ill digested and worse put together, with a mixture of some Heathenism and Judaism. For Mahomet's father was an heathen, his mother a Jewess, and his tutor was Sergius the monk, a Nestorian; which sect was a branch of *Arianism*. These, crudely mixed, made up the farrago of the alcoran. But the prevailing part was *Arianism*.—*Leslie, Truth of Christianity*, p. 129.

Out of this orb, as here of eighty-eight,

The invincible, that cover'd all the main.

B. Jonson, *Masques at Court*.
Armada following armada clearly displayed their
projects for effecting a territorial conquest.—*Sir F. Palgrave*, *History of England and of Normandy*, i. 563.

Every one believed the whole armada to be almost
utterly ruined, and after a thanksgiving and a libation

Armadillo. s. [Sp. *armadillo*.] A singular
scaly quadruped belonging to the Order
Edentata.

A small but very distinct family, intermediate
between the sloths and ant-eaters. The sloths ap-
pear to be a purely herbivorous family, and to be
even incapacitated by other details of their organi-
sation for the capture or destruction of a living
prey; whilst the ant-eaters are not only deprived
of canine, but likewise of molar teeth, consequently
are without teeth of any description, and thus form
the only family of the order Edentata that literally
answers to the name and definition. The ant-eaters
differ from the other two families by the want of
clavicles, and the armadillos by the peculiar nature
of their external covering. Instead of hair, the ar-
madillos are covered with a species of hard bony
crust, very similar in form and appearance to the
plate-armour of the middle ages, from which indeed
these animals have acquired the name of armadillos
—a name of Spanish origin which has been adopted
by English writers.—*English Cyclopædia*, *Natural History*, v. Armadillo.

Her heavenly armful. *Crashaw*, *Poems*, p. 59.

Armhole. s. Cavity under the shoulder.

History*.

described: then that sphere is called an *armillary*
sphere, because it appears in the form of several
circular rings, or bracelets, put together in a due

basal structure that they come from Plagiostomous
fishes, and exemplify in a remarkable manner the effi-
ciency, beauty, and variety of the ancient armoury

It is sometimes used by the Dutch farmers to give a richness of colour to their butter.—*Guthrie, Geography*.

'Tis pointed satire, and the shafts of wit
For such a prize are the only weapons fit:

Would make the *errantest* Wild or Wither write.
Oldham, Satires on the Jesuits.

In 1591, John Ross stated in the pulpit, that the advisers of the king were all traitors, and that the king himself was likewise a traitor. He was also a rebel and a reprobate. . . 'For my own part,' said he, 'I rejected the province offered me as an appendage to my prætorship; whereas Pompey *arrogated* some provinces to himself, and some he bestowed upon his friends.'—*Langhorne, Translation of Plutarch's Lives: Cato the Younger*.

In the mean time let us not presume to *arrogate* the office of pronouncing judgment upon even the least of those who have gone to their account; but it is not less our duty than for our advantage to profit by past experience, and to trace out in causes and effects the profound dispensations of God.—*Gladstone, The State in its Relations with the Church*, ch. vii.

He *arrogated* to himself the right of deciding dogmatically what was orthodox doctrine and what was heresy, of drawing up and imposing confessions of faith, and of giving religious instruction to his people.—*Macaulay, History of England*, ch. i.

Maranta indica, as its specific name implies, furnishes West-Indian *arrow-root*. The *Curcuma angustifolia* of Roxburgh supplies much of the East-Indian *arrow-root*; and some has lately been brought from the Sandwich Islands, which is the production of the *Tacca pinnatifida*.—*Thomson, Dispensatory*, p. 485.

What love, what fidelity, what constancy is there equal to that of a nurse with good wages? They smooth pillows: and make *arrow-root*: they get up at nights; they bear complaints and querulousness: they see the sun shining out of doors and don't want to go abroad; they sleep on arm-chairs, and eat their meals in solitude: they pass long, long evenings doing nothing, watching the embers, and the patient's drink simmering in the jug: they read the weekly paper the whole week through; and Law's Serious Call, or the Whole Duty of Man surfaces them for literature for the year.—*Thackeray, Vanity Fair*.

They sailed back, but found him on his guard, and some actions took place in which they were finally worsted: yet not before they had put the tyrant in such jeopardy, that he was forced to take the precaution of shutting up the wives and children of the other citizens in the *arsenal*, and threatening to set it on fire if any attempt was made in favour of the insurgents.—*Bishop Thirlwall, History of Greece*, ch. xiii.

Arsenic. s. [Gr. ἀρσενικόν = male, masculine, powerful, virile, after the manner of a man.] Metal so called.

Arsenick is a very deadly poison; held to the fire, it emits fumes, but liquidates very little.—*Woodward, On Fossils*.

It is by no means uncommon to find a word which is used to express general characters subsequently become the name of a specific substance in which such characters are predominant; and we shall find that some important anomalies in nomenclature may be thus explained. The term *ἀρσενικόν*, from which the word *Arsenic* is derived, was an ancient epithet applied to those natural substances which possessed strong and acrimonious properties, and as the poisonous quality of *arsenic* was found to be remarkably powerful, the term was especially applied to Orpiment, the form in which this metal most usually occurred.—*Dr. Paris, Pharmacologia, Historical Introduction*, i. 66, 68.

Arsenical. adj. Containing or consisting of arsenic; of the nature of arsenic.

An hereditary consumption, or one engendered by arsenical fumes under ground, is incapable of cure.—*Harvey, Discourse of Consumptions*.
There are *arsenical*, or other like noxious minerals lodged underneath.—*Woodward*.

Arsenious. adj. With an excess of arsenic. *Arsenious* acid, and the salts of lead, bismuth, copper, and mercury, if introduced into the animal organism, except in the smallest doses, destroy life. These facts have long been known, as insulated truths of the lowest order of generalization; but it was reserved for Liebig, by an apt employment of the first two of our methods of experimental inquiry, to connect these truths together by a higher induction, pointing out what property, common to all these deleterious substances, is the really operating cause of their fatal effect.—*Mill, System of Logic*, b. iii. ch. ix. § 1.

Arson. s. [L. Lat. *arsio*, -onis = burning.] Crime of willfully burning.

For the practice of clipping, pernicious as it was, did not excite in the common mind a detestation resembling that with which men regard murder, arson, robbery, even theft. The injury done by the whole body of clippers to the whole society was indeed immense, but each particular act of clipping was a trifle.—*Macaulay, History of England*, ch. xxi.

Art. s. [from Lat. *ars*, *art-is*.]

1. Skill: (the result of habit regulated by rules, as opposed to science which is determined by laws, and as opposed to natural skill, the result of no training at all).

Art is properly an habitual knowledge of certain rules and maxims, by which a man is governed and directed in his actions.—*South*.

Blest with each grace of nature and of art. *Pope*.

Ev'n copious Dryden wanted, or forgot,
The last and greatest art, the art to blot. *Id.*
'Its' (i.e. Logic's) 'most appropriate office, however, is that of instituting an analysis of the process of the mind in reasoning; and in this point of view it is, as has been stated, strictly a science; which, considered in reference to the practical rules above mentioned, may be called the art of reasoning.—*R. Whately, Logic*.

It was a point long keenly mooted by the old logicians, whether logic were a science or an art, or neither or both. The Greek Aristotelians, and many philosophers since the revival of letters, deny it to be either science or art. In more modern times, however, many Aristotelians, all the Ramists, and a majority of the Cartesians maintained it to be an art: but a considerable party were found who defined it as both art and science.—*Sir W. Hamilton, Logic*, i. 9.

Theorists, by an observation of particulars, and by generalizing upon them, attempt to construct a system of scientific propositions with respect to a certain subject; upon which system a set of rules intended for the guidance of practice may be founded. These rules form an art. Many scientific investigations have been conducted, and scientific treatises composed, by persons unpractised in the corresponding art; thus, Aristotle composed a treatise on rhetoric, though not himself an orator and practical rhetorician. Clerk's work on naval tactics is another instance of a scientific treatise by an unprofessional writer. In other cases, scientific inquiries and treatises are due to practitioners, as on medical and physiological subjects.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii. p. 48.

2. Exercise of any art, especially a liberal one, personified.

Meanwhile J. J. went steadily on with his work, no day passed without a line, and fame was not very far off, though this he heeded but little; and *Art*, his sole mistress, rewarded him for his steady and fond pursuit of her.—*Thackeray, The Newcomes*, ii. 116.

3. Cunning; artfulness; artifice.

More matter with less art. *Shakespear, Hamlet*, ii. 2.

B. Truly, I have heard

Of such a chamber.

M. More than heard have I;

For I have seen it.

B. Hast thou? By St. George,

Thou hast an entering art. How gott'st thou in?

M. Sir, by the golden key.

H. Taylor, St. Clement's Eve, iii. 6.

Art. s. [from Lat. *artifex*.] Contriver.

Art and part, when a person is both the contriver of a crime and takes part in the execution, but commonly in the negative, neither *art* nor *part*. From the Lat. *nec artifex nec particeps*, neither contriver nor partaker.—*Wedgwood, Dictionary of English Etymology*.

Arted. adj. Skilled. *Obsolete*.

Those that are thoroughly arted in navigation do as well know the coast as the ocean.—*Felltham, Resolves*.

It hath been counted ill for great ones to sing, or play, like an *arted* musician. Philip asked Alexander if he were not ashamed that he sang so artfully.—*Sylvestre, Du Bartas*, 88. (Ord MS.).

Artérial. adj. Relating to, or contained in, an artery.

As this mixture of blood and chyle passeth through the *arterial* tube, it is pressed by two contrary forces; that of the heart driving it forward against the sides of the tube, and the elastic force of the air, pressing it on the opposite sides of those air-bladders; along the surface of which this *arterial* tube creeps.—*Arbuthnot*.

Adding that after it [the blood] has thus been transferred from the *arterial* vein (that is the pulmonary artery) to the venous artery (that is, the pulmonary vein) it is then diffused from the left ventricle of the heart throughout the arteries (or blood-vessels) of the whole body.—*Craik, History of English Literature*, ii. 133.

There are two oxides of iron, a protoxide and a peroxide. In the *arterial* blood the iron is in the form of peroxide: in the venous blood we have no direct evidence which of the oxides is present, but the considerations to be presently stated lead to the conclusion that it is the protoxide. As *arterial* and venous blood are in a perpetual state of alternate conversion into one another, the question arises, in what circumstances the protoxide of iron is capable of being converted into the peroxide, and vice versa.—*Mill, System of Logic*, b. iii. ch. iii.

Artery. s. [Lat. *arteria*; Gr. ἀρτηρία.]

1. Duct which conveys the blood from the heart to the capillaries: (the opposite of veins, which convey it from the capillaries to the heart).

Out of the heart, from whose pure blood do spring
The vital spirits, which, born in arteries,
Continual motion to all parts do bring.

Article. s. [Lat. *articulus* = joint.]

1. In Grammar. The article in Grammar is not often defined. It is generally stated that such and such words are articles. What makes an article is rarely stated. According to the views of the present writer, exhibited more fully in his *English Language* and elsewhere, the first essential for an article is, that it should be a word which cannot be used by itself, but must always be *joined-on* to another word. On the other hand, it must be capable of being separated, or isolated. It must have an independent existence as a word. This separates *an* and *the* from the *-s* in *father's*, the *-ed* in *moved*, and other ordinary inflections. It must be definitely deducible from some other word, itself capable of an independent existence. *A* in this way = *an*, whilst *an* = *one*. *The*, in like manner, is deducible from the root of *this* and *that*. The word from which it is thus deducible must be a pronoun. In such expressions as *I have written a letter* the original possessive power of *have* is lost. Yet *have* is no article. See *Have*.

It must be demonstrative or numerical. In *this is my hat*, we cannot use *my* by itself and say *this hat is my*. Yet *my* is no article. It must express something connected with the definitude, the indefinitude, or the number of the noun with which it is connected. Thus the means some object, or objects, specially; *a* means some particular though undefined object. If this definition be recognized, *no* and *every* are articles; their construction being that of *the* and *a*. See *No* and *Every*. In the singular number *any* (q.v.) is, if no true article, subarticular. To the question *which will you have?* we answer *only*, when we mean to take more than one. If we ask *which one will you take?* the answer is, not *any*, but *any one*. Hence, the construction is that of *every*. For the full exposition, however, of the doctrine here laid down, the reader is referred to further remarks under *Have*, *Every*, *My*, and *No*.

[It is not usual to look upon the word 'no' as an article; though some grammarians have done so. It is still more uncommon to make an article of 'every.' There is good reason, however, for doing it. All the four words under notice agree in having no separate and independent existence. Whenever they occur they occur in union with a noun or a pronoun. Thus we say, a man, the man, and no man. We can say every one is ready; but we cannot say every is ready. Articles take their name from the circumstance of their being united or jointed to some other word. In many languages they actually combine. Thus (in Danish) *bord* is a table, whilst *bordet* is the table (table-the).—Dr. R. Latham, *Elementary English Grammar*, § 90.]

2. Single clause of an account; particular part of any complex thing.

Laws touching matters of order are changeable by the power of the church; articles concerning doctrine not so.—Hooker.

When time shall serve to shew in articles.

All the precepts, promises, and threatenings of the gospel will rise up in judgment against us; and the articles of our faith will be so many articles of accusation; and the great weight of our charge will be this. That we did not obey the gospel which we professed to believe: that we made confession of the Christian faith, but lived like heathens.—*Archbishop Tillotson.*

You have small reason to repine upon that article of life.—*Swift.*

And thus we are, at last, returned to our old article of advice; that main preliminary of self-study and inward converse, which we should have found so much wanting in the authors of our time.—*Lord Shaftesbury, Characteristics.*

At most, in the immeasurable tide of French speech (which ceases not day after day, and only ebbs towards the short hours of night), may this of the royal sickness emerge from time to time as an article of news.—*Carlyle, French Revolution*, b. i. ch. i.

6. In Journalism. Contribution in a periodical.

'Tis strange the mind, that very fiery particle,
Should let itself be snuffed out by an article.

Byron, Don Juan, xi. 60.

One of the latest instances of skill in putting things which I remember to have struck me, came upon me, where abundance of such skill is to be found—in a leading article of the 'Times.' The writer of that article was endeavouring to show that the work of the country clergy is exceedingly light.—*Recreations of a Country Parson*, ch. i.

'By certain humble contributions of mine to the press,' answered Bayham, majestically. 'Mr. Warrington, the claret happens to stand with you; and exercise does it good, sir.' 'Yes, the articles, trifling as they may appear, have attracted notice.'—*Thackeray, The Newcomes*, ii. 41.

Articles in reviews generally appear with the names of the authors, in France, Germany, and the other continental countries. In England and the United States, reviews are almost always anonymous; but the secrecy of authorship is not so strictly maintained as in newspapers. In either case, an article appearing in a review possesses whatever authority it may derive from the previous character of the periodical work in which it is published.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix.

4. In Zoology. Belonging to the Articulata.

And since we were led from the infusoria to the polypi, because the ciliated larvæ of these resembled the monads, and from the polypi to the aculephæ, because these in their larval state were polypes, so we have now the same indication, from a transitory step in development, of the right track in passing from the annulata to the epizoa; and the succeeding steps will lead us to place these parasites on a higher grade of articulate structure: and not with the entozoa, where Cuvier and Lamarck left them.—*Owen, Lectures on Comparative Anatomy*, lect. xiii.

4. As opposed to Natural in the way of classification.

The diataxis, or plan of the system, may aim at a natural or at an *artificial* system. But no classes can be absolutely *artificial*, for if they were, no assertions could be made concerning them. An *artificial* system is one in which the smaller groups (the genera) are natural, and in which the wider divisions (classes, orders) are constructed by the peremptory application of selected characters (selected, however, so as not to break up the smaller groups). A natural system is one which attempts to make all the divisions natural, the widest as well as the narrowest; and therefore applies no characters peremptorily. Natural groups are best described, not by any definition which marks their boundaries, but by a type which marks their center. The type of any natural group is an example which possesses in a marked degree all the leading characters of the class.—*Whewell, Novum Organon renovatum*, axioms 89–92.

Sir J. Denham.

[We find in Middle Latin the term *ars*, and the derivative *artificium*, applied in general to the implement with which anything is done, and specially to the implements of war, on the same principle that the Gr. *μηχανή*, the equivalent of the Lat. *ars*, gave rise to the word *machina*, a machine, and on which the word *engine* is derived from the Lat. *ingenium*, a contrivance. . . From *ars* seems to have been formed the Fr. verb *artiller*, in the general sense of exercising a handicraft, or performing skilled work, subsequently applied to the manufacturing or supplying with munitions of war. In testimony of the more general sense we find *artilleria*, and thence the Fr. *atelier*, a workshop.—*Wedgwood, Dictionary of English Etymology*.]

They [the Romans] had colleges for augurs and *aruspices*, who used to make their predictions sometimes by fire, sometimes by flying of fowls, &c.—*Howell, Letters*, iii. 23.

Aruspicy. s. Art of prognosticating by inspecting the entrails of the sacrifice.

A flun more senseless than the roguery Of old *aruspicy* and augury. *Butler, Hudibras*, ii. 3.

As. s. [Lat.] Roman pound, consisting of twelve equal parts or ounces. See A ce.

Where twelve divide the *as*, and every one Hath part withouten defalcation.

Verses prefixed to Kynaston's Chaucer.

The *as*, or Roman pound, was commonly used to express any integral sum.—*Sir W. Blackstone*.

As. conj. [A.S. *eall* = all, *sua* = so.]—In this word the import turns upon the latter element, i. e. *so*. This implies likeness, both when standing alone and in composition; as in *such*, &c. From this follow the cognate notions of Equality, or perfect likeness in degree; of Proportion, or likeness in the way of ratio; of Concordance, or agreement in general. This may be for either time or place. More remote is the notion of Consequence. Even here the notion of relation (i. e. in the way of Effect and Cause) is visible.]

1. In the same manner as something else.**a. Agreement in manner in general.**

When thou dost hear I am as I have been, Approach me, and thou shalt be as thou wast.

Shakespeare, Henry IV. Part II. v. 5.

I live as I did, I think as I did, I love you as I did; but all these are to no purpose: the world will not live, think, or love as I do.—*Swift*.

Who then is Paul, and who is Apollon, but ministers by whom ye believed, even as the Lord gave to every man.—*1 Corinthians*, iii. 5.

Their figure being printed,

As just before, I think, I hinted, Alma inform'd can try the case. *Prior*.

The republic is shut up in the great duke's dominions, who at present is very much incensed against it. The occasion is as follows.—*Addison, Travels in Italy*.

b. In degree.

Well hast thou spoke, the blue-eyed maid replies,
Thou good old man, benevolent as wise.
Pope, Homer's Odyssey.

c. In proportion.

As every engine of artificial motion, as it consists of more parts, is in more dangers of deficiency and disorder, so every effect, as it requires the agency of greater numbers, is more likely to fail. Yet what pleasure is granted to man, beyond the gross gratification of sense, common with him and other animals, that does not demand the help of others, and the help of greater numbers, as the pleasure is sublimated and enlarged?—*Johnson, Sermons*, p. 220. (Ord MS.)

d. In character. Under particular consideration as; so far as.

Besides that law which concerneth men as men, and that which belongs unto men as they are men, linked with others in some society; there is a third which touches all several bodies politic, so far forth as one of them have publick concerns with another.—*Hooker, Ecclesiastical Polity.*

The objections that are raised against it as a tragedy, are as follow.—*Gay, Preface to the What d'ye call it?*

When this vicious disposition had been effectually repressed by the terrible chastisement of the Captivity, there remained, as Scripture shows us, a proud and deep misanthropy, which too clearly proves that, in this region of the earth, at least, man, as such, knew nothing of duty or of love to man.—*Gladstone, The State in its Relations with the Church*, ch. ii.

Long accustomed to regard the Pope as the successor of the chief of the apostles, as the bearer of the keys of earth and heaven, they had learned to regard him as the Beast, the Antichrist, the Man of Sin.—*Macaulay, History of England*, ch. i.

e. In time. When, or while.

At either end, it whistled as it flew,
And as the brands were green, so dropp'd the dew;
Infected as it fell with sweat of sanguine hue.
Dryden.

These haughty words Alecto's rage provoke,
And frightened Turnus trembled as she spoke. *Id.*
So the pure limpid stream, when foul with stains
Of rushing torrents, and descending rains,
Works itself clear, and as it runs refines.

Civilisation, just as it began to rise, was met by this blow, and sank down once more.—*Macaulay, History of England*, ch. i.

2. As it were; as if; (in some sort).

As for the daughters of king Edward IV. they thought king Richard had said enough for them; and took them to be but as of the king's party, because they were in his power, and at his disposal.—*Bacon, History of the Reign of Henry VII.*

The squire began nigher to approach,
And wind his horn under the castle-wall,
That with the noise it shook as it would fall.

They all contended to creep into his humour, and to do that, as of themselves, which they conceived he desired they should do.—*Sir J. Hayward.*

Contented in a nest of snow
He lies, as he his bliss did know,
And to the wood no more would go.

So hot th' assault, so high the tumult rose,
As all the Dardan and Argolic race
Had been contracted in that narrow space.
Dryden.

Can misery no place of safety know,
The noise pursues me wheresoe'er I go,
As fate sought only me. *Id., Aurengzebe.*

But some others of a different stamp are beginning to view the connection of Church and State with an eye of indifference, or even of suspicion. These are men dutiful to the State, but more affectionately and intimately cleaving to the Church; men who, though unwilling to regard the two as in any sense having opposite interests, are nevertheless wearied, perhaps exasperated, at the injustice which has been done of late years, or rather during recent generations, by the temporal to the spiritual body.—*Gladstone, The State in its Relations with the Church*, ch. i.

3. Inasmuch as.

He that commanded the injury to be done is first bound; then he that did it; and they also are obliged who did so assist, as without them the thing could not have been done.—*Jeremy Taylor.*

As the ensuing essay relates to matters of opinion, it will be necessary for me, at the outset, without entering upon disputed questions of mental philosophy, to explain briefly what portion of the subjects of belief is understood to be included under this appellation, and what is the meaning of the generally received distinction between matters of opinion and matters of fact.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. i.

4. For example.

A simple idea is one uniform idea, as, sweet, bitter.
—*Watts.*

5. Its use in comparisons is somewhat lax. Its proper antecedent is so; but so, itself,

is little more than as, or rather (as has already been stated) as is, in respect to its etymology, nothing more than so preceded by the prefix *all*, meaning *altogether*, or *only*. Etymologically, then, as is merely an intensive *so*. Hence we may reasonably expect in the syntax of as and so in conjunction, the phenomena of substitution and omission, i. e. as in the place of so, and so omitted altogether.

Sempronius is as brave a man as Cato. *Addison.*

Here we might also say *so brave*; and, if the statement were negative, this is what would most likely be said—i. e. 'Sempronius is not so brave as Cato.'

[As follows adjectives or adverbs of the positive degree, preceded by 'so'—'Be so kind as to come here.' *Than* follows adjectives and adverbs of the comparative degree—'This is sharper *than* that. I see better to-day *than* yesterday.'—*Dr. R. G. Latham, Elementary English Grammar*, § 242, 243.]

With the first as omitted.

Bright as the sun, and like the morning fair.

Here we might say either *so bright as*, or *as bright as*.

6. Answering to such (such is only so in composition, i. e. *so like* = *sulih*, *solih*, *swilk*, and follows, to a great extent, the rules of so).

Is it not every man's interest, that there should be such a governor of the world as designs our happiness, as would govern us for our advantage.—*Archbishop Tillotson.*

7. In a conditional sense: (having so to answer it).

As far as they carry light and conviction to any other man's understanding, so far, I hope, my labour may be of use to him.—*Locke.*

With so understood.

As in my speculations I have endeavoured to extinguish passion and prejudice, I am still desirous of doing some good in this particular.—*Spectator.*

8. That.

The cunningest mariners were so conquered by the storm, as they thought it best with stricken sails to yield to be governed by it.—*Sir P. Sidney.*

He had such a dexterous proclivity, as his teachers were fain to restrain his forwardness.—*Sir H. Wotton.*

The relations are so uncertain, as they require a great deal of examination.—*Bacon.*

In the following the construction belongs rather to the second word of the combination than to as. Still the examples are given as they stand in Johnson.

With *for*. In respect to.

As for the rest of those who have written against me, they deserve not the least notice.—*Dryden, Fables, Preface.*

With *if*.

Answering their questions, as if it were a matter that needed it.—*Locke.*

With *to*.

I pray thee, speak to me as to thy thoughts, As thou dost ruminate; and give thy worst of thoughts

The worst of words. *Shakespeare, Othello*, iii. 3. They pretend, in general, to great refinements, as to what regards Christianity.—*Addison, Travels in Italy.*

I was mistaken as to the day, placing that accident about thirty-six hours sooner than it happened.—*Swift.*

As to speculative questions of science and philosophy, every person ought, as far as his leisure and opportunities for reading and reflection will permit, to attempt to form for himself an independent judgment.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.

With *how*. Colloquial.

As how, dear Syphax? *Addison, Cato.*

With *yet*.

Though that war continued nine years, and this hath as yet lasted but six, yet there hath been much more action in the present war.—*Addison.*

With *though*. As if nevertheless.

For instance, persons who have not cultivated the science of music are often slow to believe that the harmonies of its great masters are more than a display of skill, or than literally a composition, which falls in with the fancy of particular persons, and is taken up by others as a fashion: as though its laws were conventional, and proficiency in it a mere successful application of general talent to a medium of

exhibition accidentally chosen, and as if the satisfaction it affords were felt not spontaneously but upon rule, the mere approbation of those who were witnessing instances of conformity to principles which they had themselves arbitrarily pronounced; that is, they do not believe in the existence of truths or laws about the beauty of sounds in the nature of things, external to particular minds, affecting various persons variously, and mastered by them in various degrees, as the case may be.—*Newman, Development, &c.* ch. i. § 1.

Many constructions of as are ambiguous. They indicate likeness of manner in general. What special manner is meant is often doubtful.

The as, for instance, in the following, means in proportion as. But this we know only from the context. We might write *when* instead.

It very commonly happens, as it does in this instance, that the variations of an effect are correspondent, or analogous, to those of its cause: as the moon moves further towards the east, the high water point does the same: but this is not an indispensable condition; as may be seen in the same example, for along with that high-water point, there is at the same instant another high-water point diametrically opposite to it, and which, therefore, of necessity, moves towards the west as the moon, followed by the nearer of the tide waves, advances towards the east; and yet both these motions are equally effects of the moon's motion.—*Mill, System of Logic*, p. 409.

The same remark applies more or less to the extracts under 1. e. In the one from Addison we are quite free to make the last line say that the water stream grows clear in proportion to its running. In the one from Dryden, the flight of the arrow is the cause of the whistling; and the amount of the latter would be in proportion to the rate of the former. In the other two the notion of proportion is at its minimum.

As, pron. Who; which. (Such an expression as 'The man as goes to market,' is, doubtless, a colloquial vulgarism. Yet the word as is, logically, a pronoun. So it is in the following extract from a classical writer.)

Redeem them from that deluge of debauchery, sin, and wickedness, as is ever ready to cover and overwhelm them.—*Lord Clarendon, Tracts*, 377. (Ord MS.)

Asafetida. s. Inspissated juice of the Ferula Asafetida.

Nigh Whormoot are Duzgun, Laztan-de, and other towns, where is got the best *asafetida* through all the orient: The tree exceeds not our briar in height; but the leaves resemble rose-leaves, the root the radish: though the savour be so offensive to most, the sapor is so good, that no meat, no sauce, no vessel pleases some of the Gussurals' palates save what relishes of it.—*Sir T. Herbert, Travels*, p. 118.

Asbestiform. adj. With the character of Asbestos.

But besides these, there are numerous veins of *asbestiform* minerals, of serpentine, and of soft clayey matter, and some strings of snail.—*Ansted, The Channel Islands*, p. 204.

Instead of prating about Protestant *ascendencies*, Protestant parliaments ought, in my opinion, to think at last of becoming patriot parliaments.—Burke, *Letter to B. Burke, Esq.*

The colleagues of Walpole had, after his retreat, admitted some of the chiefs of the Opposition into the Government, and soon found themselves compelled to submit to the *ascendency* of one of their new allies.—Macaulay, *Essays*, Walpole's *Letters to Sir Horace Mann*.

Towards the end of the sixth century, the Anglo-Saxon power was firmly established in Britain, and a number of petty kingdoms were struggling for *ascendency*.—C. H. Pearson, *The early and middle Ages of England*, ch. viii.

2. One who has influence or superiority.

Conspicuous far; winding with one *ascēt*
Accessible from earth, one entrance high.
Milton, *Paradise Lost*, iv. 544.

Used *metaphorically*.

And still less do the advances of other sciences consist in seizing at once upon the highest generality, and filling in afterwards all the intermediate steps between that and the special instances. On the contrary, as we have seen, the *ascēts* from particular to general are all successive; and each step of this *ascēt* requires time, and labour, and a patient examination of actual facts and objects.—Mill, *System of Logic*.

2. Eminence, or high place.

It is impossible to conceive a contrast more strong or more irreconcilable than the octogenarian Gregory, in his cloister palace, in his conclave of stern *ascētics*, with all but severe imprisonment within conventual walls, completely monastic in manners, habits, views, incorporate spirit, in celibacy, in rigid seclusion from the rest of mankind, in the conscientious determination to enslave, if possible, all Christendom to its inviolable unity of faith, and to the least possible latitude of discipline; and the gay and yet youthful Frederick, with his mingled assemblage of knights and ladies, of Christians, Jews, and Mahomedans, of poets and men of science, met, as it were, to enjoy and minister to enjoyment; to cultivate the pure intellect: where, if not the restraints of religion, at least the awful authority of churchmen, was examined with freedom, sometimes ridiculed with sportive wit.—Milton, *History of Latin Christianity*, b. x. ch. iii.

One question more, and then in peace depart.

No such imputations are countenanced in the discussion which Plato devotes to the doctrine: indeed, if the vindication which he sets forth against himself on behalf of Protagoras, be really *ascribable* to that sophist, it would give an exaggerated importance to the distinction between good and evil, into which the distinction between Truth and Falsehood is considered by the Platonic Protagoras as resolvable.—Grote, *History of Greece*, pt. ii. ch. lxvii.

Ascribe. v. a. [Lat. *ascribo*; from *ad* = to, *scribo* = write.] Carry to account of.

Ascribe it not then to our severity, but to your own sins, that we refuse to admit the Abbot of St. Felix, whom ye call Archbishop of Zara. Although a woman, praised for her complexion, be bound in modesty to gainsay those praises; yet if the fire have given her a good colour, it is not thought pride to refrain contradicting, because the effect being natural to the fire, and requiring no excellent predispositions in the object, to refer those ascriptions to their cause is held to justify the not rejecting them.—*Boyle, Against Customary Swearing*, p. 78.

Came little copses climbing,

Theu bloodless remnant of that royal blood!

Shakespeare, Richard III. i. 2.

To great Lærtos I bequeath
A task of grief, his ornaments of death;
Lest, when the fates his royal *ashes* claim,
The Grecian matrons taint my spotless name.

Pope, Homer's Odyssey.

b. Like many other words which are naturally the names of a collection of objects rather than of any of the individual objects of which the collection is made, *ashes* is generally found in the plural number. In the singular, it is most properly used to denote some particular kind or variety of *ash*, as *ciuder-ash* in opposition to *tobacco-ash*.

In addition to the three essential constituents above-mentioned, most of these materials contain small and variable proportions of sulphur, nitrogen, and inorganic matter, the latter constituting, when the substance is burned, what we call ash. When these substances are heated to redness they undergo decomposition, a considerable quantity of inflammable gases and vapour being evolved, whilst a residue consisting of carbon, or carbon and ash, remains behind in a solid form.—*Ure, Dictionary of Arts, Manufactures, and Mines: Coal*.

Ashlar. s. [see second extract.] Freestones as they come out of the quarry, of different lengths, breadths, and thickness.

Was it wise to quit the bosky verdures of Brienne, and thy new *ashlar* château there, and what it held, for this? Soft were those shades and lawns; sweet the hymns of poetsasters, the blandishments of high-rouged Graces.—*Carlyle, French Revolution*, pt. i. b. iii. ch. vii.

If any inquisitive foreigner could happen to learn that our most superb public edifices—St. Paul's, or York Cathedral, for example—are *ashlar-work*; that is, constructed (as here defined) of stones as they come from the quarry, what an elevated opinion he must form of English architecture! No one, as far as we know, has attempted an etymology of this word, which seems to be confined to the British island: we believe it to be Celtic. The Gaelic is, *clach shrae-thae* (pronounced *shred*), i.e. stone laid in rows—from *shrae*, a row.—*Garnett, Philosophical Essays*, p. 31.

Ashore. adv. [on shore.] On shore; to the shore.

The poor Englishman riding in the road, having all that he brought thither *ashore*, would have been undone.—*Sir W. Raleigh*.

We may as bootless spend our vain command
Upon the enraged soldiers in their spoil,
As send precepts to the Leviathan
To come *ashore*. *Shakespeare, Henry V. iii. 3.*

May thy billows rowl *ashore*
The beryl, and the golden ore. *Milton, Comus*, 932.
Moor'd in a Chian creek, *ashore* I went,
And all the following night in Chios spent.

Addison, Ovid.

Ashtrib. s. Tub to receive ashes.

Or though thou choose an *ash-tub* for thy bed.

Ashy. adj.

1. Ash-coloured; pale; inclining to a whitish grey.

Of have I seen a timely parted ghost
Of *ashy* semblance, meagre, pale, and bloodless.
Shakespeare, Henry VI. Part II. iii. 2.

2. Turned into ashes.

That self-begotten bird
In the Arabian woods embost,
That no second knows nor third,
And lay ere while a holocaust,
From out her *ashy* womb now teem'd,
Revvies, reffourishes, then vigorous most,
When most unactive deem'd.

Milton, Samson Agonistes, 1699.

Ashy-pale. adj. [two words.] Pale as ashes.

Still is he sullen, still he low'rs and frets,
'Twixt crimson shame and anger, *ashy-pale*!

He had no brother; which though it be a comfortable thing for kings to have, yet it draweth the subjects' eyes a little *aside*.—*Bacon*.

Without laying *aside* that dauntless valour which had been the terror of every land from the Elbe to the Pyrenees, the Normans rapidly acquired all, and more than all, the knowledge and refinement which they found in the country where they settled.—*Macaulay, History of England*, ch. i.

3. From the company: (as, to speak *aside*).
He took him *aside* from the multitude.—*Mark*, vii. 33.

Asinine. adj. [Lat. *asininus*, from *asinus* = ass.] Belonging to an ass.

You shall have more ado to drive our dullest and laziest youth, our stocks and stubs, from the infinite desire of such a happy nurture, than we have now to hale and drag our choicest and hopefullest wits to that *asinine* feast of sow-thistles and brambles.—*Milton, Tractate on Education*.

This one act

Of his, to let his wife out to be courted,
And at a price, proclaims his *asinine* nature
So loud, as I am weary of my title to him.

B. Jonson, The Devil is an Ass, l. 6.

'Tis the most *asinine* employ on earth,
To hear them tell of parentage and birth,
And echo conversations dull and dry,
Embellished with 'He said,' and 'So said I.'

Cowper, Conversation, 209.

They petitioned his majesty in the most lowly manner, to commiserate their *asinine* miseries, if not to conclude and end them.—*Translation of Boccacini*, p. 212: 1628.

But to that most rational objection, the sticklers for the scheme of taxation returned this *asinine* answer. They said that the British government had a right to tax the colonists; and that it ought not to be withheld by paltry considerations of expediency from enforcing its sovereign right against its refractory subjects.—*Austen, Province of Jurisprudence defined*.

Their funeral honours claim'd, and *ask'd* their quiet graves.

ask him that flieth, and her that escapeth, and say,
What is done?—*Jeremiah*, xlviii. 19.

Some say, he bid his angels turn askance
The poles of earth, twice ten degrees, and more,
From the sun's axle; they with labour push'd
Oblique the centrick globe.

Milton, Paradise Lost, x. 668:
Aside the devil turn'd
For envy, yet with jealous leer malign
Ey'd them askance, and to himself thus plain'd.

Ibid., iv. 502.
[Perhaps the connection with *scant*, *scanty*, may be illustrated by comparison with *It. scarso*; *cogliere scarso*, to strike obliquely; *scarso*, scarce, scanty, stingy. Du. *schaers*, a razor; *schaers afcheren*, to shave close; *schaers*, close, stingy, hardly. The fundamental idea is that of skimming transversely along a surface, and so moving close to it, as opposed to striking it direct; then through the notion of closeness expressing tightness, scantiness, want. *It. schiancio*, athwart, across, against the grain; *scanzare*, *scansare*, to turn aside, slip aside, walk by; *cansare*, to balk, avoid by going aside or aslope, to step aside.—Florio. Perhaps from *canto*, a side. Piedm. *bescant*, *per bescant*, aslope, the prefix *bes* signifying inequality, irregularity. It is however worth remarking that there is a numerous class of forms related to some of the foregoing in the same way as *It. cambiare* to *cangiare*, to change. Thus *It. aschembo*, parallel with *aschencio*, aslant, *aschembrare*, or *E. to scamble*, with *It. aschinciare*, to go awry; *E. to scam* (to scam) his work, to do it in an insufficient, superficial manner, with *scant*; *skimping*, scanty (said of dress when cut too short or narrow for the person.—Halliwell), with *skimping* (skimp), to give scant measure.—Hall. To this modification must be referred *Gr. skambos*, crooked, Celtic *cam*, crooked, awry, and probably *Icel. skammr*, short.—Wedgwood, *Dictionary of English Etymology*.]

Askant. *adv.* Obliquely; on one side.

At this Achilles roll'd his furious eyes,
Fix'd on the king askant; and thus replies,
O, impudent. —Dryden, *Homer's Iliad*, l.

Since the space, that lies on either side
The solar orb, is without limits wide,

A seat askant, but one diameter:

Lost to the light by that unhappy place,
This globe had laid a frozen lonesome mass.

Sir R. Blackmore.

Asker. *s.* One who asks: (as a petitioner).

Have you
Ere now denied the asker? and now again

All things are now discovered to proceed askew,
the round world and all.—Gayton, *Notes on Don Quixote*, p. 39.

[*Askew*, *Avry*. *Gr. skaios*, *Lat. scævus*, properly oblique, then left, on the left hand; *Icel. skeifr*, Dan. *skier*, *G. scheef*. Perhaps related to *shave*, from the notion of skimming the surface (see *Askance*), and probably connected with *Gr. skalkhos*, unequal, oblique, *skolios*, distorted, (*σκαλλω*, *σκαλενω*, to scrape?) *G. schiel*, oblique, *schielen*, to squint; Du. *schuins*, oblique; *E. squint*; *Icel. skacker*, oblique.—Wedgwood, *Dictionary of English Etymology*.]

If a man watch too long, it is odds but he will fall asleep.—Bacon, *Essays*.

Thus do the tales, to bed they creep,
By whispering winds soon lull'd asleep. —Milton, *L'Allegro*, 115.

The diligence of trade, and noiseful gain,
And luxury more late asleep were lain;
All was the night's, and, in her silent reign,
No sound the rest of nature did invade. —Dryden.
There is no difference between a person asleep and in an apoplexy, but that the one can be awaked and the other cannot.—Arbuthnot, *On the Nature and Choice of Aliments*.

2. **Figuratively.** Dead.

The earth shall restore those that are asleep in her.—2 Esdras, vii. 32.

I would not have you to be ignorant, brethren, concerning them which are asleep, that ye sorrow not even as others which have no hope.—1 Thessalonians, iv. 13.

Aslope. *adv.* [on slope.] With declivity; obliquely.

Set them not upright, but aslope, a reasonable depth under the ground.—Bacon, *Essays*.

Glanc'd on the ground; with labour I must earn
My bread: what harm? Idleness had been worse:

Asparagus affects the urine with a fetid smell, especially if cut when they are white; and therefore have been suspected by some physicians, as not friendly to the kidneys; when they are older, and begin to ramify, they lose this quality; but then they are not so agreeable.—Arbuthnot, *On the Nature and Choice of Aliments*.

Aspect (in the older writers *Aspéct*). *s.* [Lat. *aspectus*.]

Those corpuscles of colour, insinuating themselves into all the pores of the body to be dyed, may *asperate* its superficies, according to the bigness and texture of the corpuscles.—Boyle.

2. That this is used as an English word we have already seen. It is also used as a compound, e.g. *exasperate*. If the catachresis were not inveterate, it might be advantageously restored as a substitute for the word *Aspire*, as applied to the sound of certain letters in Grammar. The distinction between sounds like the *f* in father, the *v* in vat, the *th* in thin, the *th* in there, the *sh* in shine, and the *z* in azure, as compared with that of the so-called lenes (i. e. *p, b, t, a, s, and z*) is Greek. The word by which it is expressed is *δαρύ*, as opposed to *ψιδρύ*. Of *δαρύ* the Latin equi-

valent is *asper*. Yet the English rendering is not *asperate* but *aspirate*, as if the difference were formed by the insertion of the aspirate *h*. Phonetically, however, this is not the case. The true aspirates of *p*, *t*, *k*, are the *ph* in *haphazard*, the *th* in *nuthook*, and the *hh* in *inkhorn*. Whence the confusion? In Latin the Greek *σ* was spelt by *ph*; the Greek *θ* by *th*; the Greek *χ* by *ch*. Hence, the presence of an *h*, though non-existent, was simulated. See *Aspirate*.

A breathing is an *aspirate*; the power of the Greek *σ* is *aspirate*.—Dr. E. G. Latham, *English Language*, pt. iii. ch. v.

Aspergeoire. s. [Fr.] Implement for sprinkling holy water.

c. Of temper. Moroseness; sourness; crabbedness.

Curb that impetuous tongue, nor rashly vain,
And singly mad, *asperse* the sovereign reign.

Swift.
Unjustly poets we *asperse*,
Truth shines the brighter clad in verse.
And here I solemnly protest I have no intention to vilify or *asperse* any one: for tho' everything is copied from the book of Nature, and scarce a character or action produced which I have not taken from my own observations and experience, yet I have used the utmost care to obscure the persons, by such different circumstances, degrees, and colours, that it will be impossible to guess at them with any degree of certainty: and if it ever happens otherwise, it is only where the failure characterized is so minute, that it is a foible only which the party himself may laugh at as well as any other.—Fielding, *Adventures of Joseph Andrews*, preface.

Aspersión. s.

1. Sprinkling.

2. Calumny; censure.

Not casting any *aspersión* on their religion, but ready to maintain my own.—Bishop Hall, *Specialties of his Life*.

The same *aspersions* of the king, and the same grounds of a rebellion.—Dryden.

And if, at present, every candid critic would be ashamed to cast wholesale *aspersions* on the entire body of professional teachers, much more is such censure unbecoming in reference to the ancient sophists, who were distinguished from each other by stronger individual peculiarities.—Grote, *History of Greece*, pt. ii. ch. lxvii.

Asphalte. s. [Lat. *asphaltum*.] Variety, or imitation, of bitumen.

Minto Square, Great Clive Street, Warren Street, Hastings Street, Ochterlony Place, Plassy Square, Assaye Terrace ('Gardens' was a felicitous word not applied to stucco houses with *asphalte* terraces in front so early as 1827)—who does not know these respectable abodes of the retired Indian aristocracy, and the quarter which Mr. Wenham calls the Black Hole, in a word?—Thackeray, *Vanity Fair*, ch. lx.

To see this day?

Addison.

Aspirant. s. Candidate.

I require then in our young *aspirant* to the name and honours of an English senator, that his mind be early and thoroughly seasoned with the principles of virtue and religion.—Bishop Hurd.

In a low state of morals as to sexual intercourse, in an order recruited from all classes of society, not filled by men of tried and matured religion; in an order crowded by *aspirants* after its wealth, power, comparative ease, privileges, immunities, public estimation; in an order superior to, or dictating public opinion (if public opinion made itself heard); in a permanent order, in which the degeneracy of one age would go on increasing in the next, till it produced some stern reaction; in an order comparatively idle, without social duties or intellectual pursuits; in an order not secluded in the desert, but officially brought into the closest and most confidential relations as instructors and advisers of the other sex, it was impossible to maintain real celibacy; and the practical alternative lay between secret marriage, concubinage without the form of marriage, or a looser and more corrupting intercourse between the sexes.—Milman, *History of Latin Christianity*, b. vii. ch. i.

Aspirate. v. a. [Lat. *aspiratus*, from *aspiro* = breathe.] Pronounce with aspiration: (as *horse*, *house*, *hog*).

Evia, saith Clemens, if it be *aspirated* Evia, signifies, in the Hebrew tongue, a female serpent: where the good man calls the Chaldean tongue the Hebrew; for in the Hebrew I do not find such a word for a serpent.—Lightfoot, *Miscellanies*, p. 160.

Aspirate. adj. Uttered with aspiration.

Everything around him, the hours in particular, contributed to confirm his delusion.

To this day, Constantinople and Cairo show what an incredible charm opium: with henbane exerts on the drowsy indolence of the Turk and the fiery imagination of the Arab; and explains the fury with which those youths sought the enjoyment of these rich pastiles (*hashish*), and the confidence produced in them, that they are able to undertake any thing or every thing. From the use of these pastiles, they were called *Hashishin* (herb-eaters), which, in the mouths of Greeks and Crusaders, has been transformed into the word *assassin*; and as synonymous with murder, has immortalized the history of the order in all the languages of Europe.—*Translation of Van Harmer's History of the Assassins*.

the horses taken from the plough, was at work per-

Although Chaucer had already set the example of writing on scientific subjects in the mother tongue by his treatise on the *Astrolobe*—the oldest work in English now known to exist on any branch of science—this department of study was but very little cultivated in England during the present period. Thus men were termed 'mercurial, martial, jovial,' or 'saturnine,' according as their characters were supposed to be determined by the influence of the planets Mercury, Mars, Jupiter, or Saturn. — *Whewell, Novum Organon renovatum*, b. iv. aph. i. § 3.

The opponents of the government began to despair of the destiny of their country; and many looked to the American wilderness as the only *asylum* in which they could enjoy civil and spiritual freedom. — *Macaulay, History of England*, ch. i.

And his last great enterprise, in some respects the most important of all, was to fit out, at an incredible cost, that famous Armada with which he hoped to humble England, and to nix the heresy of Europe in its bud, by depriving the Protestants of their principal support, and of the only *asylum* where they were sure to find safe and honourable refuge. — *Buckle, History of Civilization in England*, ch. i.

Ataxy. s. [Gr. ἀταξία = non-arrangement.] Disturbance; confusion. Rare.

They [the fallen angels] being all embodied spirits, that is, vitally united to matter, they must, of necessity be capable both of pain and pleasure, the sense of which is more or less acute and vigorous according to either the tenuity or grossness of their bodies; and by consequence they are liable and obnoxious to harm and injury from those of their own society; which, considering the mischievousness of their natures and dispositions, (each one's particular lusts being the grand rule and measures of his actions,) would certainly breed an infinite ataxy and confusion amongst them, and at last the ruin and destruction of their kingdom, if not prevented by some external restraint and discipline.—*Halliwel, Melampusæa*, p. 16.

Three ways of church-government I have heard of, and no more; the Episcopal, the Presbyterian, and that new-born bastard Independency: 'Non datur

Atheling. s. One of noble or royal descent: (a proper, rather than a common, name).

[In the former editions *Adeling*; in many other works *Ætheling*; in some *Etheling*. However, the general adjunct to that

Edgar, whom the Norman Conquest threw out of his succession to the English Crown, is *Atheling*. The root is *æpel*, or *edel* = noble. The termination *-ing* is more important. In A.S. it is as truly patronymic as *-ōnes* is in Greek. In the Bible translation the son of Elisha is called *Elishing*. In the Anglo-Saxon Chronicle occur such genealogies as the following:—'Ida was Eopping, Eoppa Esing, Esa Inging, Inga Angenwiting, Angenwit Alocing, Aloc Beonocing, Beonoc Branding, Brand Bældægging, Bældæg Wódening, Wóden Friðowulfing, Friðowulf Finning, Finn Godwulfing, Godwulf Geating'—Ida was the son of Eoppa, Eoppa of Esa, Esa of Inga, Inga of Angenwit, Angenwit of Aloc, Aloc of Beonoc, Beonoc of Brand, Brand of Bældæg, Bældæg of Wóden, Wóden of

Friðowulf, Friðowulf of Finn, Finn of Godwulf, Godwulf of Geat.—In Greek this would be 'Ida ὁ υἱ Ἐοππίδης, Ἐοππὰ Ἡσέδης, Ἡσὰ Ἰγγέδης, Ἰγγὰ Ἀγγενωτίδης, &c. In like manner, *Edgar Atheling* means *Edgar of the family of the nobles*.

The plurals of these forms in *-ing* have commanded attention from their prominence in the Anglo-Saxon charters, as the names of places. Through the *Codex Diplomaticus* we learn that the following districts (along with many others), of which the names now end in the simple singular syllable *ing*, originally ended in the plural form *-ing-as*. Thus

Barking	in	Essex	was	Bercingas.
Bocking	"	Essex	"	Bocingas.
Ditchling	"	Sussex	"	Diecingas.
Docking	"	Norfolk	"	Doccingas.
Malling	"	Kent	"	Mallingas.
Reading	"	Berks	"	Readingas.
Tarring	"	Sussex	"	Terringas.

In a few cases, however, the *as*, in the form *s*, is retained at the present time, e. g.

Barlings	in	Lincolnshire.
Bealings	"	Suffolk.
Hastings	"	Sussex.
Lillings	"	Yorkshire.]

Atheolôgian. s. One who is the opposite to a theologian.

Atlas, in architecture, is a name given to those whole or half figures of men, sometimes used instead of columns or pilasters to support any member in architecture; they are sometimes called telamones. *Atlas*, in matters of literature, denotes a book of universal geography, containing maps of all the known parts of the world.—*Complete Dictionary of Arts and Sciences*.

Atmologist. *s.* One who studies atomology.

The *atmologists* of the last century were aware that the vapour which exists in air in an invisible state may be condensed into water by cold; and they had noticed that there is always a certain temperature, lower than that of the atmosphere, to which if we depress bodies, water forms upon them in fine drops.—*Whewell, Novum Organon renovatum*; b. iii. ch. ix. § 8.

Atomology. *s.* [Gr. *ἄτμος* = vapour.] Science of vapour.

But besides these collections of principles which regard heat by itself, the relations of heat and moisture give rise to another extensive collection of laws and principles, which I shall treat of in connexion with

Drayton, Elegies, i. (Ord MS.)

Atómic. *adj.* Relating to atoms; consisting of atoms.

The struggles by which philosophers attained a right general conception of plane, of circular, of elliptical polarization, were some of the most difficult steps in the modern discoveries of optics. A conception of the *atómic* constitution of bodies, such as shall include what we know, and assume nothing more, is even now a matter of conflict among chemists.—*Whewell, History of Scientific Ideas*.

But the moment we avail ourselves of it for practical purposes, we find that in its action it is warped by other laws, such as those concerning the friction of air, and the different density of the bodies on which we operate, arising from their chemical composition, or, as some suppose, from their *atómic* arrangement.—*Buckle, History of Civilization in England*, vol. i. ch. i.

Or he pities his long, clammy, attenuated fingers. He compassionates himself all over; and his bed is a very discipline of humanity, and tender heart.—*C. Lamb, Last Essays of Elia, The Convollescent.*

2. Lessen in point of number.

I come now to the Mahometans; the modernest of all religions, and the most mischievous and destructive to the church of Christ; for this fatal sect hath justified her out of divers large regions in Africk, in Tartary, and other places, and attenuated their number in Asia.—*Howell, Letters*, ii. 10.

Attic. s. [see first extract.] Upper story of a house.

[The word 'attic' is found also in French, as a term of architecture, in the form *attique*; but with a meaning somewhat different from that which it has in English. I do not believe that a satisfactory etymology for this word can be found out, with the material we possess, from any of the European languages; but the close resemblance it bears to the Sanskrit word *at'aka* (in its modern pronunciation *attak*) leaves little doubt, in my opinion, that the word *attic* may have been borrowed from the Hindoos in a direct way, especially if we consider that

A T T I

the word, in its architectural sense, is not, to be found in the oldest English dictionaries. *Attaka* is, in Sanskrit, a pleonastic form of *at'aka*, and both meant a room on the top of the house.

The highest room of an Indian house being that on the flat roof, and that of a European building being that under the roof, the difference of the respective meanings of *at'aka* and *attic* would be merely an apparent one. Through what channel this word has come into the English language, I am unable to say, at least for the present.—*Goldstucker, Transactions of the Philological Society*, 1854.]

Nor deal (thank God for that!) in mathematics.

every atom, and attracts the minutest particle to some peculiar object; search this universe, from its base to its summit, from fire to air, from water to earth, from all below the moon to all above the celestial spheres, and thou wilt not find a corporeal destitute of that natural *attractability*.—*Sir W. Loadstones and touched needles, laid long in quicksilver, have not omitted their *attraction*.—*Sir T. Browne, Vulgar Errors*.

Attraction may be performed by impulse, or some other means; I use that word, to signify any force by which bodies tend towards one another.—*Sir I. Newton, Opticks*.

To Boerhaave is usually assigned also the credit of introducing the word 'affinity' among chemists; but I do not find that the word is often used by him in this sense; perhaps not at all. But however this may be, the term is, on many accounts, well worthy to be preserved, as I shall endeavour to show. . . . The term *attraction*, having been recommended by Newton as a fit word to designate the force which produces chemical combination, continued in great favour in England, where the Newtonian philosophy was looked upon as applicable to every branch of science. In France, on the contrary, where Descartes still reigned triumphant, *attraction*, the watch-word of the enemy, was a sound never uttered but with dislike and suspicion. In 1718 (in the notice of Geoffroy's Table), the Secretary of the Academy, after pointing out some of the peculiar circumstances of chemical combinations, says, 'Sympathies and *attractions* would suit well here, if there were such things.' . . . And at a later period, in 1731, having to write the eulogy of Geoffroy after his death, he says, 'He gave, in 1718, a singular system, and a Table of Affinities, or relations of the different substances in chemistry. These affinities gave uneasiness to some persons, who feared that they were *attractions* in disguise, and all the more dangerous in consequence of the seductive forms which clever people have contrived to give them. It was found in the sequel that this scruple might be got over.' . . . This is the earliest published instance, so far as I am aware, in which the word 'affinity' is distinctly used for the cause of chemical composition; and taking into account the circumstances, the word appears to have been adopted in France in order to avoid the word *attraction*, which had the taint of Newtonianism.—*Whewell, History of Scientific Ideas*.

The idea of chemical affinity, as implied in elementary composition, involves peculiar conceptions. It is not properly expressed by assuming the qualities of bodies to resemble those of the elements, or to depend on the figure of the elements, or on their *attractions*. . . . *Attractions* take place between bodies, affinities between the particles of a body. The former may be compared to the alliances of states, the latter to the ties of family.—*Ibid*.

Attractive. adj. With a tendency, or with the power, to attract anything; inviting; alluring; enticing.

not improbable but there may be more *attractive* powers than these.—*Sir I. Newton*.

Just so, if I say that the *attractive* spirit or the *attractive* cord, as Linus calls it, or the *attractive* force, as some philosophers of the day, is an immaterial principle superadded to matter, whereby the attractions in nature are performed; no notion or meaning can possibly be joined with these words. To this head also belong the natural sympathy and antipathy of plants; the Band of Right or Law (vinculum juris) used in the definition of obligation by civilians; the principle of evil of the Manchians.—*Translation from the Logic of Wolff*, from *Sir W. Hamilton, Logic*, i. 186.

Drayton, Moses, 1578. (Ord MS.)

Attractiveness. s. Attribute suggested by *Attractive*.

Upon the observing the *attractiveness* of hot iron, it was queried, whether the same thing might not be done with a wood coal.—*Bishop Sprat, History of the Royal Society*, iv. 268.

There were then the same incentives of desire on the one side, the same *attractiveness* in riches.—*South, Sermons*, vi. 293.

Attractor, or Attractor. s. That which, or one who, attracts.

If the straws be in oil, amber draweth them not: oil makes the straw to adhere so, that they cannot rise unto the *attractor*.—*Sir T. Browne, Vulgar Errors*.

They are true *attractors* of love.—*Whitlock, Manners of the English*, p. 343.

Attrahent. s. [Lat. *attrahens, -entis*, pres. part. of *attraho* = draw to.] That which draws. *Rare*.

Our eyes will inform us of the motion of the steel to its *attrahent*.—*Glanville, Sceptis Scientifica*.

Attrap. v. a. Invest with trappings; clothe; dress. *Rare*.

For all his armour was like salvage weed
With woody moss bedight, and all his steed
With oaken leaves *attrapt*.

Spenser, Faerie Queen, iv. 4. 39.

Attributable. adj. Capable of being, or liable to be, ascribed or attributed.

Much of the origination of the Americans seem to be *attributable* to the migrations of the Seres.—*Sir M. Hale, Origination of Mankind*.

But the defect is visible positively in some men, and only negatively in others. The first offend you by habits and modes of thinking and acting directly *attributable* to their private education; in the others, you only regret that the freedom and facility of the established and national mode of bringing up is not added to their good qualities.—*Colebridge, Table Talk*, p. 223.

One writer discovered a more curious, but less disputable ground of satisfaction in the reflection that Nelson, as may be inferred from his name, was of Danish descent, and his actions, therefore, the Danes argued, were *attributable* to Danish valour.—*Southey, Life of Nelson*, p. 149.

To this, and to the influence of his relations, the decision may have been partly *attributable*.—*C. H. Pearson, The early and middle Ages of England*, ch. xxxiii.

Dr. John Hunter has advanced the opinion that hybernation, although a result of cold, is not its immediate consequence, but is *attributable* to that deprivation of food and other essentials which extreme cold occasions, and against the recurrence of which nature makes a timely provision by the suspension of her functions.—*Sir J. E. Tennent, Ceylon*, pt. ii. ch. iv.

Attribute. v. a. Impute; ascribe.

Right true: but faulty men use oftentimes

ATTR

To *attribute* their folly unto fate.

Spenser, Faerie Queen, v. 4. 28.
To their *very* bare judgement somewhat a reasonable man would *attribute*, notwithstanding the common ineptitudes which are incident unto our nature.—*Hooker*.

We *attribute* nothing to God that hath any repugnancy or contradiction in it. Power and wisdom have no repugnancy in them.—*Archbishop Tillotson*.

I have observed a Campania determine contrary to appearances, by the caution and conduct of a general, which were *attributed* to his infirmities.—*Sir W. Temple*.

The imperfection of telescopes is *attributed* to spherical glasses; and mathematicians have propounded to figure them by the conical sections.—*Sir I. Newton, Opticks*.

Attribute. s. [Lat. *attributum*, part. of *attribuo* = give, or attach, to anything.] That which is attributed to another; quality; property; character.

a. In general.

Power, light, virtue, wisdom, and goodness, being all but *attributes* of one simple essence, and of one God, we in all admire, and in part discern.—*Sir W. Raleigh*.

They must have these three *attributes*; they must be men of courage, fearing God, and hating covetousness.—*Bacon*.

His sceptre shows the force of temporal power, The *attribute* to awe and majesty:
But mercy is above the scepter'd sway,
It is an *attribute* to God himself.

Shakespeare, Merchant of Venice, iv. 1.

It takes
From our achievements, though perform'd at height,
The pith and marrow of our *attribute*.

Id., Hamlet, i. 4.

Your vain poets after did mistake,

Who every *attribute* a god did make.

Dryden.

All the perfections of God are called his *attributes*; for he cannot be without them.—*Watts, Logic*.

The sculptor, to distinguish him, gave him, what the metallists call his proper *attributes*, a spear and a shield.—*Addison*.

b. In Logic. Quality, quantity, or relation of a substance: (to which substance it is the *correlative*).

Logicians have endeavoured to define Substance and *Attribute*: but their definitions are not so much attempts to draw a distinction between the things themselves, as instructions what difference it is customary to make in the grammatical structure of the sentence, according as we are speaking of substances or of *attributes*. . . . An *attribute*, say the school logicians, must be the *attribute* of something; colour, for example, must be the colour of something; goodness must be the goodness of something; and if this something should cease to exist, or should cease to be connected with the *attribute*, the existence of the *attribute* would be at an end. A substance, on the contrary, is self-existent; in speaking about it, we need not put of after its name. A stone is not the stone of anything; the moon is not the moon of anything, but simply the moon. Unless, indeed, the name which we choose to give to the substance be a relative name; if so, it must be followed either by of, or by some other particle, implying, as that proposition does a reference to something else: but then the other characteristic peculiarity of an *attribute* would fail: the something might be destroyed, and the substance might still subsist. . . . This is the nearest approach to a solution of the difficulty, that will be found in the common treatises on logic. It will scarcely be thought to be a satisfactory one. If an *attribute* is distinguished from a substance by being the *attribute* of something, it seems highly necessary to understand what is meant by of: a particle which needs explanation too much itself to be placed in front of the explanation of anything else. And as for the self-existence of substances, it is very true that a substance may be conceived to exist without any other substance, but so also may an *attribute* without any other *attribute*; and we can no more imagine a substance without *attributes* than we can imagine *attributes* without a substance. . . . From what has already been said of substance, what is to be said of *attribute* is easily deducible. For if we know not, and cannot know, anything of bodies but the sensations which they excite in us or others, those sensations must be all that we can, at bottom, mean by their *attributes*; and the distinction which we verbally make between the properties of things and the sensations we receive from them, must originate in the convenience of discourse rather than in the nature of what is denoted by the terms. *Attributes* are usually distributed under the three heads of quality, quantity, and relation.—*J. S. Mill, System of Logic*, b. i. ch. iii. § 6-9.

Attribution. s. General aggregate of qualities ascribed; designation; commendation.

If speaking truth,

In this fine age, were not thought flattery.

Such *attribution* should the Douglas have,

As not a soldier of this season's stamp

Should go so general current through the world.

Shakespeare, Henry IV. Part I, iv. 1.

We suffer him to persuade us we are as gods, and

never suspect these glorious attributions may be no more than flattery.—*Dr. H. More, Decay of Christian Piety.*

Honour considered, according to the acknowledgement or attribution of it in the persons honouring.—*Bishop Wilkins, Principles and Duties of Natural Religion*, ii. 6.

The attribution of prophetic language to birds was common among the orientals.—*T. Warton, History of English Poetry*, i. diss. 1.

The attribution of every false utility to logic has arisen from the erroneous opinions held in regard to the object of the science.—*Sir W. Hamilton, Logic*, i. 34.

Of contradictory attributions we can only affirm one of a thing; and if one be explicitly affirmed, the other is implicitly denied. A either is or is not. A either is or is not B.—*Ibid.* i. 34.

Among the deaths in our obituary for this month, I observe with concern, 'At his cottage on the Bath road, Captain Jackson.' The name and attribution are common enough; but a feeling like reproach persuades me, that this could have been no other in fact than my dear old friend, who some five-and-twenty years ago rented a tenement, which he was pleased to dignify with the appellation here used, about a mile from Westbourn Green.—*Lamb, Last Essays of Elia, Captain Jackson.*

Attributive. *adj.* Chiefly in *Logic*. Of the nature of an attribute.

When a term applied to some object is such as to imply in its signification some 'attribute' belonging to that object, such a term is called by some of the early logical writers 'connotative'; but would perhaps be more conveniently called 'attributive.' It 'connotes,' i.e. 'notes along with' the object (or implies) something considered as inherent therein; as 'The capital of France;' 'The founder of Rome.' The founding of Rome, is, by that appellation, 'attributed' to the person to whom it is applied.—*Whately, Logic*, b. ii. ch. x. §. 1.

Archbishop Whately, who in the more recent editions of his 'Elements of Logic' has aided in reviving the important distinction treated of in the text, proposes the term 'Attributive' as a substitute for 'Connotative.' The expression is, in itself, appropriate; but, as it has not the advantage of being connected with any verb, of so markedly distinctive a character as 'to connote,' it is not, I think, fitted to supply the place of the word connotative in scientific use.—*Mill, System of Logic*, b. i. ch. iii. §. 6. note.

Attributive. *s.* Chiefly in *Grammar*. Term applied to words denoting an attribute; especially adjectives.

In abstract nouns [such as whiteness from white, goodness from good], as also in the infinitive modes of verbs, the attributive is converted into a substantive.—*Harris, Hermes*, i.

The attributives hitherto treated, that is to say, verbs, participles, and adjectives, may be called attributives of the first order.—*Ibid.*

Attrite. *adj.* [Lat. *attritus*, part. from *at-tero* = wear down.]

1. Ground; worn by rubbing. *Rare.*

Or by collision of two bodies grind
The air attrite to fire.

Milton, Paradise Lost, x. 1073.

2. Worn in spirit; penitent. See under *Attrition*, 2.

By virtue of the keys, the sinner is instantly of attrite made contrite, and thereupon as soon as he hath made his confession, he presently receiveth his absolution; after this, some sorry penance is imposed, &c.—*Archbishop Usher, Religion of the ancient Irish and Britons*, ch. v.

Suppose a man to have lived in a course of wickedness for fifty or sixty years; and, being now upon his death-bed, to be attrite for his sins, that is, heartily to grieve for them, &c.—*Bishop Bull, Works*, i. 18.

Attrition. *s.*

1. Act of wearing things, by rubbing one against another; state of being worn.

This vapour, ascending incessantly out of the abyss and pervading the strata of gravel, and the rest, decays the bones and vegetables lodged in those strata; this fluid, by its continual attrition, fretting the said bodies.—*Woodward*.

The change of the aliment is effected by attrition of the inward stomach, and dissolvent liquor, assisted with heat.—*Arbuthnot, On the Nature and Choice of Aliments*.

'Omnia de lite,' opposing wit to wit, wealth to wealth, strength to strength, fortunes to fortunes, friends to friends, as at a sea-fight we turn our broadsides, or [as] two millstones with continual attrition, we fire ourselves, or break another's backs, and both are ruined and consumed in the end.—*Burton, Anatomy of Melancholy*, p. 435.

Some exhalations shut up in the bowels of the earth, which either by their own nature, or by their violent motion and agitation, or attrition upon rocks, do gather heat, and so impart it to the waters.—*Hovell, Letters*, i. 6.

2. Grief for sin, arising only from the fear of punishment; lowest degree of repentance.

Nor is it necessary to this absolution, that they should be contrite, or heartily sorry; for attrition, with auricular confession, shall pass in stead of contrition; that is, in effect, if they be but sorry for the penance, though they be not sorry for the sin.—*Wallis, Sermons*, p. 43.

They [Papists] equivocate with us in the term of contrition, and make a distinction thereof into perfect and imperfect. The former of these is contrition properly; the latter they call attrition, which howsoever in itself it be not true contrition, yet when the priest, with his power of forgiving sins, interposeth himself in the business, they tell us that 'attrition by virtue of the keys is made contrition.'—*Archbishop Usher, Answer to a Jesuit's Challenge*, p. 105.

Where are those pandars of sin, the Romish casuists, that teach the least measure of sorrow, even mere attrition, is enough for a penitent!—*Bishop Hall, Remains*, p. 164.

Attune. *v. a.* Put in tune; make tuneful; make musical.

Airs, vernal airs,
Breathing the smell of field and grove, attune

Auburn. *adj.* [?] Brown with a shade of red; of a rich chestnut colour: (generally applied to hair or feathers).

Fr. *kalbran*, *albran*; Sp. *halbrant*, *albrant*, *albran*, a wild duck in its first year, or when moulting, a teal or pochard, the last of which is conspicuous for a bright chestnut head and neck. Fr. *albremer*, to hunt the young wild duck or the old one when she moults. From *halberente*, *Leduchat*; G. *halbente*, the Plotus anomalipes. (Adelung.) It must be remembered that sporting occupied a much more important place in the thoughts of our ancestors than with ourselves, and they were proportionally better acquainted with the beasts of chase. It is certain that the aspect of the bird was sufficiently familiar with the French to give rise to the metaphor *halbrement*, heavy-looking, drooping as a moulting duck, or a ragged hawk. (Cotgr.)—*Wedgwood, Dictionary of English Etymology*.] See *Brent-Goose*.

Her hair is auburn, mine is perfect yellow.

Shakespeare, Two Gentlemen of Verona, iv. 4. The first [sign] is to have his hair auburn, a colour between white and red, [or, 'between white and saffron colour,' as he afterwards says,] and that passing from age to age, they ever become more golden.—*Triall of Men's Wits*, p. 243: 1594.

He's white hair'd,
Not wanton white, but such a manly colour,
Next to an auburn.

Wholesome, of deathless fame. *J. Phillips, Cider*

After his conscience has worn off those restrictions, and becomes hardened and steel'd with custom in sinning, [he] may lash on furiously and audaciously, with an high hand and bare face, against the grudges of conscience, the terrors of God, and the shame of the world; till at last he ends a wretched course in irrevocable perdition; unless God in mercy steps in, and by a potent over-ruling hand of conviction rebukes the rage of his corruption, and says, thus far it shall come, and no further.—*South, Sermons*, ix. 189.

Audaciousness. *s.* Attribute suggested by Audacious; impudence.

In the siege of Paris, they were grown to that audaciousness as to persuade the people there, that the thunder of the pope's excommunications had so blasted the heretics, that their faces were grown all black and ugly as devils, their eyes and looks ghastly, &c.—*Sir E. Sandys, State of Religion*.

English judges held assizes in Scotland. Even that stubborn church, which has held its own against so many governments, scarce dared to utter an *audible* murmur.—*Macaulay, History of England*, ch. i.

They poised themselves on their shining purple wings, as they made the first lodgement in the wood, enlivening the work with an uninterrupted hum of delight which was *audible* to a considerable distance. *Sir J. E. Tennent, Ceylon*, pt. ii. ch. vi.

Were it reason to give men *audience*, pleading for the overthrow of that which their own deed hath ratified?—*Hooker*.

According to the fair play of the world,
Let me have *audience*: I am sent to speak,
My holy lord of Milan, from the king.

The same difference of feeling, I think, attends us between entering an empty and a crowded church. In the latter it is a chance but some present human frailty—an act of inattention on the part of some of the *auditory*—or a trait of affectation, or worse, vain-glory on that of the preacher—puts us by our best thoughts, disharmonising the place and the occasion.—*Lamb, Last Essays of Elia, Blakesmoor in H—shire*.

Augustan. *adj.* Like that which appertained to Augustus: (especially applied to an age in which literature was encouraged).

The skill with which this is narrated takes us back to the times of the authors that we have known from the first dawning of our literary aspirations; to Virgil, to Horace, to Tibullus, to Pollio and Mæcenas, to all the poets and poetsasters of the *Augustan* era. It shows that the writer was no mere pedant; and that his learning was warmed with the genuine feeling of antiquity. AURI AUGMENTATIVE AURIFEROUS

would occupy an important place in the office where the daily dole of charity was dispensed, the association seems to have led to the use of *aumry* or *ambry*, as if it were a contraction for *almonry*, from which, as far as the sound is concerned, it might very well have arisen. And, *vice versa*, *almonry* was sometimes used in the sense of *armarium*, *almarium*, a cupboard.—*Wedgwood, Dictionary of English Etymologies*.]

Aureola. *s.* [Lat.] See extract.

[*Aureola*, though adopted at an early day into the language, and a word familiar to our old divines, is not in any of our dictionaries. Let us, however, suppose it there, and it is evident that the following citation from Donne should accompany it: 'Because in their translation, in the Vulgate edition of the Roman Church, they [the Roman Catholics] find in Exodus xxv, 23, that word Aureolam, 'Facies coronam aureolam,'—Thou shalt make a lesser crown of gold,—out of this diminutive and mistaken word they have established a doctrine that, besides those coronæ aureæ, those crowns of gold, which are communicated to all the saints from the crown of Christ, some saints have made to themselves and produced out of their own extraordinary merits certain *aureolas*, certain lesser crowns of their own. . . . And these *aureolas* they ascribe only to three sorts of persons, to virgins, to martyrs, to doctors.' Let me here observe, as a curious phenomenon of French scholarship, and an evidence that such a quotation as this would not be superfluous, that Didron, in his really valuable book, 'Iconographie Chrétienne,' p. 109, makes *aureola* a diminutive of 'aura,' a breath, this *aureola* being so called, as he informs us, from its airy wavy character: not to say that he is otherwise curiously astray on what the *aureola* in christian art is, and what are its relations to the nimbus.—*Donne, Sermons*, 73; and Trench, *On some Deficiencies in English Dictionaries*.]

A great number of physicists have supposed that a certain connexion exists between the great apparitions of comical meteors and the *aurora borealis*: but the concurrence of the two phenomena has rarely been observed under such decided circumstances as to justify us in admitting it as a demonstrable fact.—*Arago, Popular Astronomy*, ii. 511.

Autarchy. s. [accent doubtful; meaning doubtful also.—In the previous editions the meaning given to the word is *self-sufficiency*.

On the other hand, the spelling is with *ch* = the Greek χ . But the Greek for suffice, or be sufficient, is $\alpha\rho\chi\omega$; with α rather than χ . Meanwhile $\alpha\rho\chi\omega$ (with the χ) = rule or govern. What is meant? This can only be learned by inference; unless, indeed, there are means of knowing historically what the author actually intended. Johnson's interpretation is evidently that which he considers the author himself supplies. If so, the spelling is wrong. But the conjunction which the author uses is *and*, not *or*. Hence we infer that he meant something different from self-sufficiency, i. e. *self-government*. If so, he has escaped a tautology, and the spelling is right. What was really meant is a matter for the reader to determine for himself. The editor thinks that he *does* use a tautology, and that he spells his word *autarchy* inaccurately. To a writer who thought like a Greek scholar and meant to say self-government, the word *autonomy* would probably have presented itself.] *Rare*.

It may as well boast an *autarchis* and self-sufficiency.—*Valentine, Four Sermons*, p. 10: 1635.

Auxiliary. adj.

1. Same as Auxiliar; assistant.

In almost all languages, some of the commonest nouns and verbs have many irregularities; such are the common auxiliary verbs 'to be' and 'to have,' 'to do' and 'to be done,' &c. — *Watts*.

2. In Grammar. Performing the work of certain Latin, Greek, and other inflections.

[The auxiliary verbs may be classified upon a variety of principles. The following, however, are all that need here be applied.]

According to their inflectional or non-inflectional powers. — Inflectional auxiliaries are those that may supersede or be superseded by an inflection. Thus — *I am struck* — the Latin *perior*, and the Greek *verrouai*. These auxiliaries are in the same relation to verbs that prepositions are to nouns. The chief inflectional auxiliaries are:—

1. *Have*; equivalent to an inflection in the way of tense, *I have bitten* = *mo-mordi*.
2. *Shall*; ditto, *I shall call* = *voc-abo*.
3. *Will*; ditto, *I will call* = *voc-abo*.
4. *May*; equivalent to an inflection in the way of mood, *I am come that I may see* = *venio ut vid-eam*.
5. *Be*; equivalent to an inflection in the way of voice, to be beaten = *verberari*, *verbe-da*.
6. *Am, art, is, are*; ditto. Also equivalent to an inflection in the way of tense, *I am moving* = *move-o*.
7. *Was, were*; ditto, *I was beaten* = *tr-uf-feri*; *I was moving* = *move-bam*.

According to their non-auxiliary significations. — The power of the word *have* in the combination *I have a horse*, is clear enough. It means possession. The power of the same words in the combination *I have been*, is not so clear; nevertheless it is a power which has grown out of the idea of possession. This shows that the power of a verb as an auxiliary may be a modification of its original power; i. e. of the power it has in non-auxiliary constructions. Sometimes the difference is very little; the word *let*, in *let us go*, has its natural sense of permission unimpaird. Sometimes it is all but lost. *Can* and *may* exist chiefly as auxiliaries.

1. Auxiliary derived from the idea of possession — *have*.
2. Auxiliary derived from the idea of existence — *be, is, was*.
3. Auxiliary derived from the idea of future destination, dependent upon circumstances external to the agent — *shall*.
4. Auxiliary derived from the idea of future destination, dependent upon the volition of the agent — *will*. *Shall* is simply predictive, *will* is predictive and promissive as well.
5. Auxiliary derived from the idea of power, dependent upon circumstances external to the agent — *may*.
6. Auxiliary derived from the idea of power, dependent upon circumstances internal to the agent — *can*. *May* is simply permissive; *can* is potential. In respect to the idea of power residing in the agent being the cause which determines a contingent, *can* is in the same relation to *may* as *will* is to *shall*.
7. Auxiliary derived from the idea of sufferance — *let*.
8. Auxiliary derived from the idea of necessity — *must*.
9. Auxiliary derived from the idea of action — *do*.

In respect to their mode of construction, auxiliary verbs combine with others in three ways.

1. With participles. (a) With the present or active participle, *I am speaking*. (b) With the past, or passive, participle, *I am beaten, I have beaten*.
2. With infinitives. (a.) With the objective infinitive, *I can speak*. (b.) With the gerundial infinitive, *I have to speak*.
3. With both infinitives and participles, *I shall have done, I mean to have done*. — *Dr. R. G. Latham, English Language*.

Auxiliary. adj. Assisting; helping

Auxiliary. s. Help; aid.

Avail. s. Profit; account; mean towards an end; advantage; benefit.

Milman, History of Latin Christianity, b. xiv. ch. x.

AVER

Avér. v. a. [Lat. *ad verum* = to the truth.

— Though this word is marked, in respect
to its part of speech, as a verb active or
transitive, the construction is not always
evident. This is because it governs a pro-
position, or collection of words, rather than
any single word. To utter a truth is one
thing; to state that such or such a pro-
position constitutes a truth (i. e. that it is
true) is another. In the former case the
single word *truth* is the name of the object;
in the latter the object is expressed by the
whole proposition. This is the case with
the first and second of the following ex-
tracts, wherein the whole sentences, *though*
the power of God, &c., and *I had killed*
the bird, &c., are the many-worded names
of the object; the object itself being ex-
pressed by a proposition. In the third
the construction is different; inasmuch,
as between the verb and the proposi-
tion the word *that* is inserted. Orig-
inally this was, purely and simply, the
demonstrative pronoun in the objective
case, in the singular number, and in the
neuter gender.

It told us that there was something
averred. What this was, was explained
by the sentence which followed. This pro-
nominal character of the word *that* is
made clearer by the following example in
dialogue:

A. What did he aver?

B. That he was there.

A. Did he aver that?

B. Yes. He averred not only *that* he
was there, but, also, *that* he saw him there.

Pronoun, however, as the word *that* is, in
respect to its origin, it is often treated as a
conjunction. This is because its function
is to join propositions. In the following
pair, (1) *I aver* (2) *he was there*, there are
two statements, which, as they stand at
present, may or may not be connected.
Whether they be so or not is often inferred
from the context; in which case *that* is
said to be omitted. When *that*, however, is
inserted, the connection is beyond doubt.
I aver *that* he was there.

Such are the reasons for calling *aver* an
Active or Transitive verb, even when no
noun in the objective case follows it. For
a fuller notice see *That*.

Declare positively, peremptorily.

We may *aver*, though the power of God be in-
finite, the capacities of matter are within limits.—
Bentley.

Nor dim nor red, like God's own head,
The glorious sun uprist,
Then all *averred* I had killed the bird
Which brought the fog and mist.
'Twas right, said they, those birds to slay
That bring the fog and mist.

Coleridge, Ancient Mariner.

They afterwards *averred* that they had been
tempted to surrender with the understanding that
the Papal banners were to be displayed on the walls
of Palestrina; but that the Papal honour once satis-
fied, perhaps the fortifications dismantled, the city
was to be restored to its lords.—*Milman, History of*
Latin Christianity, b. xi. ch. vii.

Avérgé. s. and adj. [see extract.]

[*Avérgis*, or *Averia*, was applied to cattle in general,
as the principal possession in early times.

'Hoc placitum dilacionem non recipit propter
avéria, i. e. animalia muta, ac diu detineantur in-
clusa.'—*Regiam Majestatem*.

'Si come jeo bayle a un home mes berbits a cam-
pester, ou mes bouefs à arer la terre, et il occist mes
avérs.'—*Littleton*.

We then have *avéria carruce*, beasts of the plough;
and the word *avéria* finally came to be confined to
the signification of cart-horses.

Average was the duty work done for the lord with
the *avérs*, or draught cattle, of the tenant. 'Scien-
dum est quod unumquodque *avérageum* activale
fieri debet inter Hokday et gulam Augusti.' (Spel-
man in Duc.) *Average*, from the G. *haferei*, is a
totally different word from the foregoing. The pri-

AVÉR

mitive meaning of *haferei* seems to be sea-damage,
damage suffered on the conveyance of goods by sea,
from the Scandinavian *haf, hær*, the open sea, point-
ing to the shores of the Baltic, where so many of our
nautical terms took their rise, for the origin of the
word. This in Fr. became *avaris*, decay of wares or
merchandise, leakage of wines, also the charges of
the carriage or measuring thereof.—*Cotgr.*; *avarie*,
damage suffered by a vessel or goods from the de-
parture to the return into port. (Dict. Etym.)
Marchandise avariées, damaged goods. But when
goods were thrown overboard for the safety of the
vessel, it was an obvious equity to divide the loss
amongst those who profited by the sacrifice. Hence
haferei was applied to the money paid by those who
receive their goods safe, to indemnify those whose
goods have been thrown overboard in a storm.—
(Küttner.) It *avarie*, calculation and distribu-
tion of the loss arising from goods thrown over-
board.—*Altieri*; an equal distribution of the loss
among the shippers. Hence, finally, in the modern
sense of the term, an *average* is an equal distribution
of whatever inequalities there may be among all the
individuals of a series, and then the value of the indi-
vidual so compensated. The origin of *average* in the
latter sense became much obscured when by the prac-
tice of assurance the nautical *average* came to signify a
contribution made by independent insurers to com-
pensate for losses at sea, instead of a contribution by
those who received their goods safe, to make good
the loss of those whose wares were thrown overboard
for the general safety.—*Wedgwood, Dictionary of*
English Etymology.]

1. In Navigation. See extract.

A certain contribution that merchants propor-
tionably make towards the losses of such as have their
goods cast overboard for the safety of the ship in a
tempest; and this contribution seems so called, be-
cause it is so proportioned, after the rate of every
man's *average* of goods carried.—*Cowell*.

2. Used metaphorically. Mean proportion.

In order to do this, we make as many trials as
possible, preserving A invariable. The results of
these different trials will naturally be different, since
the indeterminate modifying causes are different in
each: if, then, we do not find these results to be
progressive, but on the contrary to oscillate about a
certain point, one experiment giving a result a little
greater, another a little less, one result tending a
little more in one direction, another a little more in
the contrary direction; while the *average*, or middle
point, does not vary, but different sets of experi-
ments (taken in as great a variety of circumstances
as possible) yield the same mean, provided only they
be sufficiently numerous; then that mean, or *average*
result, is the part, in each experiment, which is due
to the cause A, and is the effect which would have
been obtained if A could have acted alone: the
variable remainder is the effect of chance, that is, of
causes the coexistence of which with the cause A
was merely casual. The test of the sufficiency of the
induction in this case is, when any increase of the
number of trials from which the *average* is struck,
does not materially alter the *average*.—*Mill, System*
of Logic, b. iii. ch. xvii. § 4.

The case to which I refer, is that of the proportion
kept up in the births of the sexes: a proportion
which if it were to be greatly disturbed in any
country, even for a single generation, would throw
society into the most serious confusion, and would
infallibly cause a great increase in the vices of the
people. Now, it has always been suspected that, on
an *average*, the male and female births are tolerably
equal; but, until very recently, no one could tell
whether or not they are precisely equal, or if un-
equal, on which side there is an excess.—*Buckle*,
History of Civilization in England, vol. i. ch. iv.

It may be that, owing to some physical causes still
unknown, the *average* capacity of the brain is, if we
compare long periods of time, becoming gradually
greater; and that therefore the mind, which acts
through the brain, is even independently of educa-
tion, increasing in aptitude and in the general com-
petence of its views.—*Ibid*.

Avérment. s. Positive declaration.

In the preceding extract it is just possible that the *to* before *toil* may be the sign of the infinitive mood: in the following the construction is slightly ambiguous; since *to* may refer to *object* as well as *avérsion*.

His passion for ceremonies, his reverence for holidays, vigils, and sacred places, his ill concealed dislike of the marriage of ecclesiastics, the ardent and not altogether disinterested zeal with which he asserted the claims of the clergy to the reverence of the laity, would have made him an object of *avérsion* to the Puritans, even if he had used only legal and gentle means for the attainment of his ends.—*Macaulay, History of England*, ch. i.

This addition of the words 'you and the rest,' is a familiar figurative speech, called apostrophe, which is an *avérsion* of speech from one thing or person to another.—*Bishop Morton, Episcopacy asserted*, p. 101.

[The derivatives of *averto* are special instances of a principle which demands attention. The elements of *averto* are *verto* = turn, and *a* = from. Meanwhile, no two notions are more opposite than those suggested by the words *to* and *from*. Yet we have seen that *aversion* is followed not only by *from* and *for*, but by *to* and *towards*.

The rule that prepositions in composition, when followed by a noun, require

M

AVIA

AVERSATE

that noun to be in the case which those prepositions would govern, if they stood separate from the verb and as independent parts of speech (whether good or bad for languages like the Latin and Greek), has no place in English; since in English there is but one case for a preposition to govern.

Again, in an English sentence, the preposition which enters into composition, and which (so doing) forms a compound, may belong to a language different from that which contains the independent preposition. In the words before us, *a*, though the equivalent to *from*, is by no means the same word. Hence, even if the rule just given held good, it would be no rule at all to a person who knew nothing of Latin. *Avérto*, though made up of elements equivalent to those which give *turn-from*, is by no means made up of the same. If it were, such an expression as *aversion* to would be a contradiction in terms, and a *turning-from to toil* (the actual translation of *aversion to*) would be an impossible expression. Yet it exists.

The solution of this apparent paradox lies in the fact of *aversion* being a *relation*; and, in the expression of relations, we use the word *to*. An *aversion to toil* is a feeling hostile *to*, or *towards*, *toil*; an indisposition *for* *toil*.

When we see *aversion* followed by *to*, *towards*, or *for*, we must remember that it means not only *turning-from*, but *repugnance*, *dislike*, *hostility*, &c. The same applies to other words.

Further notices of this tendency for the general import of a term to overrule its etymological element will appear in the sequel. See *Unconnected* as followed by *with*.]

Avocet. *s.* Name of a Grallatorial bird: (Recurvirostra Avocetta).

The *avocet* is certainly a singular looking bird, both in reference to its beak as well as its feet; but it is also as handsome as it is singular. The beak is curved upwards, is slender, pointed and flexible, having very much the appearance of a piece of elastic whalebone, and is to the bird, I have no doubt, a delicate organ of touch; while the semi-palmated feet seem only intended to support the bird on soft muds, as it never attempts to paddle or swim when out of its depth, but allows itself to float along motionless. This bird is, apparently, more rare now than formerly.—*Arrell, British Birds.*

Avow. *v. a.* [from Lat. *advoco* = call to.] Declare openly and without disguise; proclaim. [To *avow*—*avouch*. Under the feudal system, when the right of a tenant was impugned he had to call upon his lord to come forwards and defend his right. This in the Latin of the time was called *advocare*, Fr. *voucher à garantie*, to *vouch* or call to warrant. Then as the calling on an individual as lord of the fee to defend the right of the tenant involved the admission of all the duties implied in feudal tenancy it was an act jealously looked after by the lords, and *advocare*, or the equivalent Fr. *voucher*, to *avow*, came to signify the admission by a tenant of a certain person as feudal superior. . . . Finally, with some grammatical confusion, Lat. *advocare*, and E. *avow* or *avouch*, came to be used in the sense of performing the part of the *vouchee* or person called on to defend the right impugned. —Wedgwood, *Dictionary of English Etymology*.

Fr. *eswarder* (answering in form to E. *award*), to inspect goods, and, incidentally, to pronounce them good and marketable; *eswardeur*, an inspector. (Hecart.) An *award* is accordingly in the first place the taking a matter into consideration and pronouncing judgment upon it, but in later times the designation has been transferred exclusively to the consequent judgment. Compare Dan. *æne*, *æw*, and with respect to the loss of the initial *h*, which is very unusual in a Teutonic derivation, E. *average*, Dan. *haveri*.—Wedgwood, *Dictionary of English Etymology*.]

There stood a forest on the mountain's brow,
Which overlook'd the shaded plains below:

the next morning, when the courage which he had drawn
from wine and company had evaporated, when he

when the thought of the block, the ax, and the
sawdust rose in his mind.—*Macaulay, History of England*, ch. xvii.

Axioms, or principles more general, are such as this, that the greater good is to be chosen before the lesser.—*Hooker*.

The axioms of that law, whereby natural agents are guided, have their use in the moral.—*Id.*
Their affirmations are no axioms; we esteem thereof as things unsaid, and account them but in list of nothing.—*Sir T. Browne*.

When monks or friars were the only men of letters, and monastic schools the only field on which intellect encountered intellect, the huge tomes of Aquinas, and the more summary axioms of Peter Lombard, might absorb almost the whole active mind of Christendom.—*Milman, History of Latin Christianity*, b. xiv. ch. x.

The idea of space is exhibited for scientific purposes, by the definitions and axioms of geometry; such, for instance, as these:—the definition of a right angle, and of a circle;—the definition of parallel lines, and the axiom concerning them:—the axiom that two straight lines cannot inclose a space. These definitions are necessary, not arbitrary; and the axioms are needed as well as the definitions, in order to express the necessary conditions which the idea of space imposes. The definitions and axioms of elementary geometry do not completely exhibit the idea of space. In proceeding to the higher geometry, we may introduce other additional and independent axioms; such as that of Archimedes, that a curve line which joins two points is less than any broken line joining the same points and including the curve line.—*Whewell, Novum Organon renovatum*, 26, 27.

Axiomatic. *adj.* Relating to an axiom.

After the decline of the Aristotelean philosophy, many controversies arise touching the truth and, still more, touching the axiomatic character of the law.—*Sir W. Hamilton, Logic*, i. 88.

In order to acquire any exact and solid knowledge, the student must possess with perfect precision the ideas appropriate to that part of knowledge; and this precision is tested by the student's perceiving the axiomatic evidence of the axioms belonging to each fundamental idea.—*Whewell, Novum Organon renovatum*, 17.

Axiomatiçal. *adj.* Same as Axiomatic.

Hippocrates did well to front his *axiomatiçal* experiments (the book of Aphorisms) with the grand miscellanies in the practice of most able physicians.—*Whitlock, Manners of the English*, p. 169.

That a conjectural critic should often be mistaken, cannot be wonderful either to others or himself, if it be considered that in his heart there is no system, no principle and *axiomatiçal* truth that regulates subordinate position.—*Johnson, Preface to Shakespeare*. (Ord MS.)

Axii. *s.* Species of Indian deer (Cervus Axis).

In the glades and park-like openings, the spotted *axii* troops in herds as numerous as the fallow-deer in England. . . . And in journeys we found the flesh of the *axii* and the muntjac a sorry substitute for that of the pea-fowl, the jungle-cock, and flamingo.—*Sir J. E. Tennent, Ceylon*, pt. ii. ch. i.

Axis. *s.* [Lat. *axis* = axle.]

1. Line, real or imaginary, that passes through anything, on which it may revolve.

But since they say our earth, from morn to morn,
On its own *axis* is oblig'd to turn;
That swift rotation must disperse in air
All things which on the rapid orb appear.

On their own *axis* as the planets run,
And make at once their circle round the sun
So two consistent motions act the soul,
And one regards itself, and one the whole. *Pope*.

The moon resembles the earth in being a solid, opaque, nearly spherical substance, appearing to contain, or to have contained, active volcanoes; receiving heat and light from the sun, in about the same quantity as our earth; revolving on its *axis*; composed of materials which gravitate, and obeying all the various laws resulting from that property.—*Mill, System of Logic, On Analogy*.

2. In Optics. Ray passing through the centre of the eye.

But, by that ingenious instrument of Professor Wheatstone's invention—the pseudoscope—the last two are made to contradict each other. The muscular actions, by which the usual *axes* are adjusted,

being the more marked and accompanied by the stronger sensations, give the preponderating evidence, and the result is, that, when looked at through the pseudoscope, convex objects seem concave, and concave ones convex.—*Herbert Spencer, Elements of Psychology*, pt. iii. ch. xiv.

Axle. *s.* Cylinder which passes through the middle of the wheel, and on which it rotates.

And the gilded car of day
His glowing axle doth alay
In the steep Atlantick stream. *Milton, Comus*, 96.

The fly sat upon the *axletree* of the chariot-wheel,
and said, What a dust do I raise!—*Bacon*.

He saw a greater sun appear
Than his bright throne, or burning *axletree*, could
bear. *Milton, Ode on the Morning of Christ's Nativity*, 84.

Ay. [A.S. *gea* = yea. — As a part of speech this word belongs to the same group as *yes* and *no*; these being words of a class by themselves, and, according to the principles of the present writer, by no means adverbs, though often called so. It is submitted to the reader that the best test for ascertaining what part of speech a given word is to be considered, is to ask what place it takes in the construction of a proposition. Now the adverbs only enter into propositions in conjunction with some other term; being for this reason called by the logicians *syntagmatic*, i. e. words which can only form a term in which anything is predicated by being joined with something else. We can say the *fire burns brightly*, but not the *fire brightly*, &c.

Now *yes* and *no* constitute not only terms but something more, i. e. whole propositions; being equivalent to *it is so*, and *it is not so*. Yet they are not independent propositions. They never stand alone. They are answers to either questions or commands. As such they *imply* a proposition to which they correspond. This is their characteristic. They can form propositions, but only when there is another to match them. For the difference between them and the conjunctions see *Conjunction*.]

1. Yes.

Return you thither?—
Ay, madam, with the swiftest wing of speed.

Remember it, and let it make thee crest fall'n;
Ay, and allay this thy abortive pride.

Shakespeare, Henry VI. Part II. iv. 1.

Ay. *s.* Word itself, by which, in Parliament, consent, when given by acclamation, is expressed.

Another was the late Speaker Trevor, who had, from the chair, put the question whether he was, or was not, a rogue, and had been forced to pronounce that the *Ayes* had it.—*Macaulay, History of England*, v. 15.

In the Commons members must be present and signify their wishes by saying 'aye' or 'no.' If the 'noes' are in the majority, the bill or amendment is lost; if the 'ayes' prevail, the bill proceeds, or the amendment stands part of it.—*A. Fonblanque, jun., How we are governed*, let. 7.

The Noes were a hundred and seventy, and the Ayes only a hundred and sixty one. Another attack was made a few days later with no better success. The Noes were a hundred and eighty five, the Ayes only a hundred and seventy five.—*Macaulay, History of England*, ch. xx.

No stay, nor rest, till the wide breach is clos'd.

This brute is much like a dog, greedy aye for
stolen flesh.—*The Book of the Dean of Lismore*, p. 108.

Aye-aye. s. [see extract.] Cheiromys
madagascariensis.

Sonnerat had both a male and female, which, on
board ship, were fed on cooked rice, and lived only two
months. He obtained them from the West Coast of
Madagascar, which he affirmed to be the part of the
island they inhabit. The natives of the East Coast
declared that his specimens were the first they had
seen: and their cry of astonishment, *aye-aye*, on be-
holding the odd-looking quadruped, suggested the
name which Sonnerat gave to it. . . Buffon, after his
close examination of the skin of the *aye-aye* pre-
sented to the Royal Museum by Sonnerat, concludes
that it is more closely allied to the genus of squirrels
than to any other, &c.—*Owen, Monograph on the*

ject from the north or south point of the horizon

by a vertical circle; or it is the angle comprised be-
tween two vertical planes, one passing through the
elevated pole, the other through the object.—*Sir J.*
Herschel, Outlines of Astronomy, art. 103.
The pilots now their *ázimuth* attend,
On which all courses, duly form'd, depend:

The quadrant's shadows studious they survey;

W. Falconer, *The Shipwreck*, i.
We have borrowed from the Arabians various as-
tronomical terms, as Zenith, Nadir, *Ázimuth*, *Alma-*
canter. And these words, which among the Arabians
probably belonged to the first class of appropriated
scientific terms, are for us examples of the second
class, invented scientific terms; although they differ
from most that we have mentioned, in not containing
an etymology corresponding to their meaning in any
language with which European cultivators of science
are generally familiar. Indeed, the distinction of
our two classes, though convenient, is in a great
measure, casual. Thus most of the words we for-
merly mentioned, as parallax, horizon, eclipse,
though appropriated technical terms among the
Greeks, are to us invented technical terms.—*Whe-*
well, Novum Organon renovatum.

Azóte. s. [Gr. *á* = not, *ζω* = live; that which
will not sustain life.] Nitrogen.

The Crucifere and Fungi contain an unusual pro-
portion of *azote*; the Labiatae are the chief sources
of essential oils, the Solanaceae are very commonly
narcotic, &c.—*Herbert Spencer, First Principles*.

Azotized. adj. Nitrogenized.

The temperature of our body is kept up by sub-
stances which contain no nitrogen, and are called
non-*azotized*; the incessant decay in our organism
is repaired by what are known as *azotized* sub-
stances, in which nitrogen is always found. In the
former case, the carbon of non-*azotized* food com-
bines with the oxygen we take in, and gives rise to
that internal combustion by which our animal heat
is renewed. In the latter case, nitrogen having
little affinity for oxygen, the nitrogenous or *azotized*
food is, as it were, guarded against combustion; and
being thus preserved, is able to perform its duty of
repairing the tissues, and supplying those losses
which the human organism constantly suffers in the
wear and tear of daily life.—*Buckle, History of Civil-*
ization in England, ch. i.

The extreme rapidity of the putrefaction of *azo-*
tized substances, compared with the gradual decay
of non-*azotized* bodies (such as wood and the like)
by the action of oxygen alone, he explains from the
general law that substances are much more easily
decomposed by the action of two different affinities
upon two of their elements, than by the action of
only one.—*Herbert Spencer, First Principles*.

Ázure. adj. [Fr. *azur*; Ital. *azzurro*.] Blue;
faint blue.

Like pomels round of marble clear,
Where *azur'd* veins well mixt appear.
Sir P. Sidney.
The blue of the first order, though very faint and
little, may be the colour of some substance; and the
azure colour of the skies, seems to be this order.—
Sir I. Newton.

Thus replies
Minerva, graceful with her *azure* eyes. Pope.

His *azure* turbulent domain
Your empire owns.
Mortal! to thy bidding bowed,
From thy mansion in the cloud,
Which the breath of twilight builds,
And the summer's sunset gilds,
With the *azure* and vermilion,
Which is mixed for my pavilion. Byron, *Manfred*.

Ázured. part. adj. Azure.

I have bedimm'd
The noon-tide sun, called forth the mutinous winds,
And 'twixt the green sea and the *azur'd* vault
Set roaring war. Shakespeare, *Tempest*, v. 1.
The proceeding and power of God, covering, from
his heaven and *azured* throne, his poor children,
exposed otherwise unto all injuries of weather,
storms, and tempests.—*Harmer, Translation of*
Beza's Sermons, p. 371.
Come, serene looks,
Clear as the crystal brooks,
Or the pure *azur'd* heaven.

Sir H. Wotton, *Reliquie Wottoniana*.
No clear appeared upon the *azured* sky:
A veil of storms had shadowed Phoebus,
And in a sable mantle of disgrace,
Sate he that is y-cleped heaven's bright eye,
As though that he,
Perplexed for Clyta, meant to leave his place,
And wrapt in sorrows did resolve to die.
Greene, *Poems*.

Ázurine. adj. Sky-blue. *Rare*.

Among the stones of this myne, that is best which
is of a blew or *azurine* colour, lyke unto a saphire,
and is commonly called Lapis lazuli.—*Eden, Martyr*,

order of veynes between quarry and quarry jeyned
with the sayde *azurine* stone, and mixte therein.—

Of turkis blue, and emerald green. Milton, *Comus*, 893.

Ázygous. adj. [Gr. *á* = not, *ζυγόν* = yoke.]
In *Anatomy*. Unpaired.

The shape, size, and number of the median *azy-*
gous dorsal and anal fins, depend on the develop-
ment and grouping of the accessory and intercalary
spines: the true vertebral, neural, and hæmal spines
give scarcely more indication of the nature or exis-
tence of those fins, than the neural spines in the
porpoise or fin-whales do of their not less essentially
though more histologically dermal dorsal fin.—*Owen*,
Lectures on Comparative Anatomy, lect. iii.

Ázyme. s. [Gr. *á* = not, *ζυμος* = leaven.]

We have shunned the obscurity of the Papists in
their *azymes*, tunick, &c.—*The Translators of the*
Bible to the Reader.

Great babblers, or talkers, are not fit for trust.—
Sir R. L'Estrange.

In those despatches he sometimes alluded, not
angrily, but with calm disdain, to the censures
thrown upon his conduct by shallow babblers, who,
never having seen any military operation more im-
portant than the relieving of the guard at Whitehall,
imagined that the easiest thing in the world was to
gain great victories in any situation and against any
odds, and by sturdy patriots who were convinced
that one English carter or thresher, who had not
yet learned how to load a gun or port a pike, was a
match for any six musketeers of King Lewis's house-
hold.—*Macaulay, History of England*, ch. xiv.

None else could understand;
I found him garrulously given,
A babbler in the land.

For government is a thing that governs, that
guides, and, if need be, compels. Visible in France
there is not such a thing. Invisible, inorganic, on
the other hand, there is: in Philosophe saloons, in

in the pen of the pamphleteer.—*Carlyle, French Re-

[This word is used in two senses, apparently distinct, viz. in that of a corn-dealer, or carrier, one who bought up corn in the market for the purpose of selling it in other places; and secondly, as the name of the quadruped so called. Now we have in Fr. *bladier*, a corn-dealer . . . the diminutive of which . . . would be *blairas*, the actual designation of the quadruped badger in the same language, which would thus signify a little corn-dealer, in allusion doubtless to some of the habits of that animal, with which the spread of cultivation has made us little familiar. . . . But further, there can be little doubt that E. *badger*, whether in the sense of a corn-dealer or of the quadruped, is directly descended from the Fr. *bladier*, the corrupt pronunciation of which, in analogy with *soldier*, *solger*, *sodger*, would be *bladger*; and though the omission of the *l* in such a case is a somewhat unfamiliar change, yet many instances may be given of synonyms differing only in the preservation (or insertion as the case may be) or

omission of an *l* after an initial *b* or *p*.—*Wedgwood, Dictionary of English Etymology*.

Bail. s. See extract.

Bail is also used in the sense of post or bar. The *bails* were the advanced posts set up outside the solid defences of a town. Fr. *baille*, barrier, advanced gate of a city, palissade, barricade, (Roquefort.) It is probably the same word as *paling* or *pale*. Fr. *balises*, finger-posts, posts stuck up in a river to mark the passage. *Balle*, barrière (Hecart); *Bale*, poste, retranchement; *revenir à ses bales*, to return to one's post, at the game of pss in the corner, or cricket. rank, the tutor became a man of great consequence, and the *παις βασιλευς* was one of the chief officers of state at Constantinople. The name was also applied to the tutor of a woman or a minor. Thus the husband became the *Bajulus uxoris*, and the name was gradually extended to any one who took care of the rights or person of another. In this sense it is to be understood the ordinary *B.* expression of giving bail, the person who gives bail being supposed to have the custody of him whom he bails. From *bajulus* was formed *It. baillo, balivo (bajulivus)*; *Fr. bail, baillif, E. bail, bailiff*. The *Fr. bailleur*, to hand over, from *bajulare*, in the sense of making one a bail or keeper of the thing handed over, giving it into his bail or control. Finally, every one to whom power was intrusted to execute not on his own behalf was called a *bailiff, bajulus* or *ballivus*, from the regent of the empire (as we find in the case of Henry of Flanders: 'Principes, barones et milites exercitus me imperii Ballivum elegerunt') to the humble bailiff in husbandry who has the care of a farm, or the officer who executes the writs of a sheriff.—*Wedgwood, Dictionary of English Etymology.*

1. Pair of scales.

A balance of power, either without or within a state, is best conceived by considering what the nature of a balance is. It supposes three things: first, the part which is held, together with the hand that holds it; and then the two scales, with what ever is weighed therein.—*Swift.*

For when on ground the burdened balance lies,
The empty part is lifted up the higher.

2. Act of comparing, or weighing, either materially or mentally, two things.

The consequence was, that the order and balance of the country were destroyed; the minds of men became habituated to the most daring speculations, while their acts were controlled by the most oppressive despotism; and they felt themselves possessed of capacities which their rulers would not allow them to employ.—*Buckle, History of Civilization in England*, vol. i. ch. vii.

But in France the admiration for royalty had become so great, that this balance was disturbed; the inquiries of men not daring to settle on politics, were fixed on religion, and gave rise to the singular phenomenon of a rich and powerful literature, in which unanimous hostility to the church was unaccompanied by a single voice against the enormous abuses of the state.—*Ibid.*

So great, indeed, is the effect of a skilful interposition of short, pointed, forcible sentences, that even a considerable violation of some of the foregoing rules may be, by this means, in a great degree, concealed; and vigour may thus be communicated (if vigour of thought be not wanting) to a style chargeable even with tautology. This is the case with much of the language of Dr. Johnson, who is certainly on the whole an energetic writer; though he would have been much more so, had not an over-attention to the roundness and majestic sound of his sentences, and a delight in *balancing* one clause against another, led him so frequently into a faulty redundancy.—*E. Whately, Elements of Rhetoric*, ch. ii. § 8.

Balcony. s. [Fr. *balcon*; Ital. *balcone*.]

Frame before the window of a room.

[From the Persian *bāla khaneh*, upper chamber. An open chamber over the gate in the Persian caravanserais is still called by that name, according to Rich. The term was then applied to the projecting platform from which such a chamber looked down upon the outside. As this balcony over the gateway is precisely the position of the *barbican* in a castle wall, it is probable that the latter name, in Mid. Lat. *barbacana*, is only another corruption of the same word which gives us *balcony*. If we compare the various modes of writing the word from whence our belfry is derived, and especially the two, *belfredum*, *berlefredum*, we shall find nothing startling in the conversion of *bala khaneh* into *barba-cana* by persons by whom the elements of the word were not understood. A barbican was a defence before a gate, originally, doubtless, a mere projecting window from whence the entrance could be defended, or the persons approaching submitted to inspection, the word being probably brought from the East by the Crusaders. *Balcony* is a much later introduction, and has accordingly better preserved the true form of the original.—*Wedgwood, Dictionary of English Etymology*.]

Houses of two stories have, many of them, very large upper rooms, which have many double doors in the sides of them, like those in our balconies, to open and let in fresh air.—*Terry, Voyage to East India*, p. 190: 1655.

- Balk.** *s.* [*A.S. balc.*]

[To *balk* is to pass over in plowing, to leave a thing
unaccomplished, to disappoint, skip over. . . A
balk, then, is the separation between one division of
a thing and another, the partition over which you
must skip in passing from one division to the other,
and specially a ridge of green sward left by design
between different occupancies in a common field.
(Halliwell.) Icel. *balkr*, the division between the
stalls in a cow-house. Sw. *balka*, to partition off. . .
Then, as it appears, from the resemblance in shape
to a balk in a ploughed field, the term is applied to
a hearn beam. Sw. *balk*, Dan. *bialke*, Picard. *baucue*;
and in French for the like reason, to a course of
bricks, *baucue*; *baucuer*, to rough-hew, to hew into
the form of a beam. The *balks* are the beams of
which the roof is composed. . . A hay-loft is
provincially termed the *balks* (Halliwell), because
situated among the rafters. Hence also probably
the Ital. *balko*, or *palco*, a scaffold; a loft-like erection
supported upon beams.—*Wedgwood, Dictionary of*
English Etymology.]

Ban. *s.* [see extract.]

[The primitive meaning of the word seems to have been to summons to the army. In the commencement of the feudal times all male inhabitants were in general required to give personal attendance when the king planted his banner in the field, and sent round a notice that his subjects were summoned to join him against the enemy. . . . Now this calling out of the public force was called *bannire in hostem, bannire in exercitum, populum in hostem convocare, bannire exercitum*; in Fr. *banir l'oust*. A.S. *theodisce ut abannan*. In Layamon we constantly find the expression, *he bannede his ferde*, he assembled his host. The expression seems to arise from *bann* in the sense of standard, flag, ensign. The raising of the king's banner marked the place of assembly, and the primitive meaning of *bannire* was to call the people to the *bann* or standard. The term was then applied to summoning on any other public occasion, and thence to any proclamation, whether by way of injunction or forbidding. . . . In like manner we find *bannire ad placita, ad molendinum, &c.*, summoning to serve at the Lord's courts, to bring corn to be ground at his mill, &c. Thus the word acquired the sense of proclamation, extant in Sp. and It. *bando*, and in E. *banns* of marriage. In a special sense the term was applied to the public denunciation by ecclesiastical authority; Sw. *bann*, excommunication; *bann-lysa*, to excommunicate (*lysa*, to publish); *banna*, to reprove, to take one to task, to chide, to curse; E. to *ban*. In Fr. *bandon* the signification was somewhat further developed, passing on from proclamation to command, permission, power, authority. A *son bandon*, at his own discretion. O.E. *bandon* was used in the same sense.—*Wedgwood, Dictionary of English Etymology.*]

As the column of mercury in the *barometer* is counterpoised by a column of air of equal weight, so whatever causes make the air heavier or lighter, the pressure of it will be thereby increased or lessened, and of consequence the mercury will rise or fall.—*Harris*.

Gravity is another property of air, whereby it counterpoises a column of mercury from twenty-seven inches and one half to thirty and one half, the gravity of the atmosphere varying one tenth, which are its utmost limits; so that the exact specific gravity of the air can be determined when the *barometer* stands at thirty inches, with a moderate heat of the weather.—*Arbuthnot, On the Effects of Air on human Bodies*.

We feel assured that the rock of Staffa, and that of the Giant's Causeway, called *basalt*, is volcanic, because it agrees in its columnar structure and mineral composition with streams of lava which we know to have flowed from the craters of volcanos.—*Sir C. Lyell, Manual of Elementary Geology, p. 6*.

The opinion once entertained that augite was the prevailing mineral in *basalt*, or even in the most augitic trap-rocks, must be abandoned. Although its presence gives to these rocks their distinctive character as contrasted with trachytes, still the principal element in their composition is felspar.—*Id., p. 470*.

In the better sort of work the plinth is tongued into a groove in the floor, by which means the diminution of breadth created by the shrinking never causes any aperture or chasm between its under edge and the floor, and the upper edge of the plinth is rebated upon the base.—*Gwilt, Cyclopædia of Architecture, p. 930*.

In a right-angled triangle the *base* is properly that side which is opposite to the right angle, i.e. the hypotenuse. *Base* of a solid figure is its lowest side, or that whereon it stands. *Base* of a conic section is a right-line on the hyperbola and parabola, formed by the common intersection of the secant plane and the base of the cone.—*Rees, Cyclopædia, in voc.*

The Latins, as they came between the Greeks and us, make use of the word *altitude*, which implies equally height and depth. Wherefore, considering, with no small grief, how many promising geniuses of this age are wandering (as I may say) in the dark without a guide, I have undertaken this arduous but necessary task, to lead them as it were by the hand, and step by step the gentle down-hill way to the *báthos*; the bottom, the end, the central-point, the non plus ultra of true modern poetry.—*Ibid. It is affirmed by Quintilian, that the same genius which made Germanicus so great a general would, with equal application, have made him an excellent heroic poet. In like manner, reasoning from the affinity there appears between arts and sciences, I doubt not but an active catcher of butterflies, a careful and fanciful pattern-drawer, an industrious collector of shells, a laborious and tuneful bag-piper; or a diligent breeder of tame rabbits, might severally excel in their respective parts of the *báthos*.—*Ibid.*

The transition, indeed, from fishes to these lowest amphibian or *batrachian* forms is so close and gradual, that whilst some true reptiles have passed for fishes, the higher fishes have been classed with amphibians, and even at the present day, a true fish—the protopetor or lepidostrean—has been described, and by some naturalists is still regarded, as a reptile.—*Ibid., introd. lect.*

The musketear was generally provided with a weapon which had, during many years, been gradually coming into use, and which the English then called a dagger, but which, from the time of William the Third, has been known among us by the French name of bayonet. The bayonet seems not to have been then so formidable an instrument of destruction as it has since become; for it was inserted in the muzzle of the gun; and in action much time was lost while the soldier unfixed his bayonet in order to

Be. Copula. See Am.

[As a copula this word, in the present literary language, is only used in hypothetical and secondary propositions; inasmuch as it is only used in the conjunctive mood. We say, *if I be, if thou be* (or *beest*), *if he be*, &c., but not *I be, thou beest, he be*; though all these expressions are to be found both in the older stages of the language, and in the provincial dialects. In German also, and in other allied dialects, it is indicative, *ich bin* = I am, *du bist* = thou art.

The A.S. form was *beon*. In respect to its derivation and original meaning, it may be said that the root *b* is the *f* in the Latin *fui*, the *φ* in the Greek *φωω*, and the *bh* in the Sanskrit *bhavadati*; its meaning being, not so much simply *be*, as *become*. In this lies the element of that conditional power which makes it conjunctive or subjunctive, rather than indicative. Things which are *becoming* or *growing into* anything have not completed the action which they suggest, but have something else to do. In this there is an element of uncertainty or contingency.

More than this, there is an element of futurity; a fact which is illustrated by more languages than one. In A.S. *beon* = *will be*; as, *Hi ne beoð na cilde, soðlice, on domesdage ac beoð swa miccle menn swa hi migton beon gif hi full, weoxon on gewunlicre ylde.* = *They will not be children, forsooth, on Domesday, but will be as much (so muckle) men as they might be if they were all grown (waxen) in customary age.* — *Ælfric's Homilies.*

The same root occurs in the Sarmatian tongues with the same power: as, *esmi* = I am; *būsu* = I shall be, Lithuanic. *Esmu* = I am; *bushu* = I shall be, Livonian. *Jesm* = I am; *budu* = I shall be, Slavonic. *Gsem* = I am; *budu* = I shall be, Bohemian: this proving, not that there is in Anglo-Saxon a future tense (or form), but that the word *beo* has a future sense.

Be, in the present English, is conjugated thus:—

CONJUNCTIVE	Present.		IMPERATIVE.	
	Sing.	Plur.	Sing.	Plur.
Be	Be	Be	Be	Be
Be	Be	Be	Be	Be

The remaining kind, 'petitio principii,' ['begging
the question,'] takes place when one of the Premises
(whether true or false) is either plainly equivalent to
the conclusion, or depends on that for its own recep-
tion. I have said, 'one of the Premises,' because in all
correct reasoning the two Premises taken together
must imply and virtually assert the conclusion. It
is not possible, however, to draw a precise line, ge-
nerally, between this fallacy and fair argument;
since, to one person, that might be fair reasoning,
which would be, to another, 'begging the question';
inasmuch as, to the one, the Premis might be more
evident than the Conclusion; while, by the other, it
would not be admitted, except as a consequence of
the admission of the conclusion. The most plausible
form of this fallacy is arguing in circle; and the
greater the circle the harder to detect.—*R. Whately, Elements of Logic, b. iii. § 4.*

never mention aversion,' answered the Beau, 'with

Thus *servus servet Veneri ne faciat an Cupidini*. Let your slave look whether she sacrifices to Venus or to Cupid.—*Plautus*. The verb to look itself is frequently found in the sense of looking after, seeing to, taking notice or care of. The It. *guardare*, to look, exhibits the original meaning of the Fr. *garder*, to keep or hold, and the *E. ward*, keeping. The supposition then that the notion of preserving, keeping, holding is originally derived from that of looking, is supported by many analogies.—*Wedgwood, Dictionary of English Etymology*.]

[It is not obvious how to harmonise the senses of believing, praising, permitting or giving leave, promising, which are expressed in the different Teutonic dialects by essentially the same word or slight modifications of it; Pl. D. *loven* *loven*, to believe; Du. *loven*, to praise, to promise, *erloven*, to give leave; Dan. *lov*, praise, reputation, leave; Icel. *lofa*, *lofsa*, to praise, to give leave; A.S. *leafa*, *gelaefa*, *belief*; *gelyfan*, to believe, *lyfan*, *ahlyfan*, to give leave; G. *glauben*, to believe, *loben* to praise, *erlauben* to permit, *verloven*, to promise or engage. The fundamental notion seems to be to approve, to sanction an arrangement, to deem an object in accordance with a certain standard of fitness. . . . The sense of praising may be easily deduced from the same radical notion. To *praise* is essentially to *prize*, to put a high price or value on, to extol the worth of anything, to express approval, or high estimation. Hence to simple approbation, satisfaction, consent, permission is an easy progress. Pl. D. to *der suaren lave*, to the approbation or satisfaction of the sworn inspectors; *mit eren lave*, with the consent of the heirs. In middle Latin the consent given by a lord to the alienation of a tenant's fief was expressed by the term *laus*, and E. *allow*, which has been shown to be derived from *laudare*, is used in the sense of approving, esteeming good and valid, giving leave or permission, and sometimes in a sense closely analogous to that of *believe*.—*Wedgwood, Dictionary of English Etymology.*]

Belladonna, n. [Ital. *bella* = beautiful, *donna* = woman, lady.] Atropa Belladonna (called also *deadly nightshade*); extract of the same used in medicine.

Its specific name [*Belladonna*] is derived, according to some, from its being used as a wash among the ladies to take off pimples or other excrescences from the skin; or, according to others, from its quality of representing phantasms of beautiful women to the disturbed imagination.—*Loudon, Encyclopædia of Plants, p. 155.*

The most familiar use of *belladonna* is that derived from its valuable property of dilating the pupil of the eye, so as to facilitate the examination of the deep-seated parts of this organ, and render the operation for cataract easier to the surgeon.—*Hooper, Medical Dictionary.*

Much of what we now call literature or *belles lettres* was formerly included in what the ancients called rhetorical studies.—*W. Whateley, Elements of Rhetoric.*

I looked at the latter every morning, and daily found some of the pollinia removed, till all were removed with the exception of the pollinia in one flower low down on one spike, and with the exception of those in one or two flowers at the apex of each spike, which were never removed. I then looked at the perfectly healthy plant under the *bell-glass*, and it had, of course, all its pollinia in their cells.—*C. Darwin, Fertilisation of Orchids*, ch. i.

Belligerent. *s.* One who carries on war. (Both this and the adjective are used to express a power, or nation, which is engaged not only in a regular war, but in one recognized as such, in opposition to mere *rebels* or *mutineers*.)
It would be intolerable if the law allowed private speculators, for their own exclusive profit, to endanger the neutrality of their country, or to furnish foreign *belligerents* with an excuse for watching and practically blockading English ports.—*Saturday Review*, July 4, 1863.

A *belligerent* is not entitled to prevent smuggling by any means in his power, but only by means regularly prescribed. Articles of commerce are carefully classified as of contraband, doubtful, or innocent use, destinations of vessels are defined and characterized, and the position of neutrals in relation to *belligerents* is exactly ascertained. But the end of all this, though the code was constructed in the interests rather of *belligerents* than neutrals, was to leave neutrals with a considerable margin for contraband trade. So many privileges might be pleaded, so many pretexts put forth, and so many forms of protection acquired, that the *belligerent* was constantly baffled in his endeavours to intercept a cargo of the destination of which neither he nor others could have the slightest doubt.—*Times Newspaper*, August 24, 1863.

Metaphors may be employed, as Aristotle observes, either to elevate or degrade the subject, according to the design of the author; being drawn from similar or corresponding objects of a higher or lower character. Thus a loud and vehement speaker may be described either as *bellowing* or as thundering. And in both cases, if the metaphor is apt and suitable to the purpose designed, it is alike conducive to energy.—*E. Whately, Elements of Rhetoric*, ch. ii. § 3.

In the following passage it is *singular*: at any rate its construction with the indefinite article is that of a *pair of bellows*.
Thou neither, like a *bellows*, swell'st thy face,
As if thou wert to blow the burning mass
Of melting ore. *Dryden*.

By tinkling sounds, when they go forth to victual;
Such is the sway of your great men o'er little.
Byron, Don Juan, vii. 48.

2. Leader.
To convince you that this design is not so foreign from some people's thoughts, I must let you know that an honest *bellwether* of our house had the impudence, some years ago, in Parliament time, to shake the lord bishop of Kilmore by his lawn sleeve, and tell him in a threatening manner, that he hoped to live to see the day, when there should not be one of his order in the kingdom.—*Swift, Letter on the Sacramental Test*. (Ord MS.)

Benefit of clergy is an ancient liberty of the church, when a priest, or one within orders, is arraigned of felony before a secular judge, he may pray his clergy; that is, pray to be delivered to his ordinary, to purge himself of the offence objected to him: and this might be done in case of murder. The ancient law, in this point of *clergy*, is much altered, for clerks are no more delivered to their ordinaries to be purged, but now every man, though not within orders, is put to read at the bar, being found guilty, and convicted of such felony as this *benefit* is granted for; and so burnt in the hand, and set free for the first time, if the ordinary's commissioner, or deputy, standing by, do say, 'Legit ut clericus;' or otherwise suffereth death for his transgression.—Cowell.

They were proceeding thus with the poor girl, when somebody smoking the cassoock, peeping forth from under the great coat of Adams, cried out, 'What have we here, a parson?' To *teem* or *beteem* must be explained to make suitable, to deem suitable, to vouchsafe, to deign, to afford, as Lat. *dignari*, to deign or deem worthy, from *dignus*.

[As this is the last of a long list of compounds in which *Be-* is the first element, a few remarks may be made on its import. It may be prefixed at will to any verb, participle, or participial adjective. With the exception of a few words, such as *Become*, *Behave*, *Behold*, &c., all belong to the English rather than the Anglo-Saxon stage of our language; and all are active or transitive. Some of even the old words had in the Anglo-Saxon a different prefix; e.g. *Believe* was *gelyfan*, and *Begin* (generally) *onginnan*. In *Belong*, the connection between length and relation is explained by the Latin *pertinere*, whence *appertain* or *reach* to anything.

The prefix, indeed, seems to have had the power of attaching the theme to which it appertains to some object; whence its active power. The sense, too, is often bad; or, at any rate, conveys a slight notion of disparagement. To *Berhyme* is to *overdo*, or *beset*, with *rhymes*. In some words, however, like *Belove*, *Bewail*, &c., it adds little to the original meaning.

In *Betray*, the prefix was, apparently, suggested by some word allied to the German *betriegen* = deceive. That the *-tray* is from the Latin *trado* is shown by the old form *betrash*, where the *sh* represents the *ss* of the participle of the French verbs in *ir*; itself the representative of the Latin *sc* in words like *abolesco*—whence the French *abolir*, *abolissant*, and the English *abolish*. *Trahir* stands to *tradere*, as *en-vahir* to *invadere*.

In *Richardson*, where the list is a long one (it might really be indefinitely lengthened), we find that certain authors (e.g. *Gascoigne*) seem to have affected it. Many of the words, indeed, are rhetorical rather than ordinary English.]

The It. *biesco*, *biesco*, from oblique, has a singular resemblance to *biescio*, used in precisely the same sense, though such a change of form would be very unusual. It was on account of this exclusive reference to Scripture, that the Protestant divines laid more stress on the inspiration of the holy writings than the theologians of the church of Rome; and that the Protestants were accused of *bibliolatriy*.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.

- [To **Bicker**. **Bickering**.—To skirmish, dispute, wrangle.

It is especially applied to Scotch to a fight with stones, and also signifies the constant motion of weapons and the rapid succession of strokes in a battle or broil, or the noise occasioned by successive strokes, by throwing of stones, or by any rapid motion. (Jamieson.) The origin is probably the representation of the sound of a blow with a pointed instrument by the syllable *pick*, whence the frequentative *picker* or *bicker* would represent a succession of such blows. To *bicker* in NE. is explained

to *platter*, Halliwell. Du. *bickeler*, a stone-hewer or stone-picker; *bickelen*, *bicken*, to hew stone; *bickel*, *bickel-steenken*, a fragment of stone, a chip, explaining the Sc. *bicker* in the sense of throwing stones. *Bickelen*, to start out, as tears from the eyes, from the way in which a chip flies from the pick. Hence Sc. to *bicker*, to move quickly. (Jam.) 'Ynglis archaris that hardy war and wycht
'Among the Scottis bykarit with all their mycht.' (Wallace in Jam.)

The arrows struck upon them like blows from a stone-cutter's pick.

It must be observed that the word *pick* (equivalent to the modern pitch) was used for the cast of an arrow.

'I hold you a grote I myke as furre with an arrowe as you.' (Palsgrave in Halliwell.) — Wedgwood, *Dictionary of English Etymology*.

Of course, however, our glossarial interpretations can convey but a very insufficient notion of the aptness of the poet's language to those to whom the Scottish dialect is not familiar. Such a phrase as *bickering brattle*, for instance, is not to be translated. The epithet *bickering* implies that sharp, explosive, fluttering violence, or impetuosity, which belongs to any sudden and rapid progressive movement of short continuance, and it expresses the noise as well as the speed. It is no doubt the same word with the old English *bickering*, but used in a more extensive sense; a *bicker* means commonly a short irregular fight, or skirmish; but Milton has 'bickering flame,' where, although the commentators interpret the epithet as equivalent to quivering, we apprehend it includes the idea of crackling also. — Craik, *History of English Literature*, ii. 402.

Bickering, part. adj. Quivering; playing backward and forward.

And from about him fierce effusion rowl'd

[To *bid*. Two verbs are here confounded, of distinct form in the other Teutonic languages. 1. To *bid* in the obsolete sense of to pray.

'For far lever he hadde wende
And *biddes* ys mete of he shulde in a strange lond.' (R. G.)

Bidders and beggars are used as synonymous in P. P. 'For he that beggeth other biddeth but if he have need'

He is false and faitour and defraudeth the neede.' In this sense the word is the correlative of Goth. *biddan*, *bidan*, *bath* or *bad*, *bedun*; A. S. *biddan*, *bed*, *geboden*; G. *bitten*, *but*; Icel. *bíðja*, or, in a reflexive form, *beidast*.

2. To *bid* in the sense of offering, bringing forwards, pressing on one's notice, and consequently ordering or requiring something to be done. Goth. *bjudan* in *anabjudan*, *faurbjudan*, to command, forbid; A. S. *beodan*, *bead*, *geboden*; G. *bielen*, to offer, *verbielen*, to forbid; Du. *bieden*, porrigere, offerre, *præbære*, *præstare*. (Kil.) . . . With respect to logical pedigree, the meaning of *bid*, in the sense of ask for, pray, may plausibly be derived from Goth. *beidan*, A. S. *bidan*, *abidan*, to look for. To pray is merely to make known the fact that we look for or desire the object of our prayers. The Lat. *peto*, *quero*, signifying in the first instance to seek or look for, are also used in the sense of asking for. The Icel. *leita* is used in each sense (Ihre v. *leita*), and the Sw. has *leita*, to look for, *anleita*, to solicit, just as the two ideas are expressed in E. by *seek* and *beseech*, for *besek*. — *Wedgwood, Dictionary of English Etymology*.]

Byron, Occasional Pieces.

With whatever plausibility it might be maintained that a connexion with temporal magistrates could only corrupt the purity and shackle the liberties of a Christian church, this argument was not for them

to urge who called on those magistrates to do the church's *bidding*, to enforce its decrees, to punish its refractory members; and while they disdained to accept the prince's cooperation as their ally, claimed his service as their minister. — *Hallam, Constitutional History of England*, ch. iv.

Bigot. s. [see extract.] One unreasonably devoted to a certain party; one prejudiced in favour of certain opinions; blind zealot.

[*Bigot*. The beginning of the 13th century saw the sudden rise and maturity of the mendicant orders of St. Francis and St. Dominic. These admitted into the ranks of their followers, besides the professed monks and nuns, a third class, called the tertiary order, or third order of penitence, consisting both of men and women, who, without necessarily quitting their secular avocations, bound themselves to a strict life and works of charity. The same outburst of religious feeling seems to have led other persons, both men and women, to adopt a similar course of life. They wore a similar dress, and went about reading the Scriptures and practising Christian life, but as they subjected themselves to no regular orders or vows of obedience, they became highly obnoxious to the hierarchy, and underwent much obloquy and persecution. They adopted the grey habit of the Franciscans, and were popularly confounded with the third order of those friars under the names of *Beguni*, *leghardi*, *Begutta*, *Bizocchi*, *Bizocari* (in Italian *Beghini*, *Bighini*, *Bighiotti*), all of which are apparently derived from Ital. *bigio*, Venet. *biso*, grey. . . . It will readily be understood how easily the name, by which these secular aspirants to superior holiness of life were designated, might be taken to express a hypocrite, false pretender to religious feeling—*Tartuffe*. Thus we find in It. *bigotto*, *bizocco*, a devotee, a hypocrite; Piedmontese *bigot*, *bisoch*; Fr. *bigot*, in the same sense. Sp. *bigardo*, a name given to a person of religion leading a loose life, *bigardia*, deceit, dissimulation; G. *beghart*, *gleichner* (Frisch), a bigot or hypocrite, a false pretender to honesty or holiness (Ludwig). In English the meaning has received a further development, and as persons professing extraordinary zeal for religious views are apt to attribute an overweening importance to their particular tenets, a *bigot* has come to signify a person unreasonably attached to particular opinions, and not having his mind open to any argument in opposition.—*Wedgwood, Dictionary of English Etymology*.]

Who ever is so impertinent a *bigot*, as to find fault, when the hills and dales of crooked and unequal bodies are made to meet without a miracle by some iron bodies, or some benign bolsterings?—*Jeremy Taylor, Artificial Handsomeness*, p. 60.

Religious spite, and pious spleen bred first This quarrel, which so long the *bigots* nurse. *Tate*.

In philosophy and religion, the *bigots* of all parties are generally the most positive.—*Watts*.

Bigot. adj. Bigoted. *Rare*.

The same fortune once happened to Molière, on the occasion of his *Tartuffe*, which notwithstanding afterwards has been the light in a country more *bigot* than our's, and is accounted amongst the best pieces of that poet.—*Dryden, Dedication of Limberham*.

Bigoted. adj. Blindly prepossessed in favour of something; irrationally zealous.

Presbyterian merit, during the reign of that weak, *bigoted*, and ill-advised prince, will easily be computed.—*Swift*.

With to.

Biand. s. Peninsula. *Obsolete*.

If I find various devices resorted to by the writers at the beginning of that same century to express a tract of land almost surrounded by sea, so that they employ '*biand*,' '*demi-isle*,' '*demi-island*,' I am able without much hesitation to affirm that '*peninsula*' was not yet acknowledged to be English.—*Trench, On certain Deficiencies in English Dictionaries*.

Bilander. s. [Fr. *belandre*; or Dutch, *bijlander*.] Small flat-bottomed merchant-vessel used on the coast of Holland. *Rare*.

In its progression, soon the labour'd chyle Receives the confluent rills of bitter *bile*; Which, by the liver sever'd from the blood, And striving through the gall pipe, here unload Their yellow streams. *Sir R. Blackmore*.

The *bile* in Chelonia and most reptiles is green: Hunter notices its pale yellow colour in the water-snake, and its want of bitter taste in the chameleon. Chemical researches on the nature of *bile* have been almost exclusively confined to that of Mammals, in connection with which class the chief results will be noted. The glycocholic acid is wanting in the *bile* of the boar, as in that of the dog.—*Owen, Anatomy of Vertebrates*, p. 452.

Bile. s. [A.S. *byl*.] Same as Boil, meaning abscess: (and, as far as etymology goes, the better form, though now considered vulgar).

Biliary. adj. Belonging to the bile.

Voracious animals, and such as do not chew, have a great quantity of gall; and some of them have the *biliary* duct inserted into the pylorus.—*Arbuthnot*. The lobes of the liver are subdivided into numerous and minute lobules, compactly united by

interlobular cellular tissue. The lobules themselves are composed of corpuscles, or 'acini,' occupying the meshes of the vascular network pervading the lobule; these 'acini' are larger in Reptiles than in Fishes. Their secretion finds its way into *biliary* canals, distinguishable as such, with proper walls, on the exterior of the lobule: these ducts anastomose in the interlobular spaces, and form larger canals, accompanying the hepatic vessels, and, after repeated unions, issuing, as the 'hepatic ducts,' from the portal fissure.—*Owen, Anatomy of Vertebrates*, p. 450.

Bilious. adj. Consisting of bile; partaking of bile.

Why *bilious* juice a golden light puts on, And floods of chyle in silver currents run. *Garth*. When the taste of the mouth is bitter, it is a sign of a redundancy of a *bilious* alkali.—*Arbuthnot*.

Biliousness. s. Attribute suggested by Bilious.

Blive. adv. See Blive.

Bill. s. [A.S. *bill*.—In the list called Ælfric's Vocabulary we find '*Falcastrum*, side *vel* bill = scythe *vel* bill.' This tells us that the word may have meant *scythe* as much as *ax*, or *hatchet*. Hence, it is possible (and the fact is of value as showing the state of England at the Norman conquest) that the *bills* of the English at Hastings were *scythes*. Afterwards it meant *ax* exclusively. Sir W. Temple's example, however, is not incompatible with the old meaning.] Ancient military weapon; hooked implement used in pruning, cutting hedges, &c.

Standing troops are servants arm'd, who use the lance and sword, as other servants do the sickle, or the *bill*, at the command of those who entertain them.—*Sir W. Temple*.

In the same way are related Pol. *dziob*, the beak of a bird, *dziobac*, to peck, to job, and *dziobas*, an adze; Bohem. *top*, a beak, *tipati*, to strike, *topor*, an axe.—*Wedgwood, Dictionary of English Etymology*. Add, that *beak* is a word of French origin; and that the A.S. form was *neb* = *nib*, colloquial, provincial, or obsolete.]

How now for mitigation of this bill, Urg'd by the commons? doth his majesty Incline to it, or no? *Shakespeare, Henry V. i. 1.* It may be thought a strange proposition that the bill against Duncombe was a worse bill than the bill against Penwick, because the bill against Penwick struck at life, and the bill against Duncombe struck only at property. Yet this apparent paradox is a sober truth. Life is indeed more precious than property. But the power of arbitrarily taking away the lives of men is infinitely less likely to be abused than the power of arbitrarily taking away their property.—*Macaulay, History of England, ch. xxiii.*

The violence of the storm on St. John's night threw down the battlements over the room where your Grace's manuscripts are billeted, but did no more hurt.—*Letter to Archbishop Laud, ii. 183.*

Billet. v. n. Be quartered as soldiers; lodge.

He billets in my lodgings; hath three fellow-pupils; all very civil, studious, &c.—*Dr. Prideaux to Archbishop Usher, Parr's Letters, p. 400: 1628.*

Billet-doux. s. [Fr. billet=letter, doux=sweet.] Love-letter.

'Twas then, Belinda! if report say true,
Thy eyes first open'd on a billet-doux.
Pope.

All this while Valentine's Day kept courting pretty May, who sate next him, slipping amorous billets-doux under the table, till the Dog Days (who are naturally of a warm constitution) began to be jealous, and to bark and rage exceedingly.—*Lamb, Essays of Elia, Rejoicings upon the New Year's coming of Age.*

Billiards. s. (generally plural: in the following extracts singular and adjectival.) [Fr. billard.] Game played with ivory balls impelled with sticks upon a rectangular table.

Even nose and cheek, withal,
Smooth as is the billiard-ball.
B. Jonson. When the ball obeys the stroke of a billiard-stick it is not any action of the ball, but bare passion.—*Locke.*

Butler, Hudibras.

BIN

Ah! have I caught you, my pretty doves? Whata billing, exchanging stolen glances and broken murmurs. Ah!—*Goldsmith, She stoops to conquer.*

Billingsgate. s. [from the market so called.] Language of the fish-market; vulgar scolding.

There foam'd rebellious Logic, gag'd and bound;
There stript, fair Rhetoric languish'd on the ground.

His blunted arms by Sophistry are borne;
And shameful Billingsgate her robes adorn.

But satire is nothing but ribaldry and billingsgate.—*Addison, Papers.*

This is only crying where first, to call those people conspirators who are likely to censure him for a libeller, which with his learned leaves is but in coarse figure neither, and even much better in the common billingsgate of 'You are a knave yourself to say that I am one.'—*The Parallel, An Account of the Growth of Knavery, p. 7: 1679. (Ord MS.)*

Billion. s. [Fr.] Million of millions.

In this case, however, the combination of these terms is erroneous, as it would designate a million of millions or a billion.—*Encyclopædia Metropolitana, Arithmetic, p. 97.*

There soar on high
Ten million
Billion

Sparks from the pit to gem the sable sky.
Rejected Addresses.

Billman. s. One who uses a bill or ax.

But when loud billows lash the sounding shore,
The hoarse rough verse should like the torrent roar.
Pope.

Indeed the galley, like the ancient trireme, generally kept close to the shore, and ventured out of sight of land only when the water was unruffled and the sky serene. But the qualities which made this sort of ship unfit to brave tempests and billows made it peculiarly fit for the purpose of landing soldiers.—*Macaulay, History of England, ch. xvi.*

Billow. v. n. Move as billows.

It is to this hour uncertain whether the squadron on the Pont-Neuf made the shadow of resistance, or did not make the shadow: enough, the blackbrowed Marseillaise, and Saint-Marceau following them, do cross without let; do cross, in sure hope now of Saint-Antoine and the rest; do billow on, towards the Tuileries, where their errand is.—*Carlyle, French Revolution, p. ii. b. iv. ch. vii.*

Billow-beaten. part. pref. Tossed by billows.

He, . . . sitting in his own sublimed height,

The stigma is bilobed, and consists of almost two confluent stigmas.—*C. Darwin, Fertilisation of Orchids, ch. i.*

Bimana. s. [badly formed from Latin, bis=two, manus=hand; probably from Fr. bimanus.] In Zoology. Order containing man: (as opposed to that of the Quadrupeds containing the apes, &c.)

Bimana, an order of the class Mammalia, formed to receive the genus Homo, man being the only animal that has two hands and no more; for all the other animals that have hands, as the monkeys, have in reality four hands, the lower pair of which are vulgarly called the feet.—*Hooper, Medical Dictionary.*

Bimanous. adj. Having two hands.

The comparison which I have drawn between the construction of the hand and foot, having shewn that the latter is merely calculated for support in man, we may state that he is two-handed and two-footed, or *bimanous* and *biped*.—*Lawrence, Lectures, p. 159. (Ord MS.)*

Bin. s. [A.S. binne.] Place where bread, corn, or wine is deposited.

As when from rooting in a bin,
All powder'd o'er from tail to chin,
A lively maggot sallies out,
You know him by his hazel snout.
Swift.

The most convenient way of picking hops, is into a long square frame of wood, called a *bin*.—*Mortimer*.
Whether the vintage, yet unkept,
Had relish fiery-new,
Or, elbow-deep in sawdust, slept,
As old as Waterloo;
Or stow'd (when classic Canning died)
In musty *bins* and chambers,
Had cast upon its crusty side
The gloom of ten Decembers. *Tennyson, Will Waterproof's Lyrical Monologue.*

Binary. *adj.* [Fr. *inaire*, from Lat. *binus*.]
Dual; double; constituted of two parts.

a. In Astronomy. Applied to double stars.
The relative motions of *binary* stars have proved this. When it was discovered that certain of the double stars are not optically double, but physically double, and move round each other, it was at once suspected that their revolutions might be regulated by a mutual attraction like that which regulates the revolutions of planets and satellites. The requisite measurements having been from time to time made, the periodic times of sundry *binary* stars were calculated on this assumption; and the subsequent performances of their revolutions in the predicted periods, have completely verified the assumption. — *Herbert Spencer, First Principles*, p. 475.

b. In Chemistry. Applied to compounds consisting of two elements; also to a theory which, by treating certain combinations as simple, looks upon certain compounds of parts, themselves compound, as binary.

In the language of Chemistry a *binary* compound is that resulting from the union of two elements. — *Hooper, Medical Dictionary*.

Of the supposed combinations of *binary* compounds with *binary* compounds, the most numerous and important class are salts. Sulphate of soda is commonly viewed as a direct combination of sulphuric acid and soda. An oxygen acid is allowed to exist in them, and they are particularly distinguished as 'oxygen-acid' salts. But an opinion was promulgated long ago by Davy, that these salts might be constituted on the plan of the *binary* compounds, and their hydrated acids on the plan of a hydrogen acid; a view which is supported by many analogies. — *Graham, Elements of Chemistry*, p. 161.

c. In Botany and Zoology.

The terms which he has proposed belong, as I have already said, to the terminology, not to the nomenclature, of Zoology. In the latter subject, the nomenclature (the names of species), the *binary* nomenclature established by Linnaeus remains, in its principle, unshaken, simple and sufficient. The *binary* method of nomenclature (names by genus and species) is the most convenient hitherto employed in classification. The number of species in every province of Natural History is so vast that we cannot distinguish them and record the distinctions without some artifice. The known species of plants, for instance, were ten thousand in the time of Linnaeus, and are now probably sixty thousand. It would be useless to endeavour to frame and employ separate names for each of these species. . . . The artifice employed is, to name a specimen by means of two (or it might be more) steps of the successive division. Thus in Botany, each of the genera has its name, and the species are marked by the addition of some epithet to the name of the genus. In this manner about 1,700 generic names, with a moderate number of specific names, were found by Linnaeus sufficient to designate with precision all the species of vegetables known at his time. And this *binary* method of nomenclature has been found so convenient, that it has been universally adopted in every other department of the Natural History of organised beings. — *Whewell, Novum Organon renovatum*, p. 351, 307.

Binary. s. Constitution of two.

To make two or a *binary*, which is the first number, add but one unto one. — *Fotherby, Atheomastix*, p. 307.

The inference which they drew was that, if an English king should, without any law but his own pleasure, persecute his subjects for not worshipping idols, should fling them to the lions in the Tower, should wrap them up in pitched cloth and set them on fire to light up Saint James's Park, and should go on with these massacres till whole towns and shires were left without one inhabitant, the survivors would still be *bound* meekly to submit, and to be torn in pieces or roasted alive without a struggle. — *Macaulay, History of England*, ch. ix.

Bind to. Oblige to serve; contract with anyone.

If still thou dost retain
The same ill habits, the same follies too,

Though passion be the most obvious and general, yet it is not the only cause that *binds up* the understanding, and confines it, for the time, to one object, from which it will not be taken off. — *Locke*.

Bindweed. s.

1. Plants of the genera Convolvulus and Calystegia.

2. Applied to the *Circæa lutetiana* (not a twiner).

It is called of *Lobel Circæa lutetiana*: in English Enchanter's Nightshade, or *Bindweed* Nightshade. — *Gerarde, Herball*, p. 352: ed. 1633.

Bine. s. [the connection with *bind* is probably less direct than is suggested in the extract. At any rate the connection with the Latin *vinea* = vine must be borne in mind.] See extract.

[The term *bine* or *bind* is applied to the winding or twining stem of climbing plants. Thus we speak of the hop-bine for the shoots of hops. The wood-bine designates the honeysuckle in England, while bind-wood, bin-wood, or ben-wood, is in Scotland applied to ivy. Here we see the root in the precise form of the Lith. *pinnu*, *pin-ti*, to twine. — *Wedgwood, Dictionary of English Etymology*.]

Bing. s. Same as Bin.

Like ants when they do spoil the *bing* of corn. *Earl of Surrey*. (Rich.)

Binacle. s. See Bittacle.

BINO

Binocular. *adj.* [Lat *binus* = double, in pairs, *oculus* = eye.]

1. Having two eyes.

Most animals are *binocular*, spiders for the most part octonocular, and some senocular.—*Derham*.

2. Employing both eyes at once.

When we look at an object with a *binocular* telescope, we see it single.—*Reid, Inquiry into the human Mind*.

3. In *Physiology*. (The date of the edition from which the following extract is taken is 1843; and the part from which the extract is taken is an addition of the translator's. This, along with the date, is important; inasmuch as the passage gives us the first notices of the stereoscope, the development and confirmation of the doctrine concerning the binocular character of our vision, i. e. the fact of seeing only one object when, with two retinas (eyes), we have two pictures of the external image.)

Some important observations relative to *binocular* vision have been pointed out by Professor Wheatstone.—*Dr. Baly, Translation of Müller's Elements of Physiology*, 1205.

Binomial. *adj.* [Lat. *bis* = twice, *Gr. νόμος* = law; forming a hybrid word.]

1. In *Algebra*. See extract.

The rule which determines the method of deriving the exponents and coefficients from the exponent of the given power in general, and independently of any particular value which that exponent may have, is called the *binomial* theorem; and the series thus found, which would also result from the continued multiplication by which the ordinary process of involution is conducted, is called the development of the power. . . . Newton first assigned the law by which the *binomial* development was governed, but did not give any demonstration of it. Since his time, however, the theorem has been submitted to rigorous proof.—*Encyclopædia Metropolitana, Algebra*, p. 245.

2. Same as *Binary*, in the way of botanical and zoological classification. (The better equivalent would be *binomial*; but as more than one writer has supported what is called the *Monomial* system, or method, i. e. the system of a single principle, it has become, or is becoming, current in this somewhat doubtful sense.)

To which, however, we may reply, that the *binomial* nomenclature is demanded for two elementary reasons. First, because it is founded upon a natural truth, which (to say the least) it would be unwise to violate; and, secondly, because it is convenient, both for simplification and analysis.—*T. V. Wollaston, On the Variation of Species*, ch. xv.

The notion did, at any rate, arise out of an apparent defect in the *binomial* process, for the inconveniences which they complained of are real ones; and, having felt them practically, they aspired to sweep them away by remodeling the whole system afresh.—*Ibid.* ch. vi.

Binomial. *s.* Quantity in *Algebra* consisting of two terms connected by the sign + or -.

We have hitherto considered the binomial series as representing the development only where the exponent *m* is a positive integer, and the demonstration derived from the properties of combinations; and the continued multiplication of different *binomials* evidently proceeds on that hypothesis.—*Encyclopædia Metropolitana, Algebra*, p. 252.

Binotinous. *adj.* [Lat. *binus* = double, *tonus* = tone.] Consisting of two tones.

The note of the Lesser Pettychaps is truly simple, but pleasing for the concomitant, being the first harbinger of spring. During the breeding season their *binotinous* cry is incessant, and has caused a variety of similes.—*Montagu, Ornithological Dictionary*. (Ord MS.)

Biographer. *s.* [Gr. *biog* = life, *γράφω* = write.] Writer of lives; relater, not of the history of nations, but of the actions of particular persons.

Our Grub-street *biographers* watch for the death of a great man, like so many undertakers, on purpose to make a penny of him.—*Addison, Freeholder*. The *biographer* of Horne Tooke, after some prelude about the sword-cutler of Athens, and the fuller of Arpinum, reluctantly admits that his hero was the son of a poultier in Cheapside.—*W. Cooke, History of Parity*, vol. iii. ch. viii.

He (Montesquieu) knew what no historian before him had even suspected, that, in the great march of human affairs, individual peculiarities count for nothing; and that, therefore, the historian has no busi-

BIPA

ness with them, but should leave them to the *biographer*, to whose province they properly belong.—*Buckle, History of Civilization in England*, vol. i. ch. xiii.

Biographic. *adj.* Relating to Biography.

Amid these insipid floods of tendresse, sensibilité, and so forth, rapid, like long-decanted small-beer, many a curious *biographic* tract comes to light. . . . Forgetting or conquering the species of nausea that such a business, on the first announcement of it, may occasion, and in many of the details of it cannot be confirmed, the *biographic* reader will find this well worth looking into. . . . Truly of all the wonderful illustrious persons that come to view in the *biographic* part of these six-and-twenty volumes, it is a question whether this old Laugues cutter is not the worthiest.—*Carlyle, Essays, Diderot*.

Biographical. *adj.* Same as Biographic.

It is impossible that soliloquies of such prolixity, and designed to include much historical and even *biographical* matter, should everywhere sustain a proper degree of spirit, pathos, and interest.—*T. Warton, History of English Poetry*, iii. 256.

A good deal of information, which it was not possible to introduce into this preliminary part of my work, will be found in the *biographical* notes which, here and there, accompany the correspondence.—*Kemble, State Papers, &c., Historical Introduction*, p. xlii.

Biography. *s.* Personal history of individuals.

In writing the lives of men, which is called *biography*, some authors place every thing in the precise order of time when it occurred.—*Watts*.

This, then, was the first great merit of Montesquieu, that he effected a complete separation between *biography* and history, and taught historians to study, not the peculiarities of individual character, but the general aspect of the society in which the peculiarities appeared.—*Buckle, History of Civilization in England*, vol. i. ch. xiii.

Biologic. *adj.* Relating to Biology.

The interpretation of structure, as exhibited in individual organisms and successions of organisms, is aided by two subsidiary divisions of *biologic* inquiry, named Comparative Anatomy (properly comparative morphology) and Comparative Embryology.—*Herbert Spencer, First Principles, Biology*, ch. vii.

Biological. *adj.* Same as Biologic.

While, on the one hand, there is no *biological* or historical evidence of this great depression, or of the recent separation of the islands from the main land, or from each other; so, on the other hand, is there no geological evidence of recent subsidence.—*Ansted, The Channel Islands*, p. 205.

Biology. *s.* [Gr. *biog* = life, *λόγος* = word, doctrine, description.] Investigation of the phenomena of life.

The word *Physiology*, by which they have most commonly been described, means the Science of Nature; and though it would be easy to explain, by reference to history, the train of thought by which the word was latterly restricted to Living Nature, it is plain that the name is, etymologically speaking, loose and improper. The term *Biology*, which means exactly what we wish to express, the Science of Life, has often been used, and has of late become not uncommon among good writers. I shall therefore venture to employ it, in most cases, rather than the word *Physiology*.—*Whewell, History of Scientific Ideas*, ii. 170.

There is, indeed, another mode of grouping the facts of *Biology*, with which all are familiar. According as they are facts of animal or vegetal life, they may be classed under the heads of Zoology and Botany. But this division, though convenient and indeed necessary for practical purposes, is one that does not here concern us. Dealing with organic structures and functions in connexion with their causes, conditions, concomitants, and consequences, *Biology* cannot divide itself into animal-biology and vegetal-biology; since the same fundamental classes of phenomena are common to both.—*Herbert Spencer, First Principles, Biology*, ch. vii.

Bipartite. *v. a.* Divide into two; cause to fall into two divisions. *Rare*.

These are the principles of motion wherein dextrality consists, and are *bipartited* within and without the crany.—*Sir T. Browne, Vulgar Errors*, p. 189. (Ord MS.)

Bipartite. *adj.* [Lat. *bis* = twice, *partior* = divide.] Having two correspondent parts; divided into two.

That's a remarkable instance in Sennertus, of a monster born at Emmaus with two hearts, and two heads; the diversity of whose appetites, perceptions, and affections, testified that he had two souls within that *bipartite* habitation.—*Glanville, Preexistence of Souls*, ch. ii.

His (Alexander's) empire was *bipartite* into Asia and Syria.—*Gregory, Posthuma*, p. 159. (For another example see Bifid.)

Bipartition. *s.* [L. Lat. *bipartitio*, -onis.]

q 2

BIRD

{BINOCULAR
BIRDBOLT

Act of dividing into two, or of making two corresponding parts.

Already in the Lampreys, "the first stage of this *bipartition* may be seen, and the next stage in the Sharks and Rays.—*Owen, Anatomy of Vertebrates*, 476.

Biped. *adj.* Two-footed. See, for extract, Bimanous.

Biped. *s.* [Lat. *bipes*; from *bis* = twice, *pes, pedis* = foot.] Animal with two feet.

No serpent, or fishes oviparous, have any stones at all; neither *biped* nor quadruped oviparous have any exteriorly.—*Sir T. Browne, Vulgar Errors*.

I allude to the class Aves, characterised as accurately, as briefly, by the name of 'feathered *bipeds*': *bipeds*, because the anterior members are exclusively organised for flight; feathered, because the body which is to soar in air must be lightly clad, and yet warmly clad, &c.—*Owen, Lectures on the Comparative Anatomy of Vertebrate Animals*, introd. lect.

Animal was by them considered a genus; and man and brute co-ordinate species under that genus; *biped* would not have been admitted to be a genus with reference to man, but a proprium or accident only. It was requisite, according to their theory, that genus and species should be of the essence of the subject. Animal was of the essence of man; *biped* was not. And in every classification they considered some one class as the lowest or infima species.—*Mill, System of Logic*, 136.

Bipennated. *adj.* [Lat. *bipennatus* = two-winged.] Having two wings.

All *bipennated* insects have poises joined to the body.—*Derham*.

Biquadratic. *adj.* Relating to the fourth power in algebra.

Thus a *biquadratic* equation may be formed, whereby the point *h* shall be found, and thence the point *D*, whose distance from *A* is to *h* as the eccentricity of the earth's orbit to half its axis.—*Philosophical Transactions*, liii. 528.

Birch. *s.* [A.S. *birc*.] Tree of genus *Betula*.

On the green slope

Of a romantic glade we sat us down,
Amid the fragrance of the yellow broom,
While o'er our heads the weeping *birch* tree stream'd
Its branches, arching like a fountain shower.

Wilson, *Isle of Palms*.

Birchen. *adj.* Made of birch.

By this hand, I'll cry brooms in't, *birchen* brooms.

—*Beaumont and Fletcher, Loyal Subject*.

His beaver'd brow a *birchen* garland bears. Pope.

Bird. *s.* [A.S. *bird*, or *brid* = chicken.]

General term for the feathered kind; fowl: (*fowl* is colloquially used for the larger, and *bird* for the smaller, kind of feathered animals).

[A.S. *brid*, the young of birds; *earn* *brid*, an eagle's young; *G. brut*, a brood or hatch of young. We find the use of the word in this original sense as late as Shakespeare.

'Being fed by us you used us so,

As that ungentle gull the cuckoo's *bird*

Useth the sparrow.' (H. IV. v. sc. 1.)

The proper designation of the feathered creation is in *B. fowl*, which in course of time was specially applied to the gallinaceous tribe as the most important kind of bird for domestic use, and it was perhaps this appropriation of the word which led to the adoption of the name of the young animal as the general designation of the race. A similar transfer of meaning has taken place in . . . Fr. *poule*, a gallinaceous bird; *E. poultry*, from *lat. pullus*, the young of an animal.—*Wedgwood, Dictionary of English Etymology*.]

The poor wren,

The most diminutive of *birds*, will fight,

Her young ones in her nest, against the owl.

Shakespeare, *Macbeth*, iv. 2.

Hence men and beasts the breath of life obtain,

And *birds* of air and monsters of the main. Dryden.

is so like in taste, that the scrupulous are allowed

them on fish days.—*Locke*.

To be generous and of free disposition, is to take those things for *birdbolts*, that you deem cannon bullets.—*Shakespeare, Twelfth Night*, i. 5.

As when you descry

A ship, with all her sail contends to fly

Out of the narrow Thames with winds unapt,

Now crosseth here, now there, then this way rapt,

And then hath one point reached, then alters all,

And to another crooked reach doth fall.

Birdlike. *adj.* Resembling a bird.

For when I see how they do mount on high,
Waving their outstretch'd wings at liberty;
Then do I think how *bird-like* in a cage
My life I lead, and grief can never suage.

Nicolas, Mirror for Magistrates, p. 653.
A rich store of classical knowledge—a sense of the beautiful, almost verging on the effeminate—a facile power of melody, varying from the solemn stops of the organ to a *birdlike* flutter of airy sound—the glorious faculty of poetic hope, exerted on human prospects, and presenting its results with the vividness of prophecy: a power of imaginative reasoning which peopled the nearer ground of contemplation with thoughts . . . 'gorgeous as the sun at midsummer,' endowed the author of 'The Ancient Mariner,' and 'Christabel.'—*Talfourd, Memoirs of C. Lamb.*

Birdlime. *s.* Glutinous substance spread upon twigs, by which the birds that light upon them are entangled.

Birdsnest. *s.* Orchidaceous plant so called (*Neottia Nidus-avis*; where *nidus* = nest, *avis* = bird).

I made numerous observations on this, the *birdsnest* orchis, but they are not worth giving, as the action and the structure of every part are almost identically the same as in *Listera ovata*. This unnatural, sickly-looking plant has generally been supposed to be parasitic on the roots of the trees under the shade of which it lives; but, according to Irmich, this certainly is not the case.—*C. Darwin, Fertilisation of Orchids, ch. iv.*

Birmingham. *s. and adj.* See *Brunnagem.* *Rare.*

Birmingham had not been thought of sufficient importance to return a member to Oliver's Parliament. Yet the manufacturers of Birmingham were already a busy and thriving race. They boasted that their hardware was highly esteemed, not indeed as now, at Pekin and Lima, at Bokhara and Timbuctoo, but in London, and even as far off as Ireland. They had acquired a less honourable renown as coiners of bad money. In allusion to their spurious groats, some Tory wit had fixed on demagogues, who hypocritically affected zeal against Popery, the nickname of *Birmingham*.—*Macaulay, History of England, ch. iii.*

The king's health being called for after this, a notable dispute arose between the Twelfth of August (a zealous old Whig gentlewoman) and the Twenty-third of April (a new-fangled lady of the Tory stamp), as to which of them should have the honour to propose it. August grew hot upon the matter, affirming time out of mind the prescriptive right to have lain with her, till her rival had basely supplanted her; whom she represented as little better than a kept mistress, who went about in fine clothes, while she (the legitimate *birthday*) had scarcely a rag, &c.—*Lamb, Essays of Elia, Rejoicings upon the New Year's coming of Age.*

Birtdom. *s.* Domain, country, repose, or anything to which one is born. *Rare.*

Birtright. *s.* Rights and privileges to

which a man is born; right of the firstborn.

Thy blood and virtue

Contend for empire in thee, and thy goodness

Milton, Paradise Lost, iii. 308.

To say that liberty and property are the *birtright* of the English nation, but that if a prince

invades them by illegal methods, we must upon no

pretence resist, is to confound governments.—*Addison.*

The partisans of the House of Austria dwell on

the sacredness of treaties; the partisans of France

on the sacredness of *birtright*.—*Macaulay, History of England, ch. xxiii.*

Birthing-song. *s.* Song sung at the nativity of a person. *Rare.*

Biscuit. *s.* [Fr. *biscuit* = twice cooked; the German, in like manner, being *zwieback*, and the Danish *tvebak* = two bakings.]

1. Kind of hard dry bread, made to be carried to sea: (baked for long voyages four times).

The *biscuit* also in the ships, especially in the

Spanish galleys, was grown hoary and unwholesome.—*Knolles, History of the Turks.*

Many have been cured of dropsies by abstinence from drinks, eating dry biscuit, which creates no thirst, and strong frictions four or five times a day.—*Arbutnot, On the Nature and Choice of Aliments.*
As well might a man distinguish objects through a prism, that presents nothing but a variety of colours to the eye, or a maid pining in the green sickness prefer a biscuit to a cinder.—*Goldsmith, Essays, 13.*

The country, many miles round, was swept bare by these detachments, and a considerable quantity of cattle and fodder was collected within the walls. There was also a large stock of biscuit imported from France.—*Macaulay, History of England, ch. xvii.*

Archimedes first employed polygons of six sides; then, by bisecting each, he obtained two others of twelve, then of twenty-four, forty-eight, and lastly of ninety-six.—*Encyclopædia Metropolitana.*

[In some of the older works the *s* is doubled in the derivatives, though kept single in the simpler form: e.g. in Rees's *Cyclopædia* we find *bissection*, but *bisect*.]

Biserial. adj. In a double series.

In a few fishes these folds are further complicated by secondary processes. The Sturgeon presents the radiated type of the olfactory organ with secondary folds, but, like the Polypterus and Lepidosteus, each nasal sac has a double aperture: the Lepidosteus has an elongated nasal sac, with the biserial arrangement of pituitary folds, and with two apertures upon the under part of the thick upper lip, but neither of these communicate with the mouth.—*Owen, Anatomy of Vertebrates.*

Bisexual. adj. Of two sexes. *Rare.*

Thus may we also concede that hares have been of both sexes, and some have ocularily confirmed it; but that the whole species or kind should be bisexual we cannot affirm, who have found the parts of male and female respectively distinct and single in any wherein we have enquired.—*Sir T. Browne, Vulgar Errors, p. 149. (Ord MS.)*

Bishop. s. [A.S. *bisceop*; from Lat. *episcopos*, Gr. *ἐπίσκοπος* = overseer, from *ἐπί* = on, *σκοπέω* = see, look.] One of the head order of the clergy.

A bishop is an overseer, or superintendent of religious matters in the Christian church.—*Ayliffe, Parergon Juris Canonici.*

Their zealous superstition thinks, or pretends, they cannot do God a greater service than to destroy the primitive, apostolical, and anciently universal government of the church by bishops.—*King Charles.*

In case a bishop should commit treason and felony, and forfeit his estate with his life, the lands of his bishoprick remains still in the church.—*South.*

On the word bishop, in French évêque, I would observe, that there is no natural connexion between the sacred office and the letters or sound; for évêque and bishop signify the same office, though there is not one letter alike in them.—*Watts, Logic.*

[*Bishop*, Lat. *episcopus*, from Gr. *ἐπίσκοπος*, an overseer, overlooker. When compared with Fr. *évêque*, it affords a remarkable proof how utterly unlike the immediate descendants of the same word in different languages may become. *Episcopus*; It. *vescovo*, Fr. *evêque*, *évêque*.—*Wedgwood, Dictionary of Etymology.*]

Bishop. s. [?] Mixture of burnt wine, oranges, lemons, and sugar. *Colloquial.*

He would persuade us that the succession and divine right of bishopdom hath been unquestionable through all ages.—*Milton.*

Bishoping. verbal abs. [the verb *bishop* is probably the commoner form, enabling us to say that the 'horse was bishoped,' or that a dealer was given to *bishop* his horses: in the extract, however, which either supplies or suggests the derivation, the word is a noun.] See extract. *Technical.*

Bishoping, in horse-dealing, is a term probably derived from *Bishop*, the name of a horse-dealer, and denoting a trick of the dealers in horses for making them appear younger than they are, with a view of imposing on the purchaser. This is done by excavating the corner tooth of the incisors with a steel graver or file, and afterwards blackening the cavity with a hot iron. This mark, or excavation, is deemed by many the criterion of age, and that the horse is young while this is preserved.—*Rees, Cyclopædia, in voc.*

Bishoplike. adj. Belonging to, or becoming, a bishop.

He hath nothing directly to prove that Peter did excel the other apostles in bishoplike authority.—*Fulke, Retentive, p. 249.*

Bishoply. adj. Same as Bishoplike. *Obsolete.*

To you I commit this business, that both by bishoply censure, and kingly authority, filthy livers may be cast out of the church.—*Weever, Ancient Funeral Monuments of Great Britain, Ireland, and Islands adjacent.*

Nothing will illustrate this so well as a comparison of different words of the same family, which have at different periods been introduced into our language. We shall find that those of an earlier introduction have become English through and through, while the later introduced, belonging to the same group, have been very far from undergoing the same transforming process. Thus 'bishop,' as old as the introduction of Christianity into England, though not hiding its descent from 'episcopos,' is thoroughly English, while 'episcopal,' which has supplanted 'bishoply,' is only a Latin word in an English dress.—*Trench, On the Study of Words, lect. iv.*

Bishopric. s. [as the word *rice* = kingdom, jurisdiction, is now obsolete, the word *bishopric* looks like a derived, rather than a compound, word.] Diocese, or jurisdiction, of a bishop.

It will be fit, that, by the king's supreme power in causes ecclesiastical, they be subordinate under some bishop and bishoprick of this realm.—*Bacon, Advice to Villiers.*

A virtuous woman should reject marriage, as a good man does a bishoprick; but I would advise neither to persist in refusing.—*Addison, Spectator.*

Those pastors had episcopal ordination, possessed preferments in the church, and were sometimes promoted to bishopricks themselves.—*Swift, Sentiments of a Church of England Man with respect to Religion and Government.*

The Grecians call it *ἀμμή*, the Latines also *Ammi*; divers call it *Cuminum*, *schopicum*; others *Cuminum regium* or *Comin Royall*; in shops *Ammites* or *Amoes*; the Germans *Amey*; in English *Amoes* or *Ammi*; of some Herbe-William Bullwort, and *Bishops-weed*.—*Gerarde, Herball, p. 1037: 1633.*

But hungry sups his cream, serv'd up in earthen dish. *King.*

Bismuth. s. [Ger.] Metal so called.

Bismuth, a yellowish or slightly reddish white metal, which is brittle and fusible at a low temperature, when compared with other metals. An alloy of eight parts *bismuth*, five of lead, and three of tin, will melt at a lower temperature than that of boiling water.—*Encyclopædia Metropolitana, in voc.*

Bismuth generally occurs in the metallic state, and is separated from the gangue or accompanying rock by fusion. It may be prepared in a state of purity for chemical purposes, by reducing with charcoal the oxide of *bismuth* obtained by igniting the subnitrate.—*Graham, Elements of Chemistry, p. 597.*

The year of the sun consisteth of three hundred and sixty-five days and six hours, wanting eleven minutes; which six hours omitted, will, in time, deprave the compute; and this was the occasion of *bisséxtile*, or leap year.—*Sir T. Browne.*

Towards the latter end of February is the *bisséxtile* or intercalary day: called *bisséxtile*, because the sixth of the calends of March is twice repeated.—*Holder, Discourse concerning Time.*

Bistort. s. [Lat. *bis* = twice, *tortus* = twisted: see extract.] Plant so called (*Polygonum Bistorta*).

Broad-leaved snakeweed hath many uneven leaves, smooth and very Greene, among which rise up small brittle stalks of two handes high, bearing at the top a faire spike of floures like unto the great *bistort*. The root is knobby bunched, crookedly turned or wrythed this way and that way, whereof it took its name *Bistorta*.—*Gerarde, Herball, p. 399: ed. 1633.*

Bistoury. s. See extract.

Bistoury, Fr. *bistouri*, in Surgery, a small knife, either straight or crooked, single or double edged, round-pointed or probe-pointed. [The *bit*] signifies the whole machine of all the iron appurtenances of a bridle, as the *bit-mouth*, the branches, the curb, the sevil holes, the tranchefil, and the cross-chains; but sometimes it is used to signify only the *bit-mouth* in particular.—*Furrier's Dictionary.*

Bitch. s. [A.S. *bicca*, *bicce*.—When used alone it means a female dog; but as, either in composition or combination, it can be used adjectively, it may precede certain other substantives, as *fox*, *wolf*, &c., giving *bitch-fox* = vixen, to which it is more especially applied. *Bitch-wolf* is rarer, and gives two words rather than a compound.

BITE BITTINESS }

BITE

With animals not belonging to the dog-kind, it has no place.]

1. Female of the canine kind: (wolf, fox, &c.) At his feet a *bitch* wolf suck did yield To two young babes. *Spenser*.

[The word has been formed from those mean and dirty dependants, in great houses, who were selected to carry coats to the kitchen, halls, &c. To this smutty regiment, who attended the progresses, and rode in the carts with the pots and kettles, which, with every other article of furniture, were then moved from palace to palace, the people, in derision, gave the name of *black guards*, a term since become sufficiently familiar, and never properly explained.—Gifford, *Notes on Ben Jonson*, ii. 169, vii. 250.]

The word is well explained in a proclamation of the Board of Green Cloth in 1683, cited in N. and Q., Jan. 7, 1854. 'Whereas of late a sort of vicious idle and masterless boys and rogues, commonly called the *Black-guard*, with divers other lewd and loose fellows, vagabonds, vagrants, and wandering men and women, do follow the Court to the great dishonour of the same.—We do strictly charge all those so called the *Black-guard* as aforesaid, with all other loose idle masterless men, boys, rogues and wanderers, who have intruded themselves into his Majesty's court and stables, that within the space of 24 hours they depart.'—Wedgwood, *Dictionary of English Etymology*.

The following formation is evidently colloquial.

Strike out those words which are now obsolete, and I will venture to say that I will replace every one of them by words still in use out of Chaucer himself, or Gower his disciple. I don't want this myself: I rather like to see the significant terms which Chaucer unsuccessfully offered as candidates for admission into our language; but surely so very slight a chance of the text may well be pardoned, even by black-letterers, for the purpose of restoring so great a poet to his ancient and most deserved popularity.—Coleridge, *Table Talk*.

I think it fit to communicate, that being this last autumn at Bristol, in August, the tide brought in floating some of the vesicularious sea-wrack. or a tongue of metal, cast with the blade itself, is formed into a hilt by a piece of wood laid on it, thickened with a bit of leather or bone. Hilt and blades are often adorned with the most tasteful figures, and here and there these figures appear to be the stamp, as it were, of different nations. The most remarkable circumstance is the shortness of the hilt. The blade also measures on an average from twenty-two to twenty-three inches.—*Kemble, Introduction to Hraa Ferales*, p. 48.

verse shall halt for it.—*Shakespear, Hamlet*, ii. 2.

Hannibal Caro's, in the Italian, is the nearest,
the most poetical, and the most sonorous of any trans-

vantage of *blank* verse, he commonly allows two
lines for one in Virgil, and does not always hit his
sense.—*Dryden.*

To Tragedy, and rarely quits her side.

Though mad Almanzor rhymed in Dryden's days,
No sing-song hero rants in modern plays.

Finally, Milton's *blank* verse, both for its rich and
varied music and its exquisite adaptation, would, in
itself, almost deserve to be styled poetry without the
words.—*Id.*

Indeed, out of the drama, he is still our
only great *blank* verse writer. Compared with his,
the *blank* verse of no other of our didactic or nar-
rative poets, unless we are to except a few of the
happiest attempts at direct imitation of his pauses
and cadences, reads like anything else but muffled
rhyme—rhyme spoiled by the ends being blunted or
broken off. Who remembers, who can repeat, any
narrative *blank* verse but his?—*Craik, History of English Literature*, ii. 81.

Blank. *s.*

were performing.—*Macaulay, History of England*,
ch. xxiv.

Blarney. s. [see extract.] Flattery. Colloquial.

He who has kissed the Blarney stone is assumed to be endowed with a fluent and persuasive tongue, although it may be associated with insincerity; the term *blarney* being used to characterise words that are meant neither to be 'honest nor true.' It is conjectured that the comparatively modern application of the term *blarney* first had existence [at the close of the 16th century] when Lord Clancarty was a prisoner to Sir George Carew, by whom he was required to prove his loyalty by surrendering his stronghold [Blarney Castle] to the soldiers of the Queen. This act he always endeavoured to evade, but as invariably professed his willingness to perform it. The curious traveller will seek in vain for the real stone unless he allows himself to be lowered from the northern angle of the lofty castle, when he will discover it about twenty feet from the top, with this inscription: 'Cormac McCarthy fortis me fieri fecit.'—*Hall, Ireland, its Scenery, Character, &c.* i. 48.

2. Irreverent with regard to men. *Obsolete*.

Blasphemy. s.

1. Evil-speaking in general.

As to the judgment of Cato the Censor, he was well punished for his *blasphemy* against learning; in the same kind wherein he offended: for when he was past threescore years old, he was taken with an extreme desire to go to school again, and to learn the Greek tongue, to the end to peruse the Greek authors; which doth well demonstrate, that his former censure of the Grecian learning was rather an affected gravity, than according to the inward sense of his own opinion.—*Bacon, Advancement of Learning*, i. (Ord MS.)

Intrinsic goodness consists in accordance, and sin in contrariety, to the secret will of God; or else God could not be defined good, so far as his thoughts and secrets, but only superficially good, as far as he is pleased to reveal himself, which is perfect *blasphemy* to imagine.—*Hammond*.

To substitute a law for that direct agency, to interpose in any way between the Spirit of God and the spirit of man, was impiety, *blasphemy*, a degradation of God and of his sole sovereignty.—*Milman, History of Latin Christianity*, b. ii. ch. ii.

Whig ranks. Trevor, Seymour, and Leeds were all

The meaning of the root *bl-h* seems to have
been in the first instance loss of natural
colour, whence discolouration on the side
of either darkness or lightness. Hence,
black, Ger. *bleich*, Dan. *bleg* (pale), *bleach*
(whiten), and *bleak* are all connected.]

So were I equal'd with them in renown!
Blind Thamyras, and *blind* Meonides.

Milton, Paradise Lost, iii. 33.
There is a class of names called 'privative.' A privative name is equivalent in its signification to a positive and a negative name taken together; being the name of something which has once had a particular attribute, or for some other reason might have been expected to have it, but which has it not. Such is the word *blind*, which is not equivalent to 'not seeing,' or to 'not capable of seeing,' for it would not, except by a poetical or rhetorical figure, be applied to stocks and stones. A thing is not usually said to be *blind*, unless the class to which it is most familiarly referred, or to which it is referred on the particular occasion, be chiefly composed of things which can see, as in the case of a *blind* man, or a *blind* horse; or unless it is supposed for any reason that it ought to see; as in saying of a man, that he rushed *blindly* into an abyss, or of philosophers or the clergy that the greater part of them are *blind* guides. The names called privative, therefore, connote two things: the absence of certain attributes, and the presence of others, from which the presence also of the former might naturally have been expected.—*Mill, System of Logic, i. 44.*

2. Intellectually dark; unable to judge; ignorant: (with *to*).

Hast thou but Janus like, a face behind,
To see the people, what play months they make;
To mark their fingers pointed at thy back! *Dryden.*

He pulls his crimes upon his people's head.

3. Unseen; out of the public view; private (generally with some tendency to contempt or censure); not easily discernible; hard to find; dark; obscure; unseen.

quickly. It is doubtful, however, whether

any of the authors usually quoted knew

the word as one of common use; and it

is likely it had become archaic before the

time of Spenser. It was probably connected,

at a very early date, with *life*, and

supposed to have meant, to *be alive*; with

which it has nothing to do. It is the Ger-

man *bleiben* = stay, and the Danish *blive* =

become.] Quickly; at once.

which they were to be applied was the protection of working parties and small detachments during construction of more permanent defences; as the rebels are without carcasses, or liquid fire-bell, other scientific implements of destruction, it is probable that they may answer their purpose well.—*G. Blond. adj. [see extract.] Having a blond complexion.

The look of gloomy vexation on Godfrey's *blond* countenance was in sad accordance.—*Silas Marner*, ch. iii.

[Diez suggests that the word may be a nasalised form of Icel. *blaud*, Dan. *blød*, soft, weak, in the sense of a soft tint, a supposition which is apparently supported by the use of the word *blöde* in Austria for a weak, pale tint. (Schmid.) It is certain that we have in E. *blunt* a nasalised form of the foregoing root. But it is probably not to this root that *blond* is to be referred, but to the Pol. *blady*, pale, wan, It. *biado* (of which the evidence exists in *biadetto*, bluish, *biadare*, to grow pale. See *Blue*), blue, pale; *biavo*, blue, straw-coloured. (Diez, Florio.) O. Fr. *blois*, *blot*, blue; *blot*, blond, yellow, blue, white. (Roquefort.) BLINK }
BLOCK }

BLIN

shine, to glitter; *G. blinken*, to twinkle, shine, glitter, and also to wink, as the result of a sudden glitter. . . . To *blink* the question is to shut one's eyes to it, to make oneself wilfully *blind* to it. A horse's *blinkers* are the leather plates put before his eyes to prevent his seeing. . . . To *blench* is sometimes used in the sense of *blinking* one, to make him feel blank, to *For* *comfit*, confound him. . . . At other times it is synonymous with *blink*, to wink the eye, shrink from a dazzling light, boggle at something, start back. . . . In the same way we have *finch*, *quinch*, and *winch*, or *winch*, the fundamental meaning of each of which is rapid vibration, and thence an involuntary start. To *finch* is the equivalent of the *Du. flinken*, *G. flinken*, to glitter; *flink*, quick, active; to *quinch*, of *Du. quinken*, *micare*, *motitare* (Kil.); while *winch* or *winch* is a modification of *wink*, the vibration of the eyelids.—*Wedgwood, Dictionary of English Etymology.*

Bliss. *v. a.* (In the extract the phrase seems to mean *laid about him*. The word has been derived from the French *bless* = wound. I give it because I find it in the previous edition; not because I can explain it.)

The villain . . .
with his club him all about so *bliss*.
That he which way to turne him scarcely wist.

Spenser, Faerie Queen, vi. 8, 13.

Bliss. *v. a.* (The following extract is given for the same reason as the preceding. *Wounded* here certainly makes sense, and it has been suggested as a meaning. The original, however, is *cundo me santiguaron los hombros* (pt. i. ch. xv) = when they made the sign of a cross over my shoulders. This puts *bless* out of the question.)

They *bliss* my shoulders with their pines in such sort, as they wholly depriv'd me of my sight and the force of my feet together.—*Shelton, Translation of Don Quixote*, i. 3, 1.

Blite. *s.* [Lat. *blitum*.] Plants of the genus *Chenopodium*. (What the old woman meant, in the first extract, was probably a small joke on the words *blite* and *blight*.)

I have heard many old wives say to their servants

Are widow'd. *Frosty blasts deface*

Blive. *adv.* [The common meaning of the word is *quickly*, at once. Its derivation, however, is from A.S. *belifan* = stay. The sequence of ideas seems to have been: (1) stay a little; (2) all in good time; (3) quickly. It is doubtful, however, whether any of the authors usually quoted knew the word as one of common use; and it is likely it had become archaic before the time of *Spenser*. It was probably connected, at a very early date, with *live*, and supposed to have meant *to be alive*; with which it has nothing to do. It is the German *bleiben* = stay, and the Danish *blive* = become.] Quickly; at once.

On the other hand, it may be named from the livid mark produced by a blow on the body. Du. *blaeuw*, blue, livid; *blaeuwen*, *blowen*, to strike; *blauwel*, a beater. (Kil.) Pl. D. *blawels*, livid marks. Fris. *biadela* and *blawelsa*, wound and bruise. 'Si quis alium ad sanguinis effusionem vel livorem vulgo *blawe* dictum inserit.' the younger, The Poor Gentleman, iii. 3.*

Blown upon. Made stale; rendered disrepu-
table. (The connection between the ideas of
blowing and blasting, or blighting, explains
this meaning; and it is probable that it

or upon, which was first used to express
tainting. On the same principle the participle
Flyblown is far commoner than the
simple verb Flyblow.)

I am wonderfully pleased when I meet with any

passage in an old Greek or Latin author, that is not
blown upon, and which I have never met with in
any quotation.—*Addison.*

therefore forced to give up hopes of catching the
steward.—*Macaulay, History of England, ch. iii.*

Blowze. v. a. Make blowzy.

the church is two miles off; and I protest I don't
like to see my daughters trudging up to their pew
all blowzed and red with walking, and looking for all
the world as if they had been winners at a smock
race.—*Goldsmith, Vicar of Wakefield, ch. x.*

It was in this manner that my eldest daughter was
hemmed in and thumped about, all blowzed, and in
spirits, and bawling for fair play, fair play, with a
voice that might deafen a ballad-singer, when, con-
fusion on confusion, who should enter the room
but our two great acquaintances from town, Lady
Blarney and Miss Carolina Wilhelmina Skeggs.—
Ibid, ch. xi.

Blowzy. adj. [the spelling of this word is phonetic rather than etymological; cognate forms being with s, Dut. blosaert, Dan. blysse = glow. Still it is Johnson's, and as the word is colloquial, if not vulgar, it stands as he left it. The z, as denoting a broader sound than s, echoes better to the sense and to the actual pronunciation.] Having the glow of rude health.

Merner, ch. xi.*

consists of the fat, the *blubber*, and the oil, of powerful and ferocious animals.—*Buckle, History of Civilization in England*, p. 67.

2. Certain Actiniae so called, chiefly of the genus *Medusa*.

This has given birth to a distinction of them into two classes, which is as old as Aristotle, those of the one being such as move in the open sea, called by later writers *Urticae solutae*, and referred by Linnaeus to the genus *Medusa*, and denominated by the common people *Sea Jellies* and *Sea Blubbers*; and those of the other such as are fixed to rocks, and were supposed always to remain immovably in the same place, which belong to the Actinia of Linnaeus.—*Rees, Cyclopaedia*.

8. **Blubbered**: (i.e. used as either an adjective or the first element in a compound).

If out of the same author I should describe the devils of Crowland (with their *blubber-tips*, fiery mouths, scaly faces, beetle-heads, sharp teeth, long chins, hoarse throats, black skins, hump shoulders, big bellies, burning loins, bandy legs, tailed buttocks, &c.), which formerly haunted those places and very much annoyed Guthlacus and the monks, you would laugh at the history, and much more at my madness in relating it.—*Camden, Britannia*, i. 421.

[This word seems directly formed by imitation, and is intended to represent the noise made by a mixture of air and liquid shaken together, or spluttering out together, whence the sense of bubble, froth, foam. 'The water blubbers up.' (Baker, Northamptonshire Gl.)

'And at his mouth a blubber stode of fume.'

(Chaucer.)

Hence the modern application to the coating of fat with which the whale is enveloped, consisting of a network or frothy structure of vessels filled with oil.—*Wedgwood, Dictionary of English Etymology*.

Thou sing with him, thou booby! I never pipe

Was so profan'd, to touch that *blubber'd* lip.

Dryden.

- Blubbering. verbal abs.** Act of one who blubbers.

He was angry, and said, 'Who would have you otherwise, you foolish slut? Cease your *blubbering* . . . Go take a walk in the garden and don't go in till your *blubbering* is over.'—*Richardson, Pamela*, let. 2.

- Bludgeon. s.** [?] Short stick, with one end loaded: (used as an offensive weapon).

'Why, to say the truth,' I replied, 'I am rather under the influence of blue devils this morning, and your visit is like a sunbeam in November.'—*Sir E. L. Bulwer, Pelham*, ch. xx.

But where is our hero? Is he forgotten? Never! But in the dumps, blue-devils, and so on. A little bilious, it may be, and dull. He scarcely would amuse you at this moment. So we come forward with a graceful bow—the Jack Pudding of our doctor, who is behind.—*Disraeli the younger, The young Duke*, ch. v.

- Bluebell. s.** This name applies to two British plants, each blue, and each, though in a different way, resembling a bell. The one, *Campanula rotundifolia*, which flowers at the close of summer, is also called the hare (i.e. heather) bell, and this makes it convenient to restrict the name, as much as possible, to the second plant, though less bell-like. This last is the *Scilla nutans*, or *Agrophis non-scripta*, the common wild hyacinth, as it is sometimes called, which flowers in the spring.

Or when little airs arise,

How the merry bluebell rings

To the mosses underneath?

Tennyson.

When side by side, and hand in hand, we strayed Along the greenwood and the rivulet, Deeming each copse a paradise, that roofed The primrose and the bluebell.

[see extract.] Literary lady.

About the year 1781, it was much the fashion for several ladies to have evening assemblies, where the fair sex might participate in conversation with literary and ingenious men, animated by a desire to please. These societies were denominated *Blue-Stocking Clubs*; the origin of which title being little known, it may be worth while to relate it. One of the most eminent members of those societies, when they first commenced, was Mr. Stillingfleet, whose dress was remarkably grave, and in particular it was observed that he wore blue stockings. Such was the excellence of his conversation, that his absence was felt as so great a loss, that it used to be said, 'We can do nothing without the blue stockings'; and thus by degrees the title was established.—*Boswell*, viii. 86.

In the following extract it is two words; the division being determined by the contrast between the two blues. That this is not unfrequent in Byron may be seen under *Bluebottle*.

Contented, when translated, means but cloy'd;

And hence arise the woes of sentiment,

Blue devils, and blue stockings, and romances

Reduced to practice, and perform'd like dances.

There is also at Cabo Corso a publick Fetish, the guardian of them all; and that is the rock Tabra, a bluff peninsular prominence that juts out from the bottom of the cliff the castle stands on, making a sort of cover for landing, but so unsafe as frequently to expose the boats and people to danger, the sea breaking over with great force.—*Adkins, Voyage*, p. 102.

[Before attempting to explain the formation of this word, it will be well to point out a sense, so different from that in which it is ordinarily used, that it is not easy to discover the connexion. Bare and blunt, naked, void.

'It chaunst a sort of merchants which were wont To skimp those coasts for bondmen there to buy— Arrived in this isle through bare and blunt To inquire for slaves.' (F. Q.)

The large plains— Stude blunt of beists and of treis bare.' (D. V.) A modification of the same root, without the nasal, appears with the same meaning in Swiss blunt, naked, bare, unfledged; Sv. blott, G. bloss, It. biotto, bionso, naked, poor; Sc. blott, blatt.

We have then the expressions mit etwas heraus-plätzen, or heraus-plumpen, to blunt a thing out, to blurt, blunder, or blab out a thing (Küttner); to bring it suddenly out, like a thing thrown down with a noise, such as that represented by the syllables blantsch, plotz, plump; to plump out with it. Swab. plätzen, to throw a thing violently down. Peradventure it were good rather to keep in good silence thyself than blümt forth rudely.' (Sir T. More in Richardson.)

The term blunt is then applied to things done suddenly, without preparation. Fathers are Won by degrees, not blümtly as our masters Or wronged friends are.' (Ford in R.)

A blunt manner is an unpolished, unceremonious manner, exactly corresponding to the G. plump. . . . Then, as a wet lump lies where it is thrown, it is taken as the type of everything inactive, dull, heavy, insensible, and these qualities are expressed by both modifications of the root, with or without the nasal, as in E. blunt, Sc. blait, dull, sheepish. 'Then cometh indolence, through which a man is so blunt, and hath swiche languor in his soul, that he may neither rede nesing in holy chirche.' (Chaucer, in Richardson.)

'We Phemicians nane sa blait breistlis has.' (D. V.) 'Non obtusa adeo gestantibus pectora Feni.' 'A blade reason' is used by Pierce Plowman for a pointless, ineffectual reason. Thus we are brought to what is now the most ordinary meaning of the word blunt, viz. the absence of sharpness, the natural connexion of which with the qualities above mentioned is shown by the use of the Latin obtusus in the foregoing passage.—*Wedgwood, Dictionary of English Etymology.*

[As this is the last word beginning with
Bl, a few remarks may be made on the
combination. It is one which supplies an
unusually great number of words formed
on the imitative or onomatopoeic principle;
the principle which associates certain ideas
with certain physical sounds, and which is
well illustrated by words like Hum, Buzz,
Whizz, Bizz, Hiss, &c.; where the sound
evidently, to use a well-worn illustration,
echoes to the sense.

The sound of *b* is labial, or formed
mainly by the lips. It is vocal, or sonant,
as opposed to those of *p* and *f*; which are
surd or uttered as whispers. It is explosive
(i. e. it cannot be prolonged), as opposed to
those of *f* and *v*.

In the expression of any notion con-
nected with the sound of *bubbles*, the initial
b is a natural element; whether it denotes
their formation or their breaking. The
extent of its application (i. e. the question
as to the number of ideas which may be
deduced from the physical sounds under
notice) is another matter. That hurried
and loose language is one of them seems
to be generally admitted. Hence few have
objected to words like Bleb, Blob, Blab,
and the derivatives which can undoubtedly
be connected with them, being treated as
words of which the origin is clearly phys-
ical.

The same origin is, perhaps, generally
allowed to certain words of a similar im-
port ending in *d*: at any rate, the notion
of a vesicle is common to the words Bleb
and Bladder; and the notion of loose talk
to the words Blab, Blether and Blother in
Scotch and old English, and Plaudern, &c.,
in German.

The idea of *blowing* gives us another
physical sound, the origin of numerous
admitted onomatopoeic derivatives. The
present *w* represents a *v*, which also,
as shown by *flavi*, belonged to Latin *flo*;
where the explosive labial *b* has for its
equivalent the corresponding continuous *f*.

With a final sibilant (expressive of a
hiss) we get Blaze denoting a rush of
flame, and Blast one of wind with the
blighting effects of flame, a word evidently
connected with Bluster, and, perhaps, with
Blare.

For Blot Mr. Wedgwood thinks we
have, at the bottom, a name for the falling
of a drop of liquid.

In Bleat, as in Baa, the word is purely
imitative in the strict sense of the term;
upon which more is said in the Preliminary
Notice.

How much ground these onomatopoeias
cover is a question upon which, probably,
no two writers would agree; but it is also
a question of which we may now take
leave, as belonging to Comparative Philo-
logy in general rather than to special
Lexicography.]

Bo-tree. *s.* [Indian.] See extract.

To this genus belongs the sacred *Bo-tree* of the Buddhists, *Ficus religiosa*, which is planted close to every temple, and attracts almost as much veneration as the statue of the god himself. Board. *s.* [A.S. *bord.*—*Bord* is a German word; but it was taken up in the French, whence it reached England as an Anglo-Norman one. Hence, it is difficult to give the exact details of all its derivatives. As a general rule, it may be laid down that it is a word of Anglo-Saxon origin, when it means *piece of wood, table*, and the like; of Anglo-Norman when the notion of *side* prevails. It is certainly Anglo-Norman when, as a verb, it can be rendered by *accost*.]

1. Piece of wood of greater length and breadth than thickness.

With the saw they sundred trees in boards and planks.—*Sir W. Raleigh.*
Go now, go trust the wind's uncertain breath, Remove'd four fingers from approaching death; Or seven at most when thickest is the board. —*Dryden.*

Bookbinding is the art of sewing together the sheets of a book, and securing them with a back and side boards.—*Ore, Dictionary of Arts, Manufactures, and Mines*, voc. *Bookbinding*.

In old libraries cloth-covered boards may, indeed, occasionally be seen; but they have the meanest aspect. . . . This new style of binding [in embossed cloth] is distinguished not more for durability, elegance, and variety, than for economy and despatch. For example, should a house in this line receive volumes upon Monday morning, they can have them all ready for publication within the incredibly short period of two days; being far sooner than they could have rudely boarded them upon the former plan.—*Ibid., Cloth Binding.*

I shall give what assistance I can in the business concerning hawks. In the meantime you may peruse Latham's Falconry, whose descriptions are true, though not quite so full as you may expect. There are, besides these that are mentioned in the common books, a *boccarell* and a *boccarel*, the which though I have often seen, yet I did not observe them so well as to describe them exactly. They are the names of the male and female. Bodily. adv. [This is a member of an inconvenient class of words.

They are compounds, rather than derivatives; inasmuch as -ly, though changed in form, is (like the -ric in Bishopric) a separate independent word. It is like; the German forms being *lich*, and in some dialects and stages of language *lih*. To add -ly to a substantive makes an adjective; as *man-ly* = *like a man*, from *man*. To add it to an adjective makes an adverb; as *gai-ly* = *in a gay manner*, from *gay*. But what if the adjective already end in -ly?

We can scarcely add a second identical element. We sometimes, no doubt, hear the term *gentlemanly like*; but only to condemn it. Yet few words are more needed than the adverb in -ly from the adjective *daily*: for we cannot well say either 'give us *daily* our *daily* bread,' or 'give us *dailyly* our *daily* bread.' We, doubtless, in practice, avoid the use of such words by circumlocutions. As an etymological fiction, though only as such, it is perhaps best, when we find the word, to treat it as a neuter of the adjective used adverbially.

That such is the habit of the Latin and Greek languages we know. We also know that, as the Anglo-Saxon adjective was declined and had a neuter form, the doctrine that an adverb in syntax may be a *virtual* adjective in the way of etymology is tenable.] Corporeally; conjointly with matter.

Bogy. s. [As the name of a bugbear, this word, with its congener Bogle, is generally derived from the British *bug*-fright. It is more probably a Slavonic word; neither is it foreign to the German of the Continent: it has, however, much the greatest currency in the Slavonic. How far it was originally common to the three languages; how far it is an ordinary, though not a common, German word; how far it came to us from the original Britons; and, finally, how far it may be deducible from more than one source, are questions that belong to the refinements of ethnographical philology, and questions upon which the opinions of authorities will vary according to their views of old relations among the Kelts, Slaves, and Germans. The present writer—who denies that before the time of Charlemagne there were any Germans to the east of the Elbe, who believes that at one time the Slaves reached the Teutobergerwald, who holds that in the south-west they were continuous with the Kelts of Gaul; and, finally, who thinks that when the Germans encroached on Slavonic ground they mixed their blood, and took many Slavonic words into their language—deals with it simply as a Slavonic term. In the Slavonic languages of the Pagan period, the ordinary word for deity was *Bog*. The good deity, was *Bielebog*—white deity. The bad deity was *Czernibog*=black deity. At present *Bog* is the name for the Christian God.

It is almost certainly the same word as *Puck*; perhaps the root of *Bacchus*. This latter hypothesis, however, assumes that the ancient Thracians were either Slaves, or something akin to them. If each doctrine be true, the geographical history of the word is curious. The Macedonian conquest of India either found it in, or carried it to, the Himalayas. Nearly two thousand years later it was adopted by Shakespeare; perhaps as the name of a goblin of the Avon and the Forest of Arden.

Equally curious is its history as a term, in respect to the nobility or ignobility of its application. In the Slavonic languages it is the name of the Supreme Being; in English that of a nauseous insect; for *bug*=the Latin *cimex* is a secondary sense of the term for goblin. See Bug; which is held to be the same word fundamentally; though it is by no means certain that they both came from the same language into our own.

In Jamieson's Scottish Dictionary the identical word is not found; though a quotation from one particular edition of Chaucer gives us *buggis*; a word which in others has *devils*, or some equivalent, instead. For this, also, see Bug.

In Grimm's German Mythology the word, so far as I can make a negative statement, is also wanting. *Puck*, however, appears in the form *Pûki*, i. e. with the final vowel sound which makes it a dissyllable.

The omission in Jamieson is, perhaps, due to the fact of the word having been thought rather another form of Bug, or a proper name; the latter omission suggesting a principle which ought to exclude it from the present work. What, however, is here written is written more to stimulate and to suggest an etymology, than to trace the subject in a purely lexicographical manner.

As far as my own experience founded on

BOHE

the nursery goes, the word *Bogy* is always a proper rather than a common name; often preceded by the adjective *old* = *Old Bogy*, just like *Old Nick*. *Bogy* means some goblin in particular; *Bug* applies to goblins in general.

And as a proper name for the Supreme Deity it is used at present in Slavonic: how generally may be seen from the following list:

Old Slavonic . . .	<i>Bog</i> .	Bulgarian . . .	<i>Bôg</i> .
Russian . . .	<i>Bog</i> .	Polish . . .	<i>Bôg</i> .
Illyrian . . .	<i>Bog</i> .	Bohemian . . .	<i>Buoh</i> .
Slovenian . . .	<i>Bog</i> .	Lusatian . . .	<i>Boh</i> .

The reader who goes with me thus far may, perhaps, hesitate at going farther, and holding that the German *bock*, English *buck* (oftener *he, tom*, or some other word expressing male), so often associated with *black* as a colour, and applied to the animal with which witches and wizards are supposed to be familiar (*black he-goat, black ram, black tom-cat, &c.*), originally meant the *black Bog, or Bogy*.

If this be the case the *black bock*, or *buck*, is the *Czerni-bog* = *Black Bog*, half translated.

Even the *broomstick* of the witches may have the same origin; since *buk* is the Slavic for a wisp or tuft, such as there is at the end of a besom.

Etymologically, the notice of *Bug* is the complement to these remarks. Ethnographically, however, or as points connected with the extent to which we have Slavic elements in both the English language and the English mythological Pantheon, Pilli-cock and [Old] Scratch may be consulted.]

Frightful spectre; nursery phantom.

The child believes without mental reservation; he does not require to be convinced; and, even if, now and then, some little struggling dawn of argumentative scepticism leads him to doubt faintly, and ask how *bogy* can always manage to live in the coal-cellar among the coals; how the black dog can be on his shoulder when he sees no dog there; why little boys should not ask questions; and why the doctor should have brought baby with him under his cloak—he is easily silenced by the reply that good children always believe what is told them; and that he must believe: so he does believe.—*Sala, Dutch Pictures, Little Children*.

Boll. s. [Lat. *bolla*.] Measure so called.

Of good barley put eight *boles*, that is, about six
English quarters, in a stone trough.—*Mortimer*.

Bólléd. part. adj. [I give the following
details as to the history of this word.

1. There is the Anglo-Saxon verb *belgan*,
of which the ordinary participle is *ge-belgen*.
The preterite, however, is *bealk*; a form
which makes the softening down of the *g*,
in some such hypothetical participle as
gebealthen, probable.

2. The meaning of the Anglo-Saxon is
be angry; the notion of *anger* and *swelling*
being closely allied.

3. In the early English writers we find,
amongst others, the following forms.

a. First and most important the partici-
ple in -n; form for form the same as
swollen, and the same in sense.

'His body was to *bolnen* from wrath that he boot
his lips.' (Langlande, Vision of Piers Plowman.)

The gost it seyde Bode, be stille!
Who hath lered thee all this wite?

That givest me these wordes grille,
That bet thes *bolnen* as a bite.

(W. Mapes, Debate of the Body and
the Soul, app. p. 334. Wright.)

'Ghe ben *bolnen* with pride.' (Wycliffe, 1 Co.,
rinthians, ch. v. Rich.)

'Drawn at a cart as he of late had be,
Distained with bloody dust, whoes feet were
bolning

With thestreight cordes wherwith they him haled.'

(Surrey, Aeneis, b. ii. Rich.)

'Here one man's hand lean'd on another's head—
Here one, being thron'd, bears back, all *boln* and
red.'

(Shakespeare, Rape of Lucrece.)

b. The derived neuter verb *bolnen* =
swell.

'And thus I live loveless like a luthen dog
That all my body *bolneth* for bitter of my gall.'

(Langlande, Vision of Piers Plowman.)

c. The derived substantive *bolning*, *bol-
nung*, *bolnyng*.

'Lest peraventure, stryuyngis, enuyes, sturde-
nesses, dissencounes, and detracounis, priuy
speeches of discord, *bolnyngis* bi pride, debates
ben among ghen.' (Wycliffe, Galatians, xii. Rich.)

d. Lastly comes the familiar quotation
from the Old Testament concerning the
flax:

'And the flax and the barley was smitten: for
the barley was in the ear, and the flax was *bolled*.'
(Exodus, ix. 31.)

The Scotch gives us a similar series of
forms; concerning which it must be re-
marked that it is only the oldest (those
from Henryson, a writer of the fifteenth
century) which furnish the analogues of
the earlier English ones, i.e. the ones
without -d.

'Alecte is the *bolnyng* of the hert;
Megera is the wikked word outwert;
Thesiphone is operatioun
That maketh final execution
Of dedly syn.' (Henryson.)

Of the later ones, too, it is only the oldest
that give us the *l*, the sound of that letter
being softened down into *au*.

The wyndis welteris the se continually;
The huge wallis *boldynys* apoun loft.'

(Gawine Douglas, Transl. of Aeneid.)

'For joy the birdes with *bolden* throats
Agains his visage shein,

Takes up their kindlie music notes
In woods and gardens grein.' (Hume.)

'And will and wilson was she, and her breast
With wae was *bowden* and just like to birst.'

(Ross.)

All from Jamieson.

BOLL

Putting all this together the conclusion
I have come to is:

1. That a word so common in the old
English is not likely to have been wholly
wanting in the Anglo-Saxon; the word
being assumed to be English. It was, as-
suredly not Anglo-Norman; nor was it,
apparently, introduced from either Ger-
many or Scandinavia. On its connection
with the Latin *bull* a remark will soon
be made.

2. That its Anglo-Saxon original was
baelgan.

3. That the sense of this word in the
classical Anglo-Saxon (where, as has been
stated it meant *be angry*) was secondary;
instances of its meaning simply *swell* being
wanting, unknown to the present writer,
or current in some dialect other than that
of the classical Anglo-Saxon.

4. That out of some such participle as
gebealthen we have got the Old English
boln; just as we have got *swoln*, from
swollen, *swoll*, *swell*.

I now submit that it is possible that, the
n being lost (as in *broke* for *broken*, and,
occasionally, *swoll* for *swoln*, or *swollen*),
the remainder *boll-* took the guise of a
radical verb.

Such is one view. But it is more likely
that a verb was deduced from the noun
Boll, and that the participial adjective
was evolved.

Hence *bolled* = with a *boll*; a word which
takes the guise of a participle, not because
there is such a verb as *Boll* (which, if it
occurred in a late writer, I should treat as
a secondary form from *bolled*), but simply
because its form is participial. Upon this,
however, more is to be found in the Pre-
liminary Remarks.

Nevertheless the etymological necessity
for a form like *boll*, a form which stands to
boln as *swell* stands to *swoln*, must be re-
cognized. That *swell* gives, as participles,
both *swelled* and *swollen* is true; but the
analogue to *swelled* would be *belled*. Neither
is there the other analogue, from *swell*, to
bol; there being, at present, no known in-
stance of *swol*. The nearest is the German
geschwulst, with which compare *Bolster*.

Of *Boll*, the substantive, recent exam-
ples, doubtless, exist. In Old English, how-
ever, it is generally used as the second
element in a compound. Its commonest
complement is *throat*. In a vocabulary
published by Mr. Wright, and referred by
him to the eleventh century, we find '*Gur-
gulio*, prot-*bolla*.' Again,

'And by the *throat-bolle* he caught Alein.'

(Chaucer, Wedg.)

'A captain—which with a leaden sword would
cut his own *throt-bolle*.' (Hall in Richardson,
Wedg.)

'After that one of them toke his brother from
under the bedstede, and hyld his face downe to the
grounde with his one hande, and with the other
hande cut his throte *bolle* a sonder with a dagger.'

(Rastell, Pastime of the People, Edward V., p.
292. Dibdin.)

The larynx, or Adam's apple, rather than
the windpipe, is here meant.

For *Cromboll*, see that word.

Bole = trunk of a tree is probably the
same word. Trunks, however, of trees
are characterized by being straight or ta-
pering, rather than swelling. They swell,
however, as they rise out of the ground,
and they swell where they give off the
branches. Thirdly, their roots, by dis-
placing the earth in which they stand, throw
up a swelling round their standing-place.

BOLS

On the principle of the part standing for the whole, any one of these facts may give us a reason why *bole* = trunk.

If so, the better spelling would be *Boll*: the final -e suggesting either that the word was an Anglo-Saxon dissyllable, which it was not; or an Anglo-Norman one, which, also, it was not. To spell it without the e would only be to return to the old orthography. As it is, nothing is gained, even on the score of convenience. If the e final distinguishes *bole* = trunk from *boll* = head of flax, it assimilates it to a much more different word *bole* = earth.

The word is probably obsolete, being displaced by *trunk*. As a provincialism it may be current: but, as employed by recent writers, it is used rhetorically; i. e. either as an archaism, or as a rare form.

Mr. Wedgwood connects *bole* = trunk of tree and *boll* = head of flax, making them words of the same origin with Boil, Bubble, and the Latin *Bulla*.

There is nothing in this incompatible with the view just exhibited. The real difference lies in the fact of Mr. Wedgwood's being the ultimate, the one submitted to the reader the immediate, origin of the word. *Bolster* he connects somewhat less closely than I do.

Bolled is sometimes applied to barley; but not to beane, to oats or wheat. Yet the barley is not *bolled* like the flax. Hence, the word may simply mean strong, or well-grown. Two facts may suggest this application to that particular kind of corn.

1. The measuring of barley by the *bol*.
2. The name *bigg* applied to the same kind of grain.

Probably, the word is used without any clear notion as to whether *Bold* = Lat. *audax*, or *Bolled* = Lat. *capitatus*, be meant.

Belly is probably connected with this root. At any rate the similar relation of *swallow* = throat (perhaps originally the larynx) to *swell* deserves consideration.

Bolt in both its senses may also have a similar connection. This, however, assumes that the conception of the resistance which accompanies protrusion, and which in so doing would cause a swelling where the parts before gave way to the object behind, lies at the bottom of the word. The immediate origin of the two terms is different; nor is this anything more than the suggestion of a link which would connect a large family of words.]

Bólter. v. a. [This word forms the second element in *blood-boltered*, a term already noticed, and which can only be interpreted by allowing it to stand for some image allied to those created by such epithets as *blood-besmeared*, *blood-sized* (in the sense of *stiffened*), or the like. As a compound of *boltered*, that word retaining its natural meaning, it is impossible. The only thing that can be said to be *blood-boltered*, i. e. sifted or refined through blood, is a very different object from the murdered Banquo. Sugar, refined by bullock's blood may, perhaps, be said to be *blood-boltered*; few things else.

This statement may be tried by the obvious test of putting some word which will give an unequivocal and undoubted meaning in the place of each element. For *blood*, write some prefix, which followed by *bolter*, will give a sense e. g. *cloth*, *baize*. *Cloth-boltered*, or *baize-boltered*, means *boltered* through *cloth* or *baize*; *cloth* or *baize* being the *bolter*. *Canvass-boltered* = *boltered* through *canvass*.

Again, for *boltered* write *sifted* (or *sifted*), *strained* (or *strained*), or *filtered*, and the sense is *sifted* (or *sifted*), *strained* (or *strained*), or *filtered* through *blood*. The etymological rule is exactly that of the words in question, especially *sifter* and *strainer*, which stand to *sift* and *strain* precisely as *boulter* does to *bolt*, and with meaning closely allied.

Warburton, and all Malone's predecessors, had, according to Malone's note, explained the term as meaning that Banquo was covered with blood which had gone out from his body as from a sieve; an explanation with which he was reasonably dissatisfied.

His researches led him to seek the meaning among the provincialisms of Shakespeare's native county; and he gives the result in the following words. 'I ordered,' says my informant, 'a harness-collar to be made with a linen lining, but blacked, to give the appearance of leather. The saddler made the lining as he was di-

rected, but did not black it, saying it would *bolter* the horse. Being asked what he meant by *bolter*, he replied, *dirty*, *besmeared*; and that it was a common word in his country. This conversation passed within eight miles of Stratford on Avon.'

Stevens adopting this view confirms it. He gives the name of his authority, a Mr. Homer. He adds that the hair matted with the blood of a broken head was said to be *boltered*; also, that the pronunciation of the word was *baltered*.

Unfortunately this is a pronunciation addressed to the eye only. How are we to know whether the *a* was sounded as in *malt*, or as in *callous*? The orthography of the literary language is in favour of the former sound; but here we deal with a provincialism. The sound may have been that of the *a* in *callous*; for we must remember that, if it were such, there is no other way of saying so than in the necessarily ambiguous words of our commentator.

Lastly, he gives the following extract from the famous translator Philemon Holland; to which he might have added that though Fuller, our authority, especially states that he could not give his birthplace, he as especially declares that he practised as a physician in Coventry.

'Moreover, Arabia doth glory even yet in their ladanum. The goats, they say, use to crop the sprouts and sprigs of this plant which beareth masticke, which being so full of this odoriferous and sweet liquor, that they smell again, and doth drop and destill the said moisture, which the shrewd and unhappy beast catcheth among the shag long haire of his beard. Now, by reason that dust getteth among, it *baltereth* [i. e. *nerari in orig.*] and dultereth into knots and balls, and so is concocted into a certain substance in the sunne.' (Pliny, Natural History, b. xii. ch. xvii. p. 370: ed. 1635.)

Now, I submit that all this is not so much explaining *blood-boltered* as giving reasons for considering the word to have been *blood-battered*. The text, however, stood and stands; and though the explanations founded on the word *bolter* are objected to, the question whether that word is not at the bottom of the compound is neither expressly asserted nor expressly denied. It is clear, however, that the more we explain the Shakespearean *boltered* by the Warwickshire *baltered*, the less we connect it with *bolt* in the sense given to it by the miller.

We now come to a writer who has noticed the term within the last twelve months. Mr. Wise, in his work on Stratford on Avon, gives in an appendix a list of Shakespearean words, provincial in Warwickshire. In this list neither *boulter* nor *balter* occurs. In the body of the work, however, he notices *balter*, the term in question. He quotes it as a Northamptonshire word given by Miss Baker, in her Glossary of Northamptonshire words, to Warwickshire; stating that it applies to snow *balling* in horses' feet. This suggests a new etymon, and in my mind the true one. What may be the case in other districts, and with other words, I know not; but in Lincolnshire, and doubtless elsewhere, it is common to say *shatter* for *shallow*.

I believe, then, the Warwickshire word to have originated in *ball*, and to have meant *balled*, *clogged*, or *matted*.

Whether the text should be altered, and whether actors should say *baltered* (pronounced *hawltered*), are other questions. I scarcely believe that Shakespeare himself wrote otherwise than as the common text

makes him write. The word is sonorous, and conveys an image which, though no two readers exactly agree as to what it is, is still, when realized according to the reader's view, a definite image. What Shakespeare really meant is an insoluble point of biography.

An object *matted*, *clogged*, *sized*, or *stiffened* with blood was visible to the poet's eye. The provincialism was, probably, in his mind; but so was the word *boulter* with its ordinary meaning.

All that a lexicographer can say is that the word is not a grammatical derivative from *bolt* or *bolter*.

I conclude with a remark on the spelling. It would be convenient if *bolt* = sift were spelt differently from *bolt* = arrow, &c.; and it is a fact that *boulter* is a common way of spelling it. Still, as it stands, it is spelt phonetically right.

Again, the oldest spelling was with a simple *u*, as may be seen in the following gloss from Alexander de Neckham

E de farine vent la flour,
bolting-clot
Par la bolenge le pestour,
bolting
Per bolenger est ceveré
brun
La flour, e le furre demore.
(Vocabularies, p. 106. Wright.)

But the pronunciation in *u* has long been lost.

The word then is left as it is. To recur to *boulter* would be to run the risk of having the vowel sounded like the *ow* in *howl*.]

(For example see extract under *blood-boltered*.)

mortars on the arsenal, firing over both fleets.—

N. viii. 16*. The doubling of the *s* is recent and incorrect. In Nemnich the word is given in both the English and the French vocabularies, and that with a single *s*, i. e. as *bonasus* and *bonase*; and the spelling in the Encyclopædias is the same.

About forty years ago an American bison, which thoroughly verified the character given below in the second extract, was brought over to England. The want of colour relates to the comparatively small proportion of red blood circulated through the muscular system, and the smaller proportion of red particles in the blood of fishes: the exceptions cited seem to depend on increased circulation with great energy of action; and, in the bonito and tunny, with a greater quantity of blood and a higher temperature than in other fishes.—Owen, Anatomy of Vertebrates, p. 215.

Of rarer fish the bonito and the tunny are seen in the market from time to time, and even the salmon is an occasional visitor.—Ansted, The Channel Islands, p. 213.

He fell dead, and was buried in the moor.—Macaulay, History of England, ch. iv.

Shakespeare, Cymbeline, iii. 3.
The good old way among the gentry of England,
to maintain their pre-eminence over the lower rank,
was by their bounty, munificence, and hospitality;

is supported by the credit of the trader. This is
what my correspondent pretends to prove out of his
own books, and those of his whole neighbourhood.—
Tatler, no. 180.

What if at a later period, with a brain for calculation which none can rival, I invariably succeeded

Craik, History of English Literature, i. 191.

Book-learned. part. pref. (notwithstanding the extract from Dryden, the prose

the following extract; it may, of course, be used generally).

In graver writers one has often read
What in excuse of *bookworship* is said;
'It is not ink and letter that we own
To be divine, but scripture sense alone;
We have the rule which the Apostles made
And no occasion for immediate aid.'

Byron, Letters, 4.

Bookcase. s. [book and case.—Remark, in this word, the fact of a true doubling of the consonant; the k-sound being indicated by c. This is because the second element in the compound begins with the sound with which the first ends. It is only in such cases that we have, in English, true doublings. In words like *pitted*, *merry*, &c., there is a mere orthographical expedient; the consonant being doubled in order to show that the vowel which precedes it is short.] Case for holding books.

It was not till more than a hundred years after the
invention of printing that a single printing press
had been introduced into the Russian empire; and

priests. Even in the seventeenth century the library
of a prelate of the first dignity consisted of a few
manuscripts. Those manuscripts too were in long
rolls: for the art of *bookbinding* was unknown.—
Macaulay, History of England, ch. xxiii.

bookishness keepeth them?—*Whitlock, Manners of
the English*, p. 180.

Bookkeeper. s. One who keeps books of account: (used, however, more generally and of a greater variety of occupations than *bookkeeping* in the strict mercantile sense. A bookkeeper at a coach-office

Bookkeeping. s.

Art of keeping accounts. *Bookkeeping* is the art of keeping books of account, whether in public offices, manufacturing establishments, or mercantile counting-houses; but the name is generally applied to the books of merchants, on account of the complexity of their transactions. It was accordingly among merchants, and in particular among those of Venice, Genoa, and Pisa, and other trading towns of modern Italy, that *bookkeeping* was first reduced to a system, and the remarkable refinement of double entry was adopted.—*Encyclopædia Britannica.*

Bookland. s.

[A.S. *bōcland*.] Charter-land, held by deed under certain rents and services. I applied to my communicative friend Dick Ivy, who gave me to understand, that most of them were, or had been, undertrappers, or journeymen, to more creditable authors, for whom they translated, collated, and compiled, in the business of *book-making*, and that all of them had, at different times, laboured in the service of our landlord.—*Smollett, Expedition of Humphry Clinker.*

I have been toiling and molling lately, for a purpose, among dusty old *bookstall* treasures, and assiduously collecting as many tattered, dog-eared, once calf-bound volumes as I could find of the British Essayists of the eighteenth century.—*Sala, Secret of Muley Mograbbin Beg.*

Booktrade. s.

Trade in books. The modern *book-trade* dates from the discovery of the art of printing. The principal localities of the *book-trade* are London, Edinburgh, Dublin, Oxford, Cambridge, and Glasgow. L. Bulwer, Pelham*, ch. xxxviii.

The Gardes Françaises like it not, but have to persevere. All day it continues, slackening and rallying: the sun is sinking, and Saint-Antoine has not yielded. In the following extract it governs it, and is so far a verb active; a view favoured by the similar construction of *chant* in the preceding line. Yet, in other respects, the verb is neuter. Hence, the construction may be that of *go* in 'he goes it.'
Philomel chants it whilst it bleeds,
The bittern booms it in the reeds.

Cotton, Night Quatrains, (Rich.)

Boomerang. s.

[Australian.] See extract. The boomerang is a puzzle, and even mathematicians cannot comprehend the law of its actions. It is a piece of curved hard wood, in the form nearly of a parabola; it is from thirty to forty inches long, about three inches broad, pointed at both ends, the concave part a quarter of an inch thick, and the convex quite sharp. The mode of using it is as singular as the weapon. Ask a black to throw it so that it may fall at his feet, and away goes the boomerang for forty yards before him, skimming along the surface at three or four feet from the ground, when

BOON

BOON

it will suddenly rise into the air for fifty or sixty feet, describing a curve, and finally drop at the feet of the thrower.—*G. Butler Earp, Gold Colonies of Australia*, p. 126.

Boon. s.

[certainly from A.S. *bén*, in the Northumbrian dialect *boén*.] Prayer; petition; request. In that morning fell a mist,
And when our Englishmen it wist,
It changed all their cheer;
Our king unto God made his boon,
And God sent him full comfort soon,
The weaker wex full clearer.

Poems of Laurence Minot.

Boon. s. [probably from the A.S. *bén*, as above.—These words are entered separately, because it is not quite certain that, in all the cases where the one under notice is found in modern authors, it is from the same origin as the preceding. It may be from *bon*, *bonus*, or *bonum*; and, in such expressions as *given* or *granted* as a *boon*, this origin suits best. In combination with *obtain*, *gain*, and the like, it is transitional in meaning. Between the two there are numerous intermediate imports.] Benefit; gift; free gift; gain.

Vouchsafe me for my need but one fair look;
A smaller *boon* than this I cannot beg,
And less than this, I'm sure, you cannot give.

What rhetorick didst thou use,
To gain this mighty *boon*? she plies me!

Addison, Cato.
You may not be aware of it yourself, most reverend Abraham, but you deny their freedom to the Catholics upon the same principle that Sarah your wife refuses to give the receipt for a ham or a gooseberry dumpling; she values her receipts, not because they secure her a certain flavour, but because they remind her that her neighbours want it.—a feeling laughable in a priestess, shameful in a priest; venial when it withholds the blessings of a ham, tyrannical and execrable when it narrows the boom of religious freedom.—*Sidney Smith, Peter Plymley's Letters*, let. 2.

Is this the duty of rulers? Are men in such stations to give all that may be asked, and only to give because of the asking, without regarding whether it be a *boon* or a bane?—*Lord Brougham, Historical Sketches of the Statesmen of the Reign of George III.*, Lord North.

Such *boon* from me,
From me heaven's queen, Paris, to thee king-born,
A shepherd all thy life but yet king-born,
Should come most welcome. *Tennyson, Enone.*

Boon. s.

[?] See extract. The operations next performed upon the flax will be understood by attending to the structure of the stem. In it two principal parts are to be distinguished; the woody heart or *boom*, and the harl (covered outwardly with a fine cuticle), which encloses the former like a tube consisting of parallel lines. The breaking is performed by an instrument called a *brake*. In order to give the wood, or *boom*, such a degree of brittleness as to make it part readily from the harl, whereby the execution of this process is rendered easy, the flax should be well dried in the sun, or, what is more suitable to the late period of the year, in a stove. Such is often attached to the bakers' ovens in Germany, and other flax-growing countries.—*Ure, Dictionary of Arts, Manufactures, and Mines*, voc. *Flax*.

The heel was then firmly taken hold off by this same *catcher*, who, being gradually protruded from behind by the other leg of the wearer, drew off the boot, partly by moving forwards, and partly by rising up. The operation was then repeated for the other foot.

The exact details of the changes by which Bootjack and Jack Boots grew out of the original elements *boot* and *catcher* I am unable to give: the similarity of the sounds *jack* and *catch* had, doubtless, much to do in determining the form *Bootjack*; so had the term *Jack Boot* as applied to the boot itself.] Servant at an inn whose business it was to pull off the boots of the guests.

This remarkable freedom from *bore*s was produced in Lamb's circle by the authoritative texture of its commanding minds; in Lord Holland's, by the more direct and more genial influence of the hostess, which checked that tenacity of subject and opinion which sometimes broke the charm of Lamb's parties by 'a duel in the form of a debate.'—*Talfourd, Memoirs of C. Lamb*.

b. Applied to things.

It should be remembered, that if an inference be thence drawn of the uselessness of being thus provided with names, we must admit, by parity of reasoning, that it would be no inconvenience to a carpenter, or any other mechanic, to have no names for the several operations of sawing, planing, boring, &c., in which he is habitually engaged, or for the tools with which he performs them.—*B. Whateley, Elements of Rhetoric*, introd.

Some *botanical* critics tell us, the poets have not rightly followed the traditions of antiquity, in meta-

It has repeatedly occurred in the progress of natural history, that good systems did not take root, or produce any lasting effect among naturalists, because they were not accompanied by a corresponding nomenclature. Botany. s. Science of plants; that part of natural history which relates to vegetables.

The way in which the idea of likeness has been applied, so as to lead to the construction of a science, is best seen in *Botany*: for, in the classification of Animals, we are inevitably guided by a consideration of the function of parts; that is, by an idea of purpose, and not of likeness merely: and in Mineralogy, the attempts at classification on the principles of Natural History have been hitherto very imperfectly successful. But in *Botany* we have an example of a branch of knowledge in which systematic classification has been effected with great beauty and advantage.—*Whewell, History of Scientific Ideas*, v. viii. ch. ii.

Songs and Carols from a MS. of the 15th Century, p. 24. (Wright.)

Both. pron. The combination *ba twá* = both two is found in Anglo-Saxon.

Upon the strength of this, the word has, not unreasonably, been dealt with as a composition consisting of those two elements. Nevertheless, there is an objection, which has been pointed out by Mr. Garnett, viz. the existence of the German *beide*. Notwithstanding this, it is almost certain that, in some shape or other, the *th* is, in reality, the *t* in *two*.

The word, though often treated as an adjective, is really a pronoun. It is this, whether we view it logically or in respect to its construction. Logically, it expresses the attribute of Quantity rather than Quality in the limited sense of the term; and, though it may not be a numeral exactly after the manner of *two*, *three*, and the like, it is still more of a numeral than ought else. It applies to two objects; but not as *two* applies. *Two* denotes more than one and less than three, as compared with

one and three; to which two numbers it has a definite relation, and in this relation it is considered. *Both* applies to two objects considered only as members of a pair, and without any reference to either one or three as separate numbers. It applies to objects which, having been separated, may be taken together as one; and it means that the two are actually so taken.

The construction of this word is exactly that of *these* or *those*, except that, as may be seen by the next entry, *both* is an adverb as well as a pronoun.

Both, in respect to number, is not only a dual, but a natural dual. It cannot be singular, and in languages where there is a dual at all, it is just the word which would give that number rather than the plural. Hence, there are cases where the dual number, wanting in other words, may be found in this one only, or in this word only and *two*. Such is the case with the Latin; where *ambo* and *duo* give the only instances of a dual number. This leads us to an analysis of the word, so that we ask whether some part of it may not be a sign of number, rather than a part of the original word, or in other words, whether it may not be inflectional rather than radical.

For *both*, as it now stands, our answer is already to some extent given. The *th* is no part of the root. The A.S. *bá* tells us this; so that, even if the objection founded on the form *beide* be valid, all that it denies is that the element *th* does not originate in the numeral *two*. That it is a superadded element of some sort or other it admits.

Assuming, however, that it really does represent *two*, can we call it the sign of a dual number? In Anglo-Saxon the pronouns of the first and second persons, when applied to two individuals, were *wit* and *git*. They are, generally, like *vāi* and *opōi* in Greek, treated as duals; but, at the same time, they are as generally admitted to be compounds of *we* and *ye* + *two*. As they cannot be got from *I* and *thou*, they must be looked on as duals formed from plurals, and, as such, curious and suggestive forms.

Whether such decided compounds as these should be treated as *inflections* is another question. That *all* inflection has its remote origin in composition is a reasonable and current doctrine in Philology. Abbreviations, however, of *we two* and *ye two* are scarcely dual numbers in the ordinary sense of the term. They are rather to be compared with the *nos otros* (*we others*) of the Spanish and certain allied forms of speech.

Subject, however, to this objection, *both* may be called as good a dual as the extinct, though Anglo-Saxon, forms *wit* and *git*; except that it was derived from a plural.

Having thus disposed of the *th* we come to the simpler form *bá*. But, even here, the question repeats itself. Of even this elementary form, of *ba* itself, we may ask whether it was not dual rather than radical; in other words, whether the *a* was not a sign of number rather than a part of the original root.

The *á* was sounded as the *aw* in *bawl*, i. e. as *o*; and this sound appears equally in the Greek and Latin, *ἄμφω* and *ἄμω*, *ambo* and *duo*; in each of which the final *o* has a fair claim to be treated as the sign of the dual number, rather than as the original vowel of the root.

BOTH

In the first place, *δύο* or *duo*, like *τρία* or *tres*, is one of those numerals which are declined. Secondly, the vowel *ω* is the ordinary sign of the dual number, not only in substantives like *λόγῳ*, &c., but in pronouns like *τῷ*, *ῷ*, *σφῷ*, *ῷ*. All this looks as if the Greek *ω* (*o*), the Latin *o*, and the Anglo-Saxon *ā*, were inflectional rather than radical.

The fact, however, of the words being natural duals, and as such incapable of taking a singular, and not likely to take a plural form, traverses this view; or rather reduces the question as to what the final vowel really is to a mere matter of names; since the radical vowel and the inflectional termination may have been identical. Be this as it may, we shall do well to remember that the *o* in *both*, is the *ā* in the A.S. *bā*, the *ω* in *ἀμφω* and *ambo*, and the *ω* (*o*) and *o* in *δύο*, *δύο*, and *duo*; and that *ω* is the sign of the dual in many Greek words where its inflectional character is undoubted.

The *b* is the *b* in the Latin *ambo*, and the Greek *ἀμφω*. Such, at least, is the broad and practical view of its relations. As, however, it is not impossible that it may represent the *m* of those words, this second view is suggested as a refinement.

Presuming that the Lithuanian and Slavonic forms are, respectively, *abbi-dewi* and *oba-dwa*=the A.S. *bā-twā*, and the Italian *ambe-due*, I draw attention to the relation, in Greek, between *ἀμφω*=*both*, pronoun, and *ἀμφι*=*around*, *about*, the adverb or preposition. In *sense* they are decidedly connected; the sequence of ideas in (1) *around*, *about*, *roundabout*, (2) *on each hand*, (3) *comprehension*, and (4) *both*, being one which few will deny.

Ἀμφι, also, is apparently the older form.

Ἀμφι, however, is no simple word, but the root *ἀμ*+the affix *φι*, which is, itself, the *-φι* in *νόσφι*, *νόσφι*, and a few other words; and in Greek the recognized equivalent of the Latin *-bi*, in plural datives like *lapid-i-bus*, &c.

If this be true, the *b*, itself, united as it is, is scarcely radical.

Returning to our own language, we find that in Anglo-Saxon the preposition or adverb which corresponded with the Greek *ἀμφι* was *ymbe*, a compound of *um* and *be*. Of these two elements, the former, though belonging to a class of words which are usually remarkable for their persistence, is obsolete; though common in the allied languages, and not wholly unknown in the penultimate stage of our own. In the old northern English it was common; a single work (the Northumbrian Psalter) giving *umbe*=*around*; *umbestonde*=*formerly*; *umbehwile*=*at times*; *umbestand*=*surround*; *umbeyeden*=*surrounded*; *umgang*=*circuit*; *umgive*=*surround*; *umgo*=*go round*; *umgripe*=*embrace*; *umhkip*=*embrace*; *umlap*=*lap round*; *umlock*=*clasp*; *umset*=*surround*; *umshadow*=*overshadow*; *umstanding*=*circumstance*; *untipped*=*dressed*: all of which are to be found in Mr. Herbert Coleridge's Glossarial Index.

The details, however, of the relations between the Anglo-Saxon *ymbe* and the word *both* are uncertain, and the drift of the present notice is to show that the original form of the word was, probably, *ymbetwā*; a triple compound, containing the same elements as the Italian *ambe-due*,

BOTH

the Slavonic *oba-dwa*, and the Lithuanian *abbi-dewi*.

In the first of the following extracts we have the addition of *two* as a separate word. This is not uncommon in the older English. If the preceding view be accurate, it gives us a pleonastic expression; or, (*bā*+*two*)+*two*; i.e. the element *two* twice over.

And whence the blind lat the blinde,
In dike be fallen *bothe* two. *Debate of the Body and Soul*, in *Poems attributed to W. Mages*, app. p. 335. (Wright.)

Moses and the prophets, Christ and his apostles, were in their times all preachers of God's truth; some by word, some by writing, some by *both*. — *Hooker, Ecclesiastical Polity*, v. § 19.

As therefore *both* are equal in degree,
The lot of *both* he left to destiny. *Dryden*.

A Venus and a Helen have been seen,
Both perjurd wives, the goddess and the queen. *Graville*.

Both, *adv.* In being used not only as a pronoun, but as some other part of speech, *both* agrees with three other words, all of which (like *both* itself) convey the notion of a natural dual. These three words are *either*, *whether*, and *neither*.

In this lies the excuse for the length of the forthcoming remarks; remarks which go beyond the particular word under notice, and which, saving criticism elsewhere, explain the nature of the others.

The class to which these words belong, as Parts of Speech, is by no means universally admitted. That they are something else as well as pronouns is beyond doubt. It has been doubted, however, whether they are adverbs or conjunctions. The natural duality of their import is at the bottom of this uncertainty.

Whenever any one of the words under notice occurs, there are two terms in either the clause which precedes or the clause which follows it, i.e. in either the subject or the predicate of the proposition.

Now two terms in the same part of a proposition, provided they are connected by a true conjunction, give with few and unimportant exceptions two propositions; and wherever there are two propositions, the word that connects them is either a relative pronoun or a conjunction; as,

The man is coming to-day

who

Was here yesterday;

or—

The day is warm

because

The sun shines;

where *because* is a conjunction rather than an adverb.

In sentences like

The sun and moon shine,

or—

The sun shines and warms us,

the principle is the same; though the details are different. Though there is but a single sentence, there are, in reality, two propositions, i.e.

The sun shines

and

The moon shines,

or—

The sun shines

and

The sun warms us.

The compendium by which these are thrown into the ordinary form of an

BOTH

apparently single proposition is easily analyzed.

Whenever we use *both* we use *and*; and whenever we use *either* or *whether* we use *or* after it. After *neither* we use *nor*, which is merely *or* with a negative element prefixed. *And* is what is called a copulative, or what is called a disjunctive, conjunction; each being a conjunction of the most decided character. Are not, then, *both*, *either*, *whether*, and *neither*, as Parts of Speech, in the same category? The Latin language favours this view. There (where '*both* hope and reason,' and '*either* Cæsar or nothing,' are rendered by '*et spes et ratio*,' and '*aut Cæsar aut nullus*') the original word is repeated; implying that the place of *both* and *either* may be legitimately filled by a conjunction.

For all this *both* and *either* are adverbs: and so in the Latin (notwithstanding the identity of form), as translated in the only way possible for an Englishman to translate them, are *et* and *aut*.

And and *or* may be used without *both* and *either*. *Either*, *whether*, and *both*, however, cannot be used without *or* and *and*. Hence, it is clear that it is not these words which convey either the copula denoted by *and*, or the disjunction denoted by *or*. They are superadditions by which the copula or disjunction is strengthened or defined, but they are not the copulative nor the disjunctive itself. They convey the *mode* of the union or the disjunction; and doing this are adverbs rather than true conjunctions.

We might, if we chose, call them conjunctival adverbs; but, as they form but a small class, it is scarcely worth while introducing a new term.

The class, indeed, is in reality smaller than it appears to be; inasmuch as *either*, *whether*, and *neither* may be considered as one and the same word, used, with a slight modification, affirmatively, interrogatively, or negatively. Hence, the only adverbs under notice are the complements, or supplements, to *and* and *both*; the strengtheners or definers of the copula and the disjunctive. Yet even here there is a difference.

Either, ending in *-er*, belongs to a large class; a class containing comparative degrees like *wiser*, and adverbs of place like *upper* and *under*, along with other words of a less definite character. The notion at the bottom of these forms, as it has reasonably been argued by Bopp and others after him, is that of *one in two*; as conveyed in expressions like '*this is better than that*,' '*the upper and under sides*.'

In *either*, *whether*, and *neither*, the dual element is evident. In expressions like '*either go or stay*,' '*whether you will or not*,' and '*neither this nor that*,' the notion is that of an *alternative*. The dual element, here, is clear enough. There are two objects or acts under consideration. But as these are separated, and as a choice by which one is taken and one left is made, there are unity and duality combined. There are two things to choose from; only one to choose.

In *both* the case is different. The objects or acts are two; but there is no choice, no separation, no disjunction. There is, doubtless, a notion of unity, inasmuch as the two are treated as one, but this is a unity effected by comprehension, and not one resulting from separation.

Hence the words, though to a great extent words of the same import, are formed upon different principles, and terminate differently.

For further details concerning the import of these words see *Either*, *Whether*, *Each*, and *Any*; the latter word more especially to explain such exceptionable phrases as *on either side* = on each side = on both sides. The explanation of this lies in the fact of the notion of an alternative always being combined with the notion of indifference. As it is a matter of indifference which of two alternatives is taken, *both* are liable to be chosen. Hence, *either* may = *both*. But it does this indirectly and by implication; whereas *both* is direct, positive, and explicit.

When the word is a pronoun, and when it is an adverb, is often a matter of doubt. In such a sentence as 'you and I are both cold and wet,' nothing but a knowledge of the external circumstances can tell us to what *both* applies. If we heard the words *spoken*, the emphasis would help us; but in writing the import is ambiguous, the distribution (so to say) of the word *both* being equivocal. The rule that it is to be taken with the word which it immediately precedes is wholly inadequate.

As far as it goes the following rules are absolute; but it will not go far.

1. Where there are two nouns, each in the singular number, and but one verb, *both* is a pronoun, and is in apposition with them. 'The sun and moon are both heavenly bodies'; 'he and I are both going abroad,' &c.

2. Where there are two verbs, and only one noun, that noun being singular, *both* is an adverb; and may be periphrastically rendered by *in the way of a pair*, *brace*, *couple*, or *two objects taken together*. 'The sun both shines and warms'; 'he is both cold and hungry,' &c.

The principle of this is clear; and it is, evidently, comprehensive enough to make the foregoing rules unexceptionable. A word like *both* cannot apply to either a noun or a verb in the singular number.

The following extracts are given as they stand in the previous editions; yet the examples which they supply are by no means of the definite and decided kind just indicated. In the first and second there is a confusion between the members of two classes and the classes themselves. The Jews and Greeks, the quick and the dead, are not to be counted by *twos*, but by millions; so that it is not to them that *both* applies. The real dualism consists in the two classes which they respectively constituted. But this is not expressed; and the sentences are by no means easy to parse.

In the third extract *both* applies to two propositions of different structure; and the result is a very doubtful piece of English.

In the last, *both* is sufficiently adverbial, yet in a language where *morning* and *evening* were in (say) the ablative case (in which, as signifying parts of time, they might easily be), and *both* were declined, it is easy to see how this last word might agree with them.

general to a trestle or support upon which anything
rests, and to a coach-box in particular. See Crab,
